Creating Weapons	220

Chapter 8 - Misc Rules

Clarifying Rules	224
PTE Roadmap	226
Credits	228
Version Notes	229

What is PTE?

Pokemon Tabletop Evolution is intended to be a system built off of the **Pokemon Tabletop United (PTU)** system in a way that diverges from the video games and addresses a large portion of the flaws of PTU. Most comparatively, it is intended to be the same type of transition that PTU made from the framework of **Pokemon Tabletop Adventures (PTA)**, as inspiration and a framework but going our own direction.

Much like everyone who has played PTU for a suitable amount of time, the system's flaws are glaring but every attempt to address them has gone in their own direction, inspired by their own pool of knowledge. While that is valid, PTE is intended to be as much of a [Fan-Made] spiritual successor or sister branch as possible so that those who've played PTU can easily transition to something that shares a lot of the same concepts from it. Considering that the PTU system has been discontinued, PTE, by namesake, is the evolution of the system in a way that continues its legacy.

System Design Principles

1 - Pokemon Canon is ignored

Let's face it. Pokemon doesn't make the wisest decisions and translating them one to one into a tabletop setting is a recipe bound for disaster. Why does Sneasel not get any Ice moves it can use until Level 47 with Ice Shard? Sneasel is a late game encounter and they probably didn't care cause you could give it TMs anyway. Why are Attacks locked behind Egg Move Lists? To give trainers a reason to use the breeding mechanic. Why are there little to no Rock Type Attacks? No clue, I think they just had an identity crisis between Ground and Rock.

So basically, when we translate the Pokemon series into a tabletop genre, we will factor in what is fun for tabletop gameplay, not giving a Pokemon something because it does that in the games and using Gamefreak as a scapegoat. Because sometimes we give Pokemon something they don't have in the game and that makes them more fun to play with.

2 - PTE is Modular & Customizable

No two Campaigns of PTE should be the same, and homebrew will be developed over time in order to support this. While there is core material and all Classes in here should be core, I encourage homebrew content to be made to cater to how you wish to run the system so that every campaign will be a different experience. Homebrew will be organized and if liked, polished by development in order to make any style of play enjoyable.

This includes introducing a plethora of mechanics and homebrew classes that can be co-opted by GMs if they desire. Due to the Modular nature, you can play PTE by just reading the Rule Book and skimming other reference docs. This means that no amount of homebrew we add as potential options will lead to a system bloat, as they're not core to the system and can exist without it. Basically, if you have an idea for a Campaign, Character Class or Mechanic, like Shadow Pokemon, we will do our best to support it and make it accessible to the playerbase.

3 - Nearly All Paths should be Viable

One of the common pitfalls I saw in PTU was the struggle between character fluff and character mechanics. The most intuitive thing for a Player to do is come to the decision that they should take the Dancer Class because their Character would have that as a prominent thing they do. Makes sense to a new person but when they start playing, they'll realize that Dancer's output compared to other classes is extremely weak. Because of a rational decision of aligning fluff and mechanics, they ended up not having fun.

Of course, you don't need to take the Dancer class in order to dance in character, but Players that come to that conclusion should not be punished for doing so, so the solution and a goal of PTE is for all paths to be viable. This includes wide playtesting and constant balance updates to make sure that no character is underperforming because they chose a trap option.

4 - All Characters should be Unique

The core goal of this system is that no Campaign should be the same. There shouldn't be a solved meta where the only viable build is Ace Trainer, Taskmaster, Duelist, Juggler. While I'm completely aware of how much content there is in PTE and the crunch, I see it from a standpoint of crunch that is manageable and comprehensible, with all bonus content in supplementary books.

Compared to other Pokemon TTRPG Systems, I feel like Trainers should share as much customization and importance as their Pokemon, rather than being secondary in favor of streamlined and shorter combat. This has its pros and cons, but as a result it should lead to a gameplay experience that is memorable for anyone who plays and the ability for GMs to truly make the system bend to their creativity. And to enable it, there are plenty of examples and mechanics within the rule book and GM guide to help in this regard.

WE ARE NOT AFFILIATED WITH THE PTU DEV TEAM

PTE vs PTU?

The primary difference between PTU and PTE is glaringly obvious and it's the lack of regard towards the video game franchise. PTU was developed in a manner that directly transferred video game content to a tabletop format. Obviously this comes with issues since it's 1 to 1. We surely don't need 50+ Berries. The only thing from the video game that has been faithfully kept is the type effectiveness chart because that is all burned into our memories. Everything else is up to our interpretation. This includes having homebrew Attacks, Abilities, Levelup Lists, etc.

This will also include some interpretations of Pokemon lines, such as Annihilape being a split evolution instead of an evolution of Primeape, or removing Finizen as a pokemon and renaming Palafin (Zero Form) into Finizen (If you don't agree with these, just homebrew them).

As for all other differences, nearly everything has been adjusted with a fine-tooth comb so there are plenty of things that are the same conceptually but different mechanically. Using an analogy, PTU is a house and PTE is what happens when you refurnish it, build a few floors, new rooms, and paint the outside, its the same address, just a different experience.

Overview of Changes

» A lot of unnecessary mechanics and bloat has been removed such as Tutor Points, Action Points, Training Pokemon, Injuries, Base Stat Relation, Loyalty, Throwing Range, Poke Edges, Jump Movement, Pokemon EXP, etc

» Skill Checks have been reworked from a Target Number system to a Success/Die Pool System.

» Pokemon now get mini-classes in their progression known as Roles

» You can no longer capture in battle and it is relegated to social capturing or post battle

» Struggles are now Basic Attacks, can be physical or special and can shift to the user's types without capabilities like Firestarter

» The Action System has been adjusted, having more Swift Options and making Full Actions cost a Standard + Swift but be more impactful and adding Reactions.

» Egg Moves, Tutor Moves and TM Lists are all combined into one Tutor List

» Versatile Keyword has been added to give Status Attacks better usage compared to straight damage meta.

» All Afflictions are reworked, separated into Physical and Mental and a few added Conditions

» All new Classes are added and reworked

» The Initiative system has been changed to make combat more engaging and hopefully quicker

» Abilities have all been reworked from the ground up and are more core to a playstyle, but you get fewer of them.

System Documentation

As a Player and GM of the PTE system, a lot of information about specifics in the system are relocated in other documents to keep everything organized. In my opinion, this is essential to keep the system as streamlined as possible and to prevent the size from being intimidating. The amount of people i've seen turned away from a 500+ Page book is numerous.

Half of the Documents are also organized into Google spreadsheets (Excel) because the information is easier to update and add to over time that way without people needing to redownload their documentation. In addition, it allows for data to be pulled directly to the Digital Character Sheet.

Please download or bookmark the following documents as supplemental PDFs that contain the rest of PTE's Content.

Click the blue text to go to the linked documents.

Documentation Links

» [Digital Character Sheet](#) - This document is where you'll record all of your Character's information when making a Trainer.

» [PTE Pokedex](#) - This document has all information regarding statting Pokemon in PTE.

» [GM Guide](#) - This document is essential and must be read by GMs in order to run PTE, containing a lot of other crucial information listed below.

» [Attacks & Ability Reference List](#) - All Attacks & Abilities are listed here with information of their effects, etc.

» [Homebrew Compilation](#) - All Homebrew, official or otherwise, is listed here. This includes official modules listed in the PTE Roadmap when completed.

» [PTE Linktree](#) - Most important files are collected under our linktree for organization. Great for quick access!

Rule Book vs GM Guide

GM Guide

This Document contains all the **"Soft Rules"** of the System. The GM Guide is focused on information that is necessary for a **GM** to know in order to run the PTE System.

These however can be deviated from depending on the discretion of the GM and how they wish to run their game, allowing PTE to be narratively flexible on how outcomes are determined. These are a compilation of best practices however and provide frameworks on how a GM can run certain parts of their Campaign and it is ultimately how we feel PTE should be ran. Players should also read the GM Guide if they want a full understanding of the system but it is separated for the sake of digestibility.

Information in this document can include:

» Campaign Types, Alternate Pokemon templates, Tips on running PTE, Campaign Tools, etc

Rule Book

This Document contains all the **"Hard Rules"** of the System. The Rule Book is focused entirely on information that is vital for a **Player** to know in order to play the PTE System.

Rules in this System are designed to be less flexible and should be followed more strictly. It also contains the more essential information compared to information that would be more useful for a GM and padding to be skimmed through by a player.

Information in this document can include:

» How to build a Character, how to build a Pokemon, available Classes, etc

PTE Modules

Path of Elementalism

This Module will provide a list of rules and bonus classes if you want an elemental facet in your Campaign, allowing Trainers to channel the elements. Similar to the Elementalist Classes in Game of Throhs, this will provide a similar framework but structured as a toolbox class rather than a set of predefined features. These classes give you tools to express your preferred style of Elemental powers.

Status- Complete [\[Link\]](#)

Path of the Mundane

This Module will cover how to run a Campaign without Trainer's being a Fighter in combat. These Campaigns will be more centric on the anime similarly to PTA and be solely Pokemon Support while Trainers are on the backline. The basis of PTE is that Pokemon Trainers contribute to the fight, usually physically, but this Module will enable Campaigns that do not have Trainers being a physically active combatant.

Status- Temporary [\[Link\]](#)

Path of Occultism

This Module will provide a list of rules and bonus classes or mechanics if you want occult facets in your Campaign, allowing Trainers to gain supernatural powers. This will introduce a plethora of ways to use Occult Education which can be plugged into your campaign based on its setting and worldbuilding. This can include elements such as Oracles with Divination, Arcanists that master Arcane Weapons, Warpers that can teleport, or even Chronomancers that control Time.

Status- Complete [\[Link\]](#)

Path of the Divine

This Module will reintroduce Legendary Pokemon that have powers beyond just normal Pokemon. It will include gifts that they can bestow, tiers of legendary strength, and ways to introduce legends as divine bosses. It will include methods of servitude and interacting with Legendaries in a divine manner, like patronage or usurpation.

Status- Not Started

Path of the Artisanry

This Module provides an in depth system of jobs and professions that can expand character depth and introduce systems that let Characters interact with economic aspects of their Character. GMs can use parts of this module that are relevant to their Players such as a Brewing system for an Alchemist or Archeology for a Paleontologist. This Module includes elements such as Breeding, Farming, Fossils, Fishing, Cooking, Enchanting, Alchemy, etc.

Status- Not Started

Path of Lethality

This Module will provide rules on how to run harder and more lethal campaigns where death and injury is fully expected. It will also introduce less desired systems that tend to be loved by niche audiences such as attrition mechanics or more in depth Injuries.

Status- Complete [\[Link\]](#)

Path of Eras

This Module will cover any facet of a Campaign with relevancy based on the age its played in, primarily ancient past and distant future. Tech Education will gain many ways of being used as GMs can use this Module to do high tech campaigns and Players can be put to the test if they're thrown in an ancient world without modern technology such as the Pokeball. Classes and concepts will be introduced such as hacking, high tech weapons and even space travel or augmentation.

Status- Not Started

Book of Pokemon Gimmicks

This Module will cover all of the various Pokemon Gimmicks that have been added over the years and how to implement them into your Campaign. This includes Megas, Terastralizing, Z-Moves, Burst Pokemon, Contests, Shadow Pokemon, Totem Pokemon, Rangers, Dynamaxing, etc. As of right now they have temporary Items that can be implemented with GM nuance.

Status- Not Started

System Terminology

We use a lot of short hand so things may be hard to understand as a new player just learning PTE. In this section we'll list some common terminology that can be found. If you wish to gain more information, search this book for the listed term. If there's any you feel should be added, let us know!

We highly encourage you to jump around the book to read different sections to gain a total understanding. For example, a lot of Talents refer to other game mechanics being affected, especially Downtime rules, which are explained in a further chapter.

Abbreviations

PTE = Pokemon Tabletop Evolution
PTU = Pokemon Tabletop United
PTA = Pokemon Tabletop Adventures
Feat = Feature
SP = Spirit Point
CR = Challenge Rating
TN = Target Number
AC = Accuracy Check
DB = Damage Base
CS = Combat Stage
PC = Player Character
NPC = Non-Player Character
STAB = Same Type Attack Bonus
DR = Damage Reduction
EoT = Every other Turn
AoO = Attack of Opportunity
Tick = 1/10 of someone's Total Hit Points
6m = 6 Meters

Terms

Default Value = The Default Value of all Combat Stages are +0 CS. Some Features and other Effects may alter this and set or increase it to a different value like +1. If two sources would set the value, set it to the higher value.

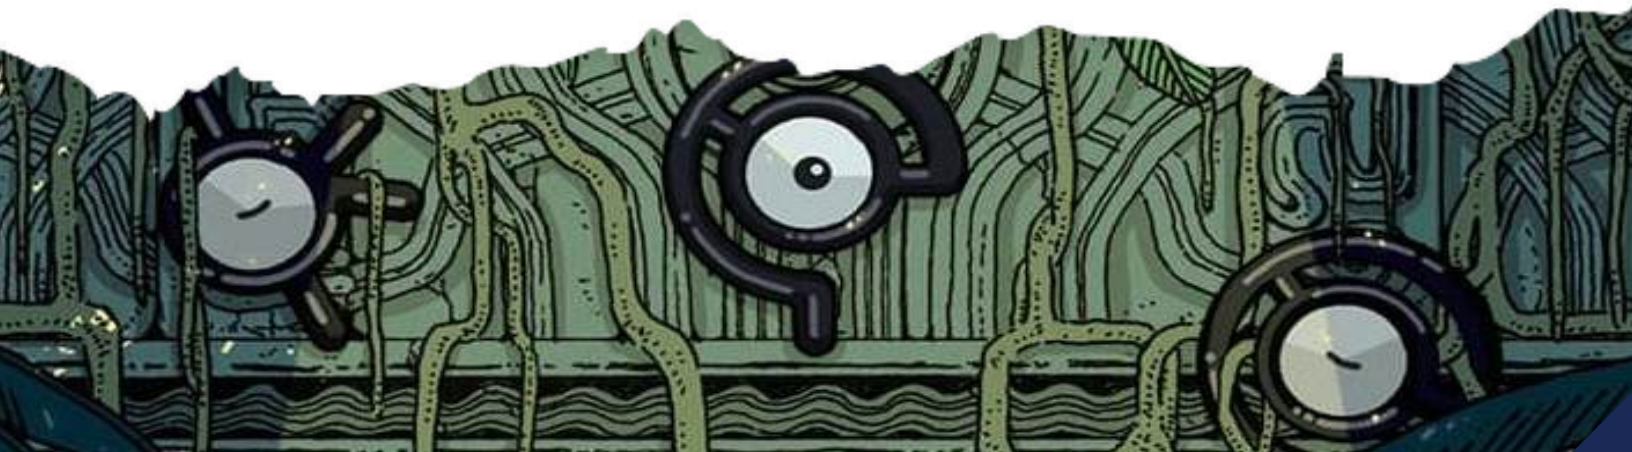

Naturally & Natural = It has not been altered by any source. Naturally Ground Type means nothing altered it to become Ground Type. A Natural 11 on an Accuracy Roll means that a roll that was a 9 but had a +2 Accuracy Modifier does not mean it's a Natural 11. Same concept as "Dirty 20 vs Nat 20 in D&D"

Uncapped = This allows a modifier to exceed the maximum limit of a specified Combat Value.

Damaging = Either Physical or Special. Basically shorthand for saying "Not Status and does Damage"

Slide = Forced Movement that doesn't provoke Attacks of Opportunity and does not count towards the maximum movement per turn.

Turn & Initiative = A Player's Turn Starts when they use their first Action during the Initiative that they chose to act in. An Initiative Starts when a Party decides which two Combatants will act. The Initiative and Turns ends when both acting Combatants decide they no longer wish to use their Actions and take their Turn, or have used all desired Actions. The Term Initiative is usually mentioned when it's referring to both acting Combatants and the Term Turn is usually mentioned when something only applies to one of the acting Combatants. However, they are usually interchangeable.

First Character Tips

Starting your first character can be rough! Especially in a system that has vast customization as one of its foundational principles, it may be hard to find out where to start. In this section we've laid out a few tips on what to do.

1. Read this Chapter in detail

The Character Creation Chapter has listed out in detail how to build a Character, including some examples so don't skim it! There's also a check list under this section for Character Creation.

2. Consider an Archetype

In the Trainer Archetype Examples Section, we've listed out a few general ideas for a Trainer to be built around. If you're running low on ideas or want to emulate a character in the Pokemon Series, check out that section for a template! Each Archetype includes Skills that are essential to them and possible classes you could take if you want your character to be like that.

3. Create a rough Character Plan

Before I set anything in stone, I usually plan out my character and how they'd shape out in the early stages of the Campaign. This includes at least 2 concrete Classes that shape their identity and 4 Skills that I know I want to focus on improving. Planning this much out gives me a solid basis of who my Character is while still being flexible enough to adapt in the Campaign.

4. Ask other Players what they want to do

Having a balanced party is essential to the group of players performing well, regardless of the game you play. You wouldn't want to have a party with 2-3 Clerics in D&D so consider the same when making a Character in PTE. If other players have a solid idea of what they want their character to be, start forming ideas of what build would fill in potential weaknesses of the party. If one Player wants their central classes to be Taskmaster and Berserker, they'll be very offensive and reckless in nature so perhaps you can counter it with a Provocateur Class and be more social in nature? Or maybe play as a leader with Commander!

5. Pay attention to Action Usage

Once you start getting experienced with building Characters, especially in PTU, you'll start to factor in the action usage of a Class so keep that in mind when making choices. Does this Class have too many standard actions? Classes like Empath tend to be very action heavy so pairing it with classes like Fighter who want to use their Standard Action to attack may not be the best idea. If you have an action heavy class you may want to look at some classes with the static frequency so you have more passive elements and your Classes don't clash with each other.

6. Don't worry about Mistakes

There's a section in the GM Guide regarding the idea of "Retraining" or redoing aspects of your Character as you learn the system. This is to be expected and only natural for new players!

Character Creation Checklist

Making a Character may be a lot to digest, especially if you're new to the system, so in this section we'll go over each individual aspect of creating a Character, from the Sheet to your mechanics. Consider this chapter a step-by-step guide on creating a Character.

Step 1 - Learn the Character Sheet

Thanks to automation and Google Sheets, the Character Sheet is able to streamline all information regarding your character. Go through each Tab and get familiar with what each cell does, and don't edit the ones with code in them unless you know what you're doing. Cells that are editable will be the lightest shade of blue as an indicator! [Click here for the Sheet.](#)

Step 2 - Think of a Character Concept

One of the more prominent parts of Character-building is having a concept. If you have an idea for a character, you'll have a better understanding of what mechanics you want them to have, which can help with selecting Talents and Features.

Step 3 - Create a Background

A Background, or backstory, is pretty important to characters in PTE. This includes your Skill Background, which consists of raising one Skill to Adept, three Skills to Novice, and lowering three Skills to Pathetic to show what your character is already good at and what they're already not as good at. As a reminder, it's also always nice to have reference art for your character, as that might help you visualize their backstory a little better.

Step 4 - Choose Talents

You gain 2 Talents for which you qualify at Level 1. Talents tend to lean toward the domain of granting Capabilities, expanding your Skills or even tweaking them, and overall providing non-combat utility. When in doubt, choose a Skill Specialty!

Step 5 - Choose Features

You gain four Features at level 1, selecting them from Classes or General Features that you qualify for.

Step 6 - Determine your Characteristics

As with your Concept and Background, lay out what your Trainer's Characteristics may be. Characteristics include their narrative Backstory, their Personality Traits, their Goals, Desires, Strengths, Flaws, Virtues, Key Principles, and any existing bonds or ties to other Trainers or NPCs. This doesn't have to be extensive! Just write down a few foundational notes and add to it over time and as you play with the Trainer more.

Step 7 - Assign your Combat Stats

Level 1 Trainers have 10 Level-Up Stat Points to distribute as they wish among their Stats, but remember that this system utilizes the Glass Cannon Clause: you cannot put more than 50% of your Level-Up Stat Points (rounded up) into a Stat.

Step 8 - Choose your Starter Pokemon

Your GM will set guidelines for which Pokémon you can pick from as a Starter. It might be as simple as any traditional Starter, as from the games, or your choices might span every Underdog Pokémon. You could even be allowed to start with multiple Pokémon! Be sure to ask if you're not told!

Step 9 - Determine your starting Wealth

Your GM might set a starting Wealth or give you starting Items at the beginning of your Campaign. Talk to your GM and determine how much money your Trainer starts with and what items they start with. You may even be allowed to look through the Item Index and pick what you want!

Character Creation Steps

Your Character Concept

You may feel tempted to immediately jump to crunching the numbers and optimizing your Trainer, especially if you're an experienced roleplayer. Don't yet! At minimum, skim through the Rule Book and get an idea of what's available before coming up with a concept for your character.

Your Character Concept is the foundation for your character, so take as much time as you want to plan it out. Alternatively, you could start with a simple or basic concept but expand it as your trainer progresses, depending on your campaign's setting.

If you need assistance in what kind of Characters can be made, there is a **Trainer Build Examples** section that shows a Character being built from the ground up and the decisions being made when building them. In addition you could look in the **Trainer Archetype Section** to get some insight in how they could be built if you have an idea in mind.

Your Character Background

Your Background encompasses many factors, a small number of which include **mechanics** and the majority of which are tied to your character's **fluff**, or roleplay facets.

Your **Mechanical Background** consists of your Skill Background, which is a depiction of your character's strengths and flaws in the Skill System when they start their journey. Refer to the **Skills Section** for a more in depth list of skills and their ranks, but they represent the training that your character uses to interact with the world, as well as incorporating a Trainer's natural talent in certain fields.

Choosing your Skill Background is basically determining what your Trainer inherently excels at and struggles with. At the start of Character Creation you choose the following:

- » **One Skill** to raise to **Adept Rank**
- » **Three Skills** to raise to **Novice Rank**
- » **Three Skills** to lower to **Pathetic Rank**

Once chosen, adjust their Rank value accordingly and list them in your Skill Background in your Trainer Tab.

Your **Fluff Background** consists of the remainder of your Background. This includes your:

» Backstory, Personality Traits, Strengths & Flaws, Goals and Desires, Virtues, Key Principles, and Bonds and Relationships with others.

You do not need to have a super detailed background at the start, as part of the fun is discovering how the character would react when presented with certain situations, however you should have enough of a basis to give yourself a foundation on how to roleplay as that character.

Try to have at least one small fact about each section, then a decent summary of the history and backstory of your Character. Coordinate these with your GM as it will give them ways to incorporate your character into the setting.

Talents and Features

Talents and Features are a major part of your Trainer and the brunt of all mechanics your Trainer can perform. This page consists of a brief explanation of each of the two, but if you want a greater explanation you should check out their respective chapters.

You start with two Talents at Level 1. Talents are slightly Mechanical but mostly Fluff-based, granting Capabilities, expanding and tweaking your Skill set, and providing utility that can be used outside of combat. Talents may also be obtained by forgoing a Skill Rank increase whenever you level up if desired but you get two for free at the start! Be sure to check the Prerequisites on the Talent to ensure you qualify.

You also start with four Features. The four Features you choose may either be General Features for which you qualify or taken from Classes, provided you meet the prerequisites. Class Features tend to be the primary use for Feature slots, as they grant the most combat utility, but General Features provide you with a host of other options that a Class might not. When choosing what Features to take, first look at the section on **How to understand PTE**, so you know what benefits it provides in combat and the restrictions, such as only being able to take Features from 4 Classes in total.

Your Combat Stats

Combat Stats are simple to change. Simply access your Combat Tab and distribute your remaining Level-Up Points into the Level-Up Cells on your Stats. Remember the Glass Cannon Clause: **you cannot put more than 50% of your Level-Up Stat Points into a Stat**. As such, at Level 1, you may not put more than 5 Level-Up Stat Points into any one Stat. Later in the book there's a section for Combat Stats which has a full explanation if you wish to know what each Stat can do before you invest in it.

Your Starter Pokemon

Once your Trainer's attributes have been set up, now is the time to choose your Starting Pokemon! This is a conversation your GM will likely have with you on what your limitations could be for choosing one.

Some may have a selective pool of Starters or some may allow access to any number of Pokemon as a starter despite not being a canon Starter, such as Gastly or Nidoran. After your GM confirms your Starter, you can stat them like any normal Pokemon (Refer to those sections if need be).

This will usually consist of setting up their inherit information like their Name, Combat Stats, Gender, Starting Attacks, Ability and Role! Refer to the Pokedex for this information.

GM Note - You should usually allow your Trainers to all start from a Supported Trainer wealth or average out their wealth. If Players start at different levels, obtain their consent to do so so there's little starting disparity. Some players enjoy rags to riches so they may be fine with it.

Example - The Party graduated from the Pokemon Academy and were sponsored by Professor Oak, getting ample resources and a rare starter each!

Your Starting Wealth & Items

Your GM will also determine how affluent your Character is upon starting their Campaign. This is heavily dependent on the setting and GM negotiations but below are three common levels that they could choose from if they desired.

Fresh Trainer - Fresh Trainers are any Character that is either starting their journey without any support or does not have access to any source of resources as they begin the campaign. This could be a Trainer from a poor village or someone who was abandoned by family to go off on their own. If this is the starting line, these Trainers **start with \$1,000- \$2,000** worth of Money or Items whose value equals this range. If they are a combat trainer, they would likely have a Training Weapon, being very crude. They would likely only have one Pokemon of very common origins. This could include starters limited to their home, limited to what they come across or basics like Pidgey or Gastly.

Supported Trainer - Supported Trainers are any Character they either are starting from an easier starting point or have some support network so they start with more resources. This could be a Trainer who's been given basic supplies from their family or a Trainer who's older and worked a bit to gain some resources of their own. If this is the starting line, **these Trainers start with \$3,000- \$5,000** worth of Money or Items whose value equals this range. If they are a combat trainer, they would likely have a simple Weapon to start with. They would likely have 1-2 starters or one starter that can be from common to uncommon origins. This could include Pokemon like Doduo or Phantump.

Privileged Trainer - Privileged Trainers are any Character that is starting with affluence of some kind and have a solid support network for them to start their journey. This could include a Trainer who has come from a wealthy side of town or lives in a well off community. If this is the starting line, **these Trainers start with \$3,000- \$8,000** worth of Money or Items whose value equals this range. If they are a combat trainer, they would likely have a simple weapon to start with. They would likely have 1-3 starters or 1-2 starters from common to rare origins. This could include Pokemon like Dratini or Yamask.

Trainer Creation Examples

Learning a new Tabletop System is difficult, we get it! This section will go through the Character Creation Checklist and create a Character so you can have concrete example on how to build one.

Concept #1 - Theodore Wilson

1. Create a Character Concept

The Campaign this Character is for is set in the Sinnoh region. I've looked through the book briefly and decided on playing a Trainer who was a Ranger from Snowpoint City and a nature conservationist. With this idea in mind it can determine every other facet of Theo.

2. Create a Background

I decide to make my **mechanical background** first. I decide to make **Nature Education** my **Adept Skill** considering he knows a lot about the wild. For my **Novice Skills**, I decided to pick **Athletics, Acrobatics and Command**. Athletics and Acrobatics cover Theo being physically fit from being an outdoorsy character and Command can display his confidence and control over his Pokemon. For his **Pathetic Skills** I decide to lower **Tech Edu, Focus and Intimidate**. Tech Edu was lowered because he has a difficult time learning new tech and no interest. Focus was due to me deciding he was more scatterbrained and easily distracted. Intimidate was because I decided he was good at being a leader but wasn't good at being threatening.

For my **fluff background**, I decided to make a few additional notes about Theo. One was that he's never been outside of Snowpoint due to his family's religious obligations and longs to explore nature. Another was deciding that he has an intense rebellious spirit and will go against any organization to do what's right. Lastly I decided that he would be a very confident personality and the leader of any party if given the chance to be.

3. Choose Talents

Now that I have a decent idea of how Theo will be played, it's time to choose my Level 1 Talents! I skimmed through the list and wrote down all the possible Talents I would like on this Character.

This includes

» Confident, Home Advantage, Scavenger, Survivalist, Wild Companion and Wild Instincts.

That's a lot to narrow down! I decide to cross out Wild Companion and Wild Instincts due to the lack of exposure Theo would've had to Pokemon while in nature. After mulling it over some, I decide to take the **Confident** Talent so he has an easier time with social checks! Considering that I have novice Command, I qualify to take this! For my second Talent I decide to choose **Home Advantage** and choose Tundra for the Terrain, considering he grew up in Snowpoint. I decide to take Nature Researcher later so I get the Naturewalk I need to qualify for this! Doesn't matter if I do the steps out of order.

4. Choose Features

Now it's time to take my 4 Starting Features! For these, I can choose either from the General Features or from any Class.

Firstly I skim through the General Features and decide that I don't want Theo to directly deal damage, but instead support his allies. With this in mind, I take the **Assistive Combat General Feature** to allow me to learn the Helping Hand and Coaching Attack, which will give me something to do in combat! I skimmed the rest of the General Features and nothing stood out to me immediately so now I decided to look through Classes.

Immediately, two classes stood out as fitting my concept, Ranger and Nature Researcher. So for my second Feature I take the **Nature Researcher Feature**, taking one of my four possible [Classes] in the process. Because I took that Feature, its effects allow me to gain the Naturewalk Capability for Terrain of my choice, so I decided that Tundra would be the best fit, so I noted having Naturewalk (Tundra) in my Combat Page.

For my third Feature, I decided that another feature under Nature Researcher stood out to me, being **Survival Instincts**. I also qualify for this because I have Adept Nature Edu from my background and I have the Nature Researcher Feature. Its effects allow me to cure myself of a Status Affliction and have a bonus if I'm in Tundra Terrain, which may be rare but fits Theo's resilient nature!

Lastly I decide to take the **Ranger Feature**, which counts as my second out of four Classes I can take. This lets me gain the Ranger Styler with its effect! Not only that but it grants a bonus while I have it equipped, which is great because I don't have a lot of items yet.

5. Assign Combat Stats

I now get to assign 10 Level-Up Stat Points to Theo. Considering he won't be dealing damage in combat, I know Attack and Special Attack will be useless. **I decided to put 5 Points in HP and 5 in Speed.** The Speed will account for his nimbleness and allow him to have 2 Speed Evasion and the points in HP will make him more difficult to faint.

6. Choose a Starter

I know I want something local to Snowpoint city because he was unable to leave the city so I decided on a **Cubchoo!**

7. Determine a Starting Wealth & Items

Considering my origins, I spoke to my GM and we decided I would be a **Fresh Trainer** for my wealth level, having about **\$2,000** to start and no Training Weapon considering my aversion to inflicting harm on others. My GM allows me to purchase items before the campaign starts so I decide to spend **\$1,000 on a Light Armor**, so I can be slightly tankier to start since I would've had some equipment when I explored the wild. Then I decide to buy **2 Basic Healing Potions and a Pokeball to spend the last \$1,000**, just for basic supplies. **And with that, Theo the Ranger is created!**

The first Trainer is created! How about we try another one out? Here's the next concept.

Concept #2 - Olivia Harper

1. Create a Character Concept

For my next character, let's say this Campaign takes place in a Pokemon Academy that's a college equivalent for advanced Trainers who want to take battling to the professional level! This will take place in Kalos so I decided to create a Trainer named Olivia Harper. She's from a wealthy family in Lumiose City and her parents are tycoons in the real estate industry.

2. Create a Background

I decide to make my **mechanical background** first. For my **Adept Skill**, I decided to take **Command**. Considering her background, I'll treat her as being highly educated and an expert at battling, not to mention she has a controlling personality so Command could be her social skill of choice. For her **Novice Skills**, I decided to take **Charm, Poke Edu and Focus**. Charm will be because of her popular nature and ability to sway others. Pokemon Education will be because she's well versed and studies battling as her profession. Lastly, Focus was chosen due to her ability to be studious. For her **Pathetic Skills**, I decided to take **Intuition, Stealth and Acrobatics**. Intuition is because I see her as fairly dense and thick headed. Stealth is because she has no sense of her surroundings and isn't secretive at all. Acrobatics is because she is not athletically skilled and is clumsy.

For my **fluff background**, I decided to add a few more notes to her. One is that she prefers to train Psychic Type Pokemon due to their cute but powerful nature. Another was deciding that she's a Teacher's Pet and will stop at nothing to achieve her goals, including being top at class. Lastly, I chose to make a list of enemies she would have in school, mostly for petty reasons which could all be negative bonds the GM uses to annoy her.

3. Choose Talents

Next up is talents! I'm still mulling over a direction for her Classes to go so I'll choose this first and skim through the list. The following Talents below are all ones I think would fit her.

This Includes

» Confident, Fashionista, Manipulator, Natural Beauty, Pokemon Trainer and Researcher

That's a lot to choose from! While all of these stick out, I talked to my GM for a bit and we had the idea to take **Researcher**. We agreed that Olivia could be able to perform the Innovate Downtime Action in order to create custom [Orders] and Attacks to teach her Pokemon and her Allies' Pokemon, so the Talent would grant a bonus! For the second Talent I decide that she takes the **Fashionista** Talent, qualifying with Focus. This is so she can make cute outfits for her Pokemon.

4. Choose Features

Now it's time to take my 4 starting features! Firstly, I skim through the **General Features**. I find the following General Features interesting to take but I don't take any yet. I noted them down as options down the line but I want to look at Classes first.

This Includes

» Alluring Combat, Commanding Trainer, Focused Commander, Skill Consistency (Command or Poke Edu)

Next I skim through Classes to see what kind of identity I want for Olivia, as there are multiple directions I could go. The following classes I could see Olivia take:

This includes

» Commander, Strategist, Training Specialist, Duelist, Psychic Specialist, Provocateur, Debonair

Clearly, this is too many classes and I can't take them all since I can only take from a maximum of 4 Classes. At this point I need to narrow down an identity for Olivia. I ruled out Psychic Specialist because I think it's just a preference for her, not a focus for her team. When it comes to combat, I think she would prioritize [Orders] on her allies to control the battle rather than using social moves to torment enemies. With this in mind I then ruled out Provocateur since that is more generic social gameplay. Lastly I ruled out Commander since I don't want her to have too many [Orders], but the features from Strategist will give her enough to do in battle.

With this narrowed down, I decide her final build will be **Strategist, Training Specialist, Duelist and Debonair**. This allows her primary role in battle to be handing out orders and enacting strategy but on the side she can use her feminine wiles to manipulate her enemies, as Debonair has some passive and lower action Features. Now it's time to select her Features!

I decided that in the early game I'll focus more on her commanding side, then develop the charming side later, as I don't currently qualify for Debonair or the Social Features. The first Feature I took was the **Training Specialist Feature**. This allows me to improve the Default Combat Value of some of my Pokemon, then grants me my first Class.

Considering I have Adept Command, I also decided to take the **Signature Technique Feature** from the Training Specialist Class. This allows me to grant my Pokemon custom attack modifications and improve their combat output!

For my third Feature, I decided to take the **Strategist Feature**. This lets me use Orders as a free action sometimes when I plan out the battlefield accordingly.

For my last Feature, I decided to take the **Initiate Protocol Feature**. This allows me to have more [Orders] I can perform at a low level.

5. Assign Combat Stats

I now get to assign 10 Level-Up Stat Points to Olivia. Her role in combat is shooting out Orders and sometimes being social and applying Mental Afflictions to enemies, so she doesn't need Attack or Special Attack. I decided to put **5 Points in HP** so she can be slightly bulkier and **5 Points into Special Defense** considering I feel as though her mind is firm and resolute. I could add more into speed later but that's not as important to her.

6. Choose a Starter

With the amount of affluence her family has she could likely pick any starter, affirmed by my GM. However I feel like the perfect match for her would be a **Hattena**! It fits her personality, is likely common to urban areas and nearby forests, and is adorable!

7. Determine a Starting Wealth & Items

Considering her origins, the GM agreed that she could start as a **Privileged Trainer**, provided some of the wealth be shareable to the Party which I agreed she would, after they gain her trust. She started with about **\$5,000** to start and decided to not gain a Weapon considering her aversion to physical combat. However, I do come to the conclusion that she would be adept at playing the **Violin**, so the GM agrees to let me spend **\$3,000 for a Bardic Instrument** with the **Heal Bell** and **Screech** Attacks being applied to it. I then ask to buy some **[Small] Stylish Clothes for \$2,000** which I choose to be an accessory for the Charm Skill Check.

And with that, **Olivia the Commanding Beauty has been created**, with a full Build planned of **Strategist, Debonair, Training Specialist and Duelist!**

Trainer Archetype Examples

In this section we'll list out some Archetype Examples of themes you could build your Character around in case you need some ideas.

The Adventurer

The Adventurer is a Trainer who is driven by a sense of wanderlust and exploration, one who is most likely to partake in a journey, having no other roots to attach themselves to besides a passion for excitement and discovery. These types of Trainers are characterized by their curiosity, adaptability and knowledge of the world outside civilized society.

Key Skills - Poke Edu, Nature Edu, Gen Edu, Perception

Recommended Classes - Nature Researcher, Training Specialist, General Researcher, Nomad, Musician, Chronicler

Character Examples - Ash Ketchum, Goh

Summary

Skills like **Poke Edu** and **Nature Edu** can explain your expertise with exploring out in the wild. **Gen Edu** can explain your Trainer's array of knowledge from traveling multiple places. Lastly, **Perception** could show your Trainer's alertness due to traveling.

Classes like **Nature Researcher** can grant the adventurer Nature Walks, the ability to set traps in the wild, and the ability to adapt to their surroundings based on terrain they've experienced in the past. **Training Specialist** would be common for Adventurers because of their reliance on Pokemon to aid them in the wild and their frequent exposure. **General Researcher** could display the Trainer's vast array of talents and general knowledge from their past journeys. **Nomad** would allow the Trainer to carry more items and better utilize them in combat. **Musician** can be taken on more of a traveling vagabond that is more musically inclined and supportive in nature. Lastly, **Chroniclers** specialize in taking notes on things they encounter and could represent a trainer who explores a lot.

The Athlete

The Athlete is a Trainer who prioritizes physical prowess and excels in their combat abilities. Unlike other Trainers, they great not in commanding pokemon, but fighting alongside them and being able to fend for themselves when push comes to shove.

Key Skills - Acrobatics, Athletics, Combat, Focus

Recommended Classes - Defender, Fighter, Marksman, Strider

Character Examples - Brawly, Korrina

Summary

Skills like **Acrobatics** and **Athletics** are the embodiment of your physical form and depending on if you're more nimble or bulky, should be taken to represent your athletic prowess. **Combat** would express your ability to perform combat maneuvers which is your experience at fighting rather than your physical strength. **Focus** would be a representation of your discipline as an athlete and your fortitude.

The Recommended Core Classes are all dependent on your preferred style of fighting which we recommend at least one Advanced class be your specialty. Examples include being a **Defender**, to represent a physical bulkiness and devotion to endurance. **Fighter**, which demonstrates your offensive capabilities to strike down others in a fight up close and personal. **Marksman** could be for Trainers with more of a perceptive mastery for ranged combat. Lastly, **Strider** can be a representation of acrobatic prowess and being a nimble athlete.

The Battler

The Battler is a Trainer who specializes in Pokemon Battles, even beyond other Trainers that casually have Pokemon companions. This rank of Trainer would be comparable to Ace Trainers and Champions who excel in knowledge of Pokemon and how to command them so that they never even need to step into the fray.

Key Skills - Command, Poke Edu

Recommended Classes - Commander, Training Specialist, Type Specialist, Battle Specialist

Character Examples - Cynthia, Leon, Gary Oak

Summary

Skills like **Command** display your ability to hold sway over others and demonstrate your ability to command Pokemon in combat. **Poke Edu** would also be very beneficial considering that you have a lot of exposure with battling with other Pokemon so you'd know some more uncommon knowledge that could be relevant to battles.

The Recommended Core Classes are all **Pokemon Based**, as we'd recommend at least one Advanced class to be your specialty to show prowess as a battler. Examples include **Commander**, which you could show to display your ability to command others even beyond Pokemon. **Training Specialist** would be the most generic choice as it allows you to specialize Pokemon based on how you train. Lastly, **Type Specialist** could be an option, such as gym leaders having an affinity towards using certain Pokemon over their career as battlers.

The Caretaker

The Caretaker is a Trainer that prioritizes the well-being and development of others around them above themselves. They tend to have a nurturing nature and ultimately have the desire to be a support for their party, helping everyone achieve through their specialties.

Key Skills - Charm, Intuition, Med Edu, Poke Edu

Recommended Classes - Motivator, Apothecary, Empath, Defender, Pokemon Researcher

Character Examples - Brock, Nurse Joy

Summary

Skills like **Charm** can be used to display your character's outwardly warmth towards others along with their empathy. **Intuition** could be raised due to their innate ability to sense what is wrong with others around them. **Med Edu** could be taken if your character tends to care for others through medical means such as a nurse or even basic medical knowledge! **Poke Edu** can be taken if your Trainer has more of a breeder background or has taken care of Pokemon in the past rather than other humans.

Classes like **Motivator** can grant you supportive features that enable your allies to succeed! **Apothecary** can be taken if you have more of a medical background, helping you administer medicine better in combat. **Empath** can be taken if there is a supernatural sense behind your empathy, allowing you to sense the emotions of others. Lastly, **Defender** can be an option if your Trainer is athletically capable of being a guard to others, possibly taking the **Sentinel** Class as well if you're a defender of the weak!

The Criminal

The Criminal is a Trainer with sketchy origins, usually having some sort of specialty that has strayed them from the path of being law abiding in society. This could be involvement with some villainous team or possibly straying from the path normal Trainers take for their own self interests.

Key Skills - Combat, Guile, Intimidate, Stealth

Recommended Classes - Alchemist, Rogue, Taskmaster, Trickster, Ruffian, Imposter, Geneticist

Character Examples - Team Rocket, Giovanni

Summary

Skills are highly dependent on your type of criminality. Skills like **Combat** could be used more for thugs and to show your ability to scrap in the field. **Guile** could be better for conmen and those who scam others easily. **Intimidate** is for criminals who frequently interact with normal civilians and use fear to get their way. Lastly, **Stealth** can be used for more covert criminals.

Classes like **Alchemist** could be taken by criminals that specifically create their own illicit substances. **Rogue** and its advanced classes like **Assassin**, **Ninja** and **Swashbuckler** are a key part to any criminal's skill set and could easily fit your build. **Trickster** could be for more guile focused Trainers, lying and manipulating their enemies. **Taskmaster** could focus on your rough treatment of your Pokemon, training them in a harsh manner. **Ruffian** could be for more intimidating Trainers that focus on benign an imposing figure. Lastly, **Imposter** can fulfill the fantasy of duplica or team rocket, specializing in guile and disguises.

The Innovator

The Innovator is a Trainer that comes from a background in education and who excels in the creation of items that can assist them and their party. Most commonly, these Trainers excel in technology but more generally specialize in a field of study.

Key Skills - Tech Edu, Perception, Focus

Recommended Classes - Tech Researcher, Artificer, Jailbreaker, Operator, Geneticist

Character Examples - Clemont, Colress

Summary

Skills like **Tech Edu** are your basic bread and butter ability to discern technology and create it at your whim, which is central to the Innovator archetype. Other education skills can be swapped in, such as an innovator specialized in the wild and plants would be good at **Nature Edu**. **Perception** could display your ability to find fine details which would be a common skill when making new inventions. Lastly, **Focus** is something any innovator would need when creating magnificent contraptions.

Classes you could take depend on your field of innovation, most commonly it'd be **Tech Researcher** but it could be a class like **Herbalist**, one specialized in utilizing seeds in combat. **Tech Researcher** in general allows you to create gadgets that can help narratively, while their advanced classes specialize in other things. **Artificer** allows the trainer to specialize in type shards and create items that can utilize the elements. Lastly, **Jailbreaker** specializes in pokeball creation and manipulation.

The Mystic

The Mystic is a Trainer who specializes in the art of the occult, however that may manifest in your Campaign. Compared to physical attributes that Athlete specialize in, the Mystic specializes in mental attributes.

Key Skills - Focus, Occult Education

Recommended Classes - Occult Researcher, Aura Guardian, Empath, Mystic, Type Specialist, Imposter

Character Examples - Sabrina, Morty

Summary

Skills like **Occult Education** are the basis of the Mystic, as they tend to specialize in one occult topic in one way or another. Whether its telekinesis, the art of empathic connections, aura, or even ghost type history, there's bound to be knowledge that can be pursued. Lastly, **Focus** can be a good measure of the mental fortitude that a Mystic has.

For Classes, you have various options that all depend on your occult specialty. **Occult Researcher** is a generic one that grants you some special supernatural abilities and empowers its Advanced Class. **Mystic**, however are Trainers that are born with innate supernatural abilities and can provide offensive support similar to Fighter. Some Advanced Class options are **Aura Guardian** which give you a mastery of Aura similar to Lucario or **Empath** which provide a connection to the minds of others around you. You also could do **Sage** which lets you protect others or **Esper** which gives you psychic abilities like Sabrina. You could also go the route of a **Type Specialist** like **Fairy, Ghost or Psychic** and specialize your knowledge based on Pokemon of that category. Lastly, you could go **Imposter**, which has a supernatural element of copying the attacks from your allies or enemies.

The Performer

The Performer is a Trainer who captivates others with their skills and talents, usually having some basis in beauty or entertainment in some cases. They often use their performative skills to assist them and shape their method of combat, usually on the defensive or support side.

Key Skills - Acrobatics, Command, Charm, Guile

Recommended Classes - Acrobat, Dancer, Motivator, Musician, Provocateur, Performer, Coordinator

Character Examples - Dawn, Nando, Wallace

Summary

Skills like **Acrobatics** allow your Trainer to be nimble, if that's the style of performing the do, especially if they take classes like Strider. **Charm** allows them to excel at the art of performance and others being charmed by their skills. **Command** can lead your Trainer to having more of a presence on stage and represent their notoriety. Lastly, **Guile** allows more deceptive types of performances, possibly including magicians and con men!

Classes like **Acrobat** and **Dancer** are more on the combat and acrobatics side of performance, allowing your Trainer to be more evasive and nimble in combat or support others through dance, respectively. **Motivators** are more on the charming side of performance to support allies. **Musician** allows the Trainer to gain bardic qualities and take music combat! **Provocateur** can allow performers to spice up their combat with verbal jabs and improve their social qualities such as becoming a **Debonair** to sway others. Lastly, **Coordinator** and **Performer** can help you with your more stylistic side, giving special techniques to Pokemon or gaining flair on the field!

The Protector

The Protector is a Trainer who excels in defending their allies and has a sacrificial spirit at heart. They rarely have any offensive capabilities and tend to devote their turn in combat to protecting those who can. These are the quintessential tanks of the party.

Key Skills - Athletics, Combat, Command

Recommended Classes - Defender, Bulwark, Sentinel, Rider

Character Examples - Kiawe

Summary

Skills like **Athletics** and **Combat** easily show your Trainer's bulkiness, endurance, and ability to withstand damage. **Command** could also be used for a leader that is more defensive, calling the shots as they protect their allies.

Classes like **Defender** and all of their Advanced Classes are the primary skills you need to excel as a protector, as it grants you defensive tools to withstand hits as you intercept for allies. **Bulwark** can allow you to defend allies easier and control the battlefield, while **Sentinel** can retaliate against those who would harm their allies. Alternatively there are some classes like **Rider** which mechanically allow you to act alongside your Pokemon and protect each other when the scene is dangerous. As a protector, your primary goal is to Intercept and defend others.

The Ranger

The Ranger is a Trainer who is in tune with the wild around them and Pokemon life in their world. The abilities of a ranger vary depending on your definition but they often serve as protectors of nature and pokemonkind, doing their best to keep the peace as enforcers

Key Skills - Command, Perception, Nature Edu, Poke Edu

Recommended Classes - Nature Researcher, Hunter, Marksman, Ranger, Pokemon Researcher

Character Examples - Officer Jenny, Solana

Summary

Skills like **Command** can help your Trainer increase the authority they may command along with the respect others grant them. **Perception** can be helpful if you're in the path of a marksman, using ranged weapons to easily spot danger. **Nature Edu** can display your knowledge of the natural world around you and **Poke Edu** can display your ability to train and command Pokemon.

Classes like **Nature Researcher** can allow you to gain tools such as Naturewalks that increase your combat capabilities in certain environments you specialize in. **Hunter** could allow you to have better coordination with your Pokemon in combat. Lastly, **Marksman** could allow you access to ranged combat so you can enforce the peace easier and defend the weak!

The Rebel

The Rebel is a Trainer who defies the traditional norms of a Pokemon Trainer and is generally a pain for others to be on a team with. This could include how they train Pokemon, how they act in combat or general attitude towards the world around them.

Key Skills - Charm, Guile, Intimidate

Recommended Classes - Taskmaster, Musician, Ruffian, Rogue, Provocateur

Character Examples - Gladion, N

Summary

Skills like **Charm**, **Guile** and **Intimidate** are all social skills by which you can enact rebellion and sway others to join your ideals in some way.

Classes you take depend on your style or rebellion and how you choose to act out against society in your setting. Some generic examples could be **Taskmaster**, which tends to train their pokemon harsher for a more disciplined Pokemon in battles. **Musician** could be a supportive rebel that uses the power of rock and roll songs to achieve their goals! **Rogues** tend to be more ferocious in nature, such as **Swashbucklers** living by their own creed and excelling in combat when they're in more advantageous positions. Lastly, **Provocateur** classes tend to focus on social prowess in combat such as being a Trickster and manipulative rebel.

The Scholar

The Scholar is a Trainer whose skills come from their education and what they specialize in academically. This can include general knowledge, medical knowledge, natural knowledge, occult knowledge, pokemon knowledge or technological knowledge. This tends to be the path of most professors in the Pokemon world.

Key Skills - Any Edu Skill

Recommended Classes - Type Specialist, Any Researcher, Battle Specialist, Geneticist

Character Examples - Any Professor

Summary

All Education Skills are core to the Scholar, they just need to pick which one they specialize in!

Classes like **Type Specialist** can symbolize knowledge of training Pokemon of a specific type, such as gym leaders. Each **Researcher class** also has options you can go based on what edu skill you specialize in. For example, if you're a medical scholar, you can go **Medicine Researcher** for generic tools that help with potion usage. You could also specialize as an **Alchemist** if your medical knowledge is more chemical in nature, allowing you to use malicious potions in battle. Alternatively you could be an **Apothecary**, specializing in restorative medicines that help your allies.

The Specialist

The Specialist is a Trainer who specializes in a specific category of Pokemon, whether the basis is a type, a species or genus. Examples could include a trainer who specializes in canines like Houndour and Greavard, a trainer who specializes in Fire Type Pokemon, or a Trainer who specializes specifically in Vivillon breeds.

Key Skills - Poke Edu

Recommended Classes - Type Specialist, Training Specialist, Chronicler, Battle Specialist

Character Examples - Gym Leaders

Summary

Pokemon Education is the primary skill that links all Specialist Trainers, as they need extensive knowledge of their current obsession.

Classes like **Training Specialist** would be appropriate for these Trainers, as they're always exposed to Pokemon and likely have their own special way of training and caring for the Pokemon they study. **Chronicler** can also be an option as they're likely used to studying Pokemon to fulfill their specialty. Lastly, **Type Specialists** help if a Specialist is focused on a specific type as it allows them to excel at utilizing them in combat or training with them.

The Tactician

The Tactician is a Trainer that specializes in quick wit and mastery over the battlefield. Their innovative strategies and quick thinking help them adapt to anything that occurs within a battle and they're often leaders in their adventuring party.

Key Skills - Command, Intuition, Perception

Recommended Classes - Commander, Motivator, Strategist, Training Specialist, Battle Specialist

Character Examples - Steven Stone, Cynthia, Ash Ketchum

Summary

Skills like **Command** are essential to Tacticians, allowing them to more effectively order around those around them and convince them of their plans. **Intuition** helps the Trainer analyze the scenario around them, granting them additional information that others may miss! **Perception** can also be used to find small details that may influence their plans.

Classes like **Commander**, **Motivator** and **Strategist** are all essential to this archetype, allowing them to have influence over their allies and help assist them in battle to succeed as a party! Lastly you could take a **Training Specialist** class or even something like Duelist to show your expertise over Pokemon.

Trainer Progression

Trainers usually all start at **Level 1** and can reach a Maximum of **Level 20**. At Trainer Level 1, apply all of the following benefits to your Trainer!

At Level 1 you start with...

- » 4 **Features**
- » 2 **Talents**
- » 1 **Adept Rank Skill**, 3 **Novice Rank Skills**, and 3 **Pathetic Skills**
- » +10 **Level-Up Stat Points** to Distribute
- » Base Stats as a Trainer of 10 HP, and 5 in every other Stat

After this point, each time your Trainer levels up, they gain the following benefits listed below. Follow this list to determine what your Trainer gets everytime they Level Up.

Each Level-Up

- » You **gain a Class Feature** or **General Feature**
- » You **rank up a Skill** or **gain a Talent**
- » You **gain +5 Level-Up Stat Points** to Distribute.
[Remember the Glass Cannon Rule]
- » Your **Maximum Pokemon Level increases by +5**
- » Your **Pokemon increase their Level by up to +5**

Example (Leveling Up) - A Trainer levels up from Level 1 to 2! They gain the following, each chosen from the list above.

- » They gain the Criminal Combat General Feature
- » They raise their Stealth from Novice Rank to Adept
- » They put +3 Stat Points into Attack and +2 into HP
- » Their Max Pokemon Level changes from 5 to 10
- » Their Spokin increased from Level 5 to 10

Specific Level Milestones

At Level 5, 10 and 15, you gain and unlock certain Milestones which are listed below!

- » **At Level 5** - You gain +10 **Level-Up Stat Points** and qualify to take **Expert Rank Skills**
- » **At Level 10** - You qualify to take **Master Rank Skills**
- » **At Level 15** - You gain +10 **Level-Up Stat Points** and qualify to take **Virtuoso Rank Skills**

In addition, at each of the Levels listed above, you may choose one of the following bonuses to gain as well:

- » You learn the Skill Specialty Talent
- » Choose two Skills that are Novice Rank or below to Rank up. At Level 10 & 15 you may instead choose two Skills that are Adept Rank or below to Rank up.

Leveling Up as a Trainer

As you proceed on your Journey as a Trainer, you will gain **Merits**, which serve as Experience Points for your Character.

PTE follows a Psuedo-Milestone level based progression system, so whenever the GM narratively feels as though a goal has been accomplished they grant Merits to the Party based on the impact of the Milestone.

Whenever the Party reaches the **Merits Needed** in the chart below, they **reset to 0 Merits and Level up!**

We recommend that whenever the Party is at the Level on the Left, they need the following amount of Merits to advance to the next Level, however, based on your preference you can adjust how fast they level up. For example if you want a slower paced Campaign, they could need 5 Merits from Level 1-5 to Level up.

Party Level	Merits Needed
Level 1-5	3
Level 6-10	5
Level 11-15	7
Level 16-20	10

Gaining Merits

As you progress in your Campaign and accomplish tasks as the heroes, your Party will gain Merits over time and level up. The below section notes how many Merits you tend to gain based on the Milestone you completed and can be a rough guide on how the GM can distribute EXP.

Simple Milestones - 1 Merit

The simplest of milestones should only grant 1 Merit. These tend to be either easy missions or above and beyond successes that a Player performs, allowing you to give chip exp as a reward. If you're impressed with how the Players dealt with an encounter, grant them a bonus Merit! Not all Encounters or battles qualify as a Simple Milestone.

Example (Simple Quest) - The Players are asked to go clear some Rattata that are frequently stealing from a Pokemart's storage facilities. They go to the storage and defeat them in battle, rewarding them 1 Merit alongside other rewards offered by the shopkeep.

Example (Notable Success) - The GM is impressed after a Level 2 Trainer manages to trick a Nidoking into leaving their party alone after they have their Zorua conjure an Illusion of a Tyrannitar.

Example (Notable Success) - The GM is impressed after the Party successfully convinces a group of cultist Pokemon to abandon their ritual in favor of helping the community.

Notable Milestones - 2 Merits

Notable Milestones are basically a Simple Milestone in scope, but it was mechanically harder or more time consuming than normal. It doesn't need to have the same impact as a Major Milestone but if it was a difficult scenario, grant 2 Merits. Notable Milestones are usually a difficult task that works towards the greater scheme of the Campaign.

Example (Harder Quest) - The Party is planning a heist of Professor Oak's lab and spend the session preparing for it. The heist itself is fairly challenging with multiple obstacles and Pokemon to face but they succeed and gain 2 Merits!

Example (Defeating an important NPC) - The Party comes across the admin of Team Magma and is ambushed into a battle. This is certainly more difficult than your everyday trainer and they have to deal with threats on all sides. After defeating the admin and escaping however, they're rewarded with 2 Merits.

Example (Leveling Up) - A Party is at 2 Merits and is Level 3 and they manage to defeat the Pewter City Gym! This is a Major Milestone for a Gym Crawl Campaign so the Party gains 3 Merits. This lets them Level Up immediately, then sets them to 2 Merits again, since they only need 3 to Level Up at this stage.

Major Milestones - 3 Merits

Major Milestones are given out when a pillar of your Campaign has been completed. These should usually be clear before a Campaign begins on what quantifies as a Major Milestone. For a Gym Crawl, a Major Milestone is defeating a Gym. For Dragonball Z, finding one of the 7 dragon balls is a Major Milestone, etc.

Example (Gym Campaign) - The Players go to Cerulean City and spend the next session preparing for and eventually defeating Misty. This counts as one of their 8 Gym Badges and they are granted with 3 Merits.

Example (Conquest Campaign) - The Players are reclaiming cities that are overtaken with Shadow Pokemon. After defeating a big Guardian Boss and the pack dispersing, they save the town and gain 3 Merits.

Example (Narrative Campaign) - The Party has a big confrontation with an Admin of Team Rocket with the goal being taking down Giovanni from within.

Legendary Milestones - 5 Merits

Legendary Milestones are pivotal moments in your Campaign that defy the odds. These should rarely be given out but if your Party succeeded something truly difficult, they should be rewarded in kind with 5 Merits.

Example (Defeating a Legendary) - The Party is called on a mission to reclaim an island that is being overan by minions controlled by Pecharunt. After a few sessions they finally encounter the Legendary and defeat it!

Example (Defeating the Elite Four) - Nearing the end of their Journey, the Party challenges the Elite Four and becomes Champions, moving the Campaign into the end game zone where they roam the region and challenge bigger bosses.

Example (Beating a major NPC) - The Party confronts Giovanni and ambushes him with a group of police, ready to arrest him. A major confrontation happens and against all odds, the players succeed!

Aspects of a Character

Now you should have your Character created! So let's overview each aspect that makes your Character who they are.

Talents

Talents are almost always non-Mechanical aspects that support a Character's non-combat utility. Talents could grant effects such as being able to see in the dark, being able to speak to pokemon, allowing them to craft specific items or allowing them to use Skills in more versatile manners.

General Features

General Features that allow Trainers to become better in mechanical aspects of the system but not good enough to specialize in it. These grant Players tools that should be accessible regardless of the classes taken by the Player, such as learning Attacks or Orders.

Classes

Other than General Features, there are also Class Features which are bundled into a group known as a Class. Classes are small pools of mechanical effects that are focused on improving combat capabilities around a certain idea. For example, the Berserker Class will grant you tools to mechanically become an enraged warrior and live out the trope. The first Feature in each Class has a [Class] Tag, and you can only have 4 of these Features in total, thereby, you can only benefit from features from 4 Classes per Character.

Classes have two Categories, **[Base]** and **[Advanced]**. [Base] Classes tend to have generic tools that support a playstyle of your choice, while [Advanced] Classes tend to be more specific in how the associated playstyle is expressed. All Fighters are good at punching Pokemon but Berserkers specialize in doing so while enraged.

Note - GMs should be wary of Characters that take multiple [Advanced] Classes from the same [Base] Class. These builds tend to be way more synergistic, minmaxy and lead to builds that are hyper specific but not versatile. It used to be a rule of only having 1 Advanced Class from a root [Base] but we will instead have that be a home rule where GMs can ban certain combos like stacking tons of Damage Reduction from Defender Classes.

Pokemon

Of course, a Pokemon Trainer is also defined by the Pokemon they train and own. Each Player can carry up to 3 Pokemon at a time to consist of their Party, but can own and train as many as they want! And the leveling system is simple enough where Pokemon don't have to undergo grinding or sit in the box for ages before they can be used.

Understanding PTE Text

Features, Orders and Traits are a large mechanical basis of your Character, and as such you should learn how to read and comprehend them! Below is an example of a Feature that has been labeled

NAME	Gladiator
TAGS	[Class][Advanced] Prerequisite 1: Fighter or Provocateur [or] Prerequisite 2: Adept Combat and Novice Charm or Command
FREQ.	At-Will - Free Action Trigger: You Provoke an Enemy, an Attack misses you or you cause an Enemy to faint with an Attack. Effect: You gain +1 Glory Counter (Max 6). For each Glory Counter you have, you have a +1 Modifier to Accuracy for Melee Attacks. Whenever you Faint or at the end of the Scene, you lose all Glory Counters. Whenever your Pokemon Faint, you lose half of your Glory Counters (Rounded Down). Bonus: You learn the Taunt Attack. Note: If you provoke or faint multiple enemies with the same instance, you only get 1 Counter.

The **Name** is simply the name of the Feature. When performing data entry for your Trainer, this name will pull up all of its information

The **Tags** convey the information about the Feature. The following Feature Tags that you will find are listed below.

» **[Class]** - You can only have 4 Features with the [Class] Tag. [Class] Features are always the first feature in a Class, which qualifies you to take further Features in that Class!

» **[Base]** - Some Classes will have the [Base] Tag. This Tag is to signify that this Class is designed around a general playstyle and its features grant tools to support that concept. These classes are also one method of qualifying for [Adv] Classes, such as taking Marksman which qualifies you to take the Sniper Class.

» **[Advanced]** - Advanced Classes are meant to be specialized in design around a specific concept based on one of their [Base] Classes. This Tag and [Base] are tags notifying its category and hierarchy, not having any mechanical distinction or restrictions of its own.

» **[Order]** - Orders can only be given while the User is able to communicate with their Target. They may be used as if it had the Priority Keyword, letting it be used after any Action resolves.

» **[Ranked X]** - Features with the Ranked Tag may be taken up to X times. Each time you take a new rank, follow the Effect under that Rank. In order to meet the prerequisites for each Rank, you must have taken the previous Ranks and meet any listed Prerequisite under that specific Rank. Each Rank is treated as a different Feature, for the sake of needing X amount of Class Features, for example.

The **Prerequisites** lists the minimum requirements needed to take the Feature. If there are two sets of Prerequisites, **you only need to meet one** in order to take it, so in order to take the Gladiator Feature, you need either the Fighter Feature or at least Adept Combat and at least Novice Charm or Command. (If you have Master Combat, you qualify because you exceed the Prerequisites)

The **Frequency / Action** of a Feature lists how often you can use this Feature and what Action it takes to activate it.

Gladiator is an At-Will Feature that can be used as a Free Action. Frequencies you will see on Features are as follows:

» **At-Will** - These Features have no restriction on how often they can be used

» **Static** - These Features are always in effect and treated as "Passives".

» **Scene xY** - This means you can only use the Feature Y amount of times during the Scene. If [xY] isn't shown, it can only be used once per Scene.

» **Bind X** - These Features may be bound to a number of Targets equal to X. Each time this Feature is used, you must choose a new Target to Bind its effects to. Whenever a Target is bound, it persists even after a Scene is completed and carries into new Scenes.

Conditions that are listed must be true in order to use Effect.

Targets specify what Combatants the Effect will apply to.

Triggers specify what needs to happen in order to use this Effect and cannot be used otherwise. Triggers can only lead to one activation per instance, so even if multiple requirements of a condition are met, it can only activate once. Effects that have a Trigger attached are able to be used when it isn't the user's Turn. Triggers occur immediately once their condition is met, and the interrupted action does not resume until the Trigger's Effect is resolved. If you do not have an available Action that is required for the Effect to activate, it cannot be Triggered. For instance, if I already used my Trainer's Reaction this Round, I cannot Trigger the Attack of Opportunity Maneuver again until the start of the next Round.

The **Effect** determines its details and what it does upon activation. Attack Effects always occur after the Attack is resolved, unless stated otherwise.

The **Bonus** line in a Feature is an additional Effect, however it is always treated as a Static Frequency and is separated from the main effect and activations of the feature.

Skills

The Attributes of your Trainer and what they're good at is measured in what are known as **Skills** and **Skill Ranks**. Skills represent a Character's conscious interest, training and are used to measure if someone is successful at a task through **Skill Checks**. When you perform a Skill Check, refer to the value listed next to your corresponding Skill Rank and that'll be how many d6's your dice pool consists of. (More info on Skill Checks will be in that section)

There are **7 Ranks of Skills**, each rank causing you to roll a different number of dice when performing a Skill Check. **At Character Creation**, all Trainers start with their Skills at Untrained (Rank 2), which at Level 1 they adjust 3 to Novice (Rank 3), 1 to Adept (Rank 4) and 3 to Pathetic (Rank 1).

Every level-up beyond that, you're able to forgo taking a Talent to improve the Rank of one of your Skills by one Rank. The only Skill Rank that deviates from the standard rule is **Virtuoso Rank**, which is the same Dice Pool as Master Rank. Whenever perform a Skill Check with a Virtuoso Skill, you always gain a Boon towards the roll. **However, you can only have one Skill with the Virtuoso Rank.**

Rank #	Rank Name	Dice Roll
1	Pathetic	1d6
2	Untrained	2d6
3	Novice	3d6
4	Adept	4d6
5	Expert	5d6
6	Master	6d6
6	Virtuoso	6d6

The last rule regarding Skill Ranks is that **all Ranks above Adept have a Minimum Level Requirement** in before it can be Ranked Up. In order to Rank Up a Skill to **Expert Rank**, you need to be at least Trainer Level 5. In order to Rank up a Skill to **Master Rank**, you need to be at least Level 10. In order to Rank up a Skill to **Virtuoso Rank**, you need to be at least Level 15.

Example (Skill Check)- Theo the Ranger was sent on a mission to track a child that went missing in the forest a week ago and hasn't returned. He heads out to the woods and is asked to perform a Perception or Nature Edu Check. He is told that the Challenge Rating will be Standard, meaning he needs 2 Successes in order to pass.

He performs a Nature Edu Check. He currently has Adept Rank so he rolls a 4d6. His results are 3,5,4,2, resulting in two Successes. The GM informs Theo that through his knowledge of tracking in the wild, he notices some footprints that seem fresh going in a specific direction.

Pokemon Skills

Similar to Trainers, Pokemon also have Skills, albeit they have different Ranks and names when compared to Trainers. Considering Skills potency should change upon evolution, they're separated into 4 Ranks.

Inept - The First and second Stage of a 3 Stage Pokemon or the first stage of a 2 Stage Pokemon has 1d6 in an Inept Skill. The last Evolution of any Pokemon has 2d6. Inept Skills cannot be increased by any means.

Untrained - The first and second stage of a 3 Stage Pokemon or the first stage of a 2 Stage Pokemon has 2d6 in this Skill. The last Evolution Stage of any Pokemon has 3d6.

Proficient - The first stage of a 3 Stage Pokemon has 3d6 in this Skill. The second stage in a 3 Stage Pokemon or the first stage of a 2 Stage Pokemon has 4d6. The last Evolution Stage of any Pokemon has 5d6.

Mastered - The first stage of a 3 Stage Pokemon has 4d6 in this Skill. The second stage in a 3 Stage Pokemon or the first stage of a 2 Stage Pokemon has 5d6. The last Evolution Stage of any Pokemon has 6d6.

Example (Pokemon Skills) - A Charmander has Proficient Combat which means it rolls a 3d6. A Scizor with Proficient Combat rolls 5d6. Scyther with Proficient Combat rolls 4d6. Why? Charmander is the first stage of a 3 Stage Line (Charmander, Charmeleon, Charizard). Scyther is the first stage in a 2 Stage Line (Scyther, Scizor). And Scizor is the last stage of an evolution line.

Skill Categories

Skills are divided into 3 Categories for the sake of organization. They aren't referenced often but can be used for quick reference of what they affect.

Ex: A Player is sleepy so their Body Skills have a penalty.

Body - Acrobatics, Athletics, Combat, Intimidate, Stealth
Spirit - Charm, Command, Focus, Guile, Intuition, Perception

Knowledge - Gen Edu, Med Edu, Nature Edu, Occult Edu, Poke Edu, Tech Edu

Skill List

Below is a list of each Skill, what it controls and enables your Character to be good at, and an example of an Occasion where it'd be requested for a Skill Check.

As a GM, remember that there are some facets of Skills that a Character could be weaker in. Especially for skills like Occult Education, a Trainer may excel in witchcraft but have no knowledge of artificing that isn't common knowledge, despite being under the same skill umbrella. A Character could have a high Combat Rank due to theoretical battle tactics, but be bad at performing maneuvers. This nuance could be factored into Skill Checks by being given a Bane, for example.

Athletics

- » Your ability to perform feats of strength and endurance
- » Your level of physical fitness, health and immunity
- Ex 1:** A Trainer is trying to lift a fairly large boulder
- Ex 2:** A Trainer is trying to see how many beers they can drink before they get drunk

Acrobatics

- » Your ability to be nimble and fleet footed
- » Your ability to perform precise footwork or be swift
- Ex 1:** A Trainer is attempting to jump across a roof in a pursuit
- Ex 2:** A Trainer is running through the city and would trip on a crate

Charm

- » Your ability to soothe and calm others
- » Your ability to be convincing in a persuasive manner
- » The level of physical or psychological attractiveness you can express at will or naturally
- Ex 1:** A Trainer is trying to console a crying Teddiursa that lost its mom
- Ex 2:** A Trainer is trying to get information by flirting with a bartender

Combat

- » Your ability to perform tactics in a battle
- » Your knowledge on battle tactics and how factors would affect combat
- Ex 1:** A Trainer is attempting to gauge what an enemy may do next in battle
- Ex 2:** A Trainer wants to know which attack may deal more damage to a heavily armored enemy

Command

- » Your ability to lead, order and inspire others
- » Your ability to be convincing in an authoritative manner
- Ex 1:** A Trainer orders a wild Pokemon to assist them in a jail break
- Ex 2:** A Trainer speaks to a crowd trying to instill a rebellion

Focus

- » Your ability to concentrate on high precision tasks or when distracted
- » Your ability to perform while distracted or in a high stress situation
- » Your ability to be precise and accurate
- Ex 1:** A Trainer is lockpicking a fairly sturdy and advanced lock
- Ex 2:** A Mime Jr. is trying to hold concentration to the invisible walls it made

Guile

- » Your ability to lie, deceive and manipulate others
- » Your ability to control your body language and expressions
- » Your ability to improvise and use your wit to plan
- Ex 1:** A Trainer comes up with an idea to hide amongst a crowd when escaping enemies
- Ex 2:** A Trainer lies to a guard when they didn't have a permit to enter the city.

Intimidate

- » Your ability to be convincing in a fearful manner
- » Your ability to scare or impose your presence on others
- » The level of physical or psychological fear you can inflict
- Ex 1:** A Trainer attempts to scare off a hostile mimikyu
- Ex 2:** A Trainer is interrogating a prisoner and demands information and threatens them

Intuition

- » Your sensation of instinct and gut feeling to analyze surroundings
- » Your ability to analyze information and gain insight
- » Your ability to discern if something abnormal in a non-physical sense such as behavioral
- Ex 1:** A Trainer can tell something is off when an NPC is attempting to lie to them
- Ex 2:** A Trainer can sense a disturbance in Pokemon around them from an ambush nearby

Perception

- » Your awareness and attentiveness of your surroundings
- » Your ability to discern details and if something is physically abnormal
- » Your ability to see with clarity further distances

Ex 1: A Trainer notices a strange marking on the armor of a Golurk, like an insignia

Ex 2: A Trainer spots a Kecleon that is attempting to ambush the party in hiding

Stealth

- » Your ability to stay undetected from others
- » Your ability to perform sleight of hand

Ex 1: A Trainer attempts to pickpocket a passerby while their friend talks to them

Ex 2: A Trainer is performing a magic trick and doesn't want the trick to be discovered

General Education [Gen Edu]

- » Your ability to recall knowledge that doesn't fall under any other category
- » Your knowledge on History, Cultural or Geographical Information

Ex 1: A Trainer recalls information on a war in Kalos

Ex 2: A Trainer remembers information about a famous mafia boss in Kanto

Medicine Education [Med Edu]

- » Your ability to understand the anatomy and biology of living creatures
- » Your ability to use medicinal items and perform medical procedures
- » Your ability to discern afflictions and ailments and how to treat them

Ex 1: A Trainer is able to use medical tools to bandage a gash on a nidorino

Ex 2: A Trainer is able to treat a burn wound on their ally without it causing worse damage

Nature Education [Nature Edu]

- » Your knowledge of nature, flora and ecosystems
- » Your knowledge of undomesticated wild Pokemon
- » Your ability to survive in the wild or perform activities in the nature

Ex 1: A Trainer recognizes that this cluster of mushroom are indeed poisonous

Ex 2: A Trainer recalls on how to start a campfire in the middle of the woods to set up camp

Occult Education [Occult Edu]

- » Your knowledge on any supernatural or mystical subject unique to your setting

Ex 1: This can include magical forces of reality, religion, mythical forces or ghosts.

Ex 2: A Trainer recognizes material used for a ritual to summon Darkrai

Ex 3: A Trainer is aware of the history of Moltres and the past Trainers that commanded it

Pokemon Education [Poke Edu]

- » Your Knowledge on Pokemon Biology, Behaviors and their Habitats

- » Your ability to interact with Pokemon

Ex 1: A Trainer is observing foot prints and recognizes it is a Mightyena

Ex 2: A Trainer remembers that Scrafty bond by being mischievous together rather than charming and social.

Technology Education [Tech Edu]

- » Your ability to understand, manipulate or create Technology unique to your setting

Ex 1: A Trainer is reviewing a security camera system to see if they can delete footage

Ex 2: A Trainer wishes to hack a Villain's Pokeball in order to release the Pokemon they stole

Skill Checks

For this section, let's say we have a rogue Trainer who is a part of team rocket named James. In order to determine how James succeeds or fails when interacting with the world, he'll perform Skill Checks that test his capabilities, each of which having a **Challenge Rating (CR)** which means he needs an **equal or greater number of successes than the CR** to beat the Skill Check.

By default, all die results of 4 or higher are counted as 1 Success. (This can be adjusted with Boons & Banes). However, any results of **6 are counted as 2 Successes instead of 1!**

There are multiple types of Skill Checks that a GM can choose from listed below, and when decided, the GM will also set its CR, determine any Boons or Banes, then they'll list all Skills that are applicable for this Skill Check. Once this is done, the Player will roll their dice pool for the relevant Skill and count the number of successes to see if they beat the CR.

Ex: If a Player has Adept Occult Edu and is looking at an artifact to gauge its origins, they'll roll a 4d6. The check is deemed to be Tough CR (3). They roll a 6,4,4,1. This results in 4 Successes and they pass

Below is a step by step list of questions to ask when creating a Skill Check:

1. What Type of Skill Check is it?

Listed below there are multiple types of Skill Checks, including Basic, Opposed, Group or Luck Checks.

2. How difficult is the Skill Check

There are 6 levels of difficulty, listed in the Challenge Rating section. These levels are **Trivial, Standard, Tough, Severe, Extreme and Nearly Impossible**. The Challenge Rating will determine how many successes the Character needs in order to pass the check.

3. What Skills can be used for this Task?

Oftentimes multiple Skill can apply to a single skill check so negotiate with the table on what would make most sense.

4. What happens on a Success or Failure?

The GM will finally decide what occurs based on how many Successes they got compared to how many were needed.

Basic Skill Check

Basic Skill Checks are when a Character interacts with a non-Character entity that has a static difficulty. Alternatively this could be a Character entity that isn't opposing you or contesting your attempt. This can include attempting to recall information, attempting to break down a door or trying to navigate precarious terrain!

Ex: James is attempting to scavenge for some plants that can create dye he needs for a disguise. The GM determines the CR is Simple, considering the area he went to is abundant with them. They also set the Skill to either be Perception or Nature Edu of their choice. James uses his Untrained Rank Perception, rolling a 1 and 4, thus passing the check.

Opposed Skill Check

Opposed Skill Checks are always when a Character interacts with another living entity that can oppose the Character's attempts. When choosing this, pick which Skill(s) will be used to perform the task and which will be used to oppose the task. Then, count the number of Successes on each side. Whichever side has more Successes wins the opposed check. If they have equal Successes, instead, add the value of all rolled die and whichever is higher wins the check.

Ex: James is attempting to pickpocket a merchant while they talk to a customer. It will be a Stealth Roll (Expert) opposed by the Merchant's Perception (Adept). James rolls a 4,2,5,3,3 resulting in 2 Successes. The merchant rolls 4,2,3,1 resulting in 1 Success. James wins this Opposed Check.

Group Skill Check

Group Skill Checks are Skill Checks that involve all or at least 3+ Characters performing the same task, each having the ability to fail. When performing this, take the Challenge Rating, then add to it equal to the number of Characters participating in this check. All Characters will then perform the Skill Check and the group counts their total Successes.

Ex: James and his gang of 3 grunts attempt to sneak through a town hall while a ceremony is going on. It is deemed to be a Stealth Check with a CR of Tough. There are 4 Characters so the Tough Challenge (3) plus the Characters (4) equal a total CR of 7. The group all rolls and gets a total of 5 Successes, leading to a failure and they're spotted by a waitress.

Luck Check

A Luck Check is something that is the opposite of Skill Checks. Whenever you want randomness in a result, perform this. To do so, simply roll a d20. The GM will set a range of outcomes depending on the task. A 3 or less is usually a very bad result. A 4-10 is an average result. 11-16 is a good result. A 17+ is a very good result. And a 20+ is a very lucky result! These are also known as Luck Rolls.

Challenge Ratings

There are 6 Levels of Difficulty a task can be, known as the **Challenge Rating of a Skill Check (Abbreviated as CR)**, listed below.

Challenge Rating	# of Successes Needed	Skill Checks of this CR...
Trivial	1+	...Are relatively easy but can be messed up by someone who has no clue what they're doing or is being careless.
Standard	2+	...Require a minimum level of competence or a bit of luck to accomplish.
Tough	3+	...Are very difficult for someone without experience but is a fairly typical task for someone with it.
Severe	4+	...Are anything that someone without experience would have no clue how to complete. Even with training, it would be difficult and can sometimes fail.
Extreme	5+	...Are only achievable by or with the assistance of individuals that are very talented in this Skill.
Nearly Impossible	8+	... Are the toughest of tasks, even for those who are well versed in this Skill.

The Challenge Rating depends on the inherent difficulty of the task. If context involving the Player would make a CR easier or more difficult, those are resolved with applying Boons or Banes to the check.

Remember, their experience in the Skill is already determined by their Skill Rank so being skilled doesn't justify a lower CR, it is made easier by having a greater chance at success

Example (Varying CR): The Party comes across a wooden door that is locked. The door is fairly fragile but still requires a bit of force to break, requiring a Tough CR (3) for one of the Trainers. He only has an Athletics Rank of Novice (3d6) so he sends out his Machamp to punch a hole through it. The Challenge Rating is still Tough, even if the Machamp does it. The Rating is dependent on how hard it is to complete the task, regardless of who is doing it. It would be easier for the Machamp to accomplish because he has a much higher Athletics Rank than his Trainer but it doesn't mean the CR becomes lower when he performs it.

Example (Applying Context): There are 2 Trainers that both have Expert Stealth and they're confronted by a high tech padlock. The difficulty of this task would deem that the Challenge Rating be Severe (4). One Trainer has an Adept Tech Edu and has experienced that lock in the past, leading to him gaining a Boon to the roll. The other Trainer, while skilled at picking normal locks, has Pathetic Tech Edu and would have a rough time picking this lock, leading to them gaining a Bane to this roll.

Below are some examples of Scenarios in which a Skill Check is used and their corresponding Challenge Ratings.

Example (Basic Check): James prepares a disguise as a server at a wedding. He rolls a Guile Check vs the initial wave of employees to gain entry without suspicion. The GM determines this to be easy with a Trivial CR (1). This is due to his disguise being convincing so they wouldn't have a reason to be suspicious immediately. He has an Adept Guile and rolls, resulting in a 3,4,2,1, leading to 1 Success and he passes the Check. He gets a few glances but nobody calls him out on it.

Example (Opposed Check): James then runs into a supervisor who doesn't recognize him as working there. He lies and says he's covering someone else's shift, resulting in an opposed Guile vs Intuition Check. James has a flaw that he's gets nervous when he lies but his Guile is good because he's great at disguises. This results in his check being made with a Bane. The Manager also has Expert Intuition. James rolls a 4,5,3,1 resulting in one success because of the Bane. The Manager also has a Bane since James has a Disguise equipped and they're trying to discern his identity, then he rolls a 4,2,4,1,6, resulting in two successes. The Manager wins the opposed check and gets suspicious, calling him out.

Example (Negotiating a Check): James decides to run away through the kitchen and halls of the palace, attempting to find a hiding spot where he can lose the supervisor. The area has a lot of places to hide so the CR would be Standard (2), but considering he's panicking, he'll have a Bane to this Perception or Stealth Check. The Player asks the GM if he can perform a Focus Check to remove the Bane, which he passes, allowing James to calm down for a second to find a hiding spot. He has an Adept Stealth, which he rolls and results in a 4,2,5,3, being 2 Successes, finding a cabinet he could lose the Manager. If the Bane wasn't removed, he would have failed this check!

Boons & Banes

So if your experience in a Skill is determined by your Skill Rank, and Challenge Rating is determined by the inherent difficulty of the task, how do you factor in context of who is performing the challenge and what may make it easier or harder? This is accomplished with **Boons & Banes!**

By default, a Success is a dice that rolled a 4+ (Coined your Success Value). But with Boons & Banes, what determines a success is altered. **If you have a Boon, the Success Value becomes 3+. If you have a Bane, the Success Value becomes 5+.** If a Roll would be affected by a Bane and a Boon, they cancel out one for one.

Ways to gain Boons

- » Circumstances in the Scene would lead you to have an Advantage
- » Your Personality or Character Qualities would lead you to have an Advantage
- » You've passed a Skill Check from this specific task before in the past
- » You invest time into learning about a specific topic

Ways to gain Banes

- » The Check is for a Skill you have a high rank in but aren't knowledgeable in
- » Circumstances in the Scene would lead you to have a Disadvantage
- » Your Personality or Character Qualities would hinder your attempt to do this task

Below are some examples of Scenarios in which a Skill Check would gain a Boon or Bane, with each of the ways above listed.

Example (Scene Advantage): A Character is chasing an assailant through a city throughout alleyways. They grew up in this city and have the Naturewalk (Urban) so they would know the city like the back of their hand, giving them an advantage and a Boon in any related Skill Checks

Example (Quality Advantage): A Character is very timid and tries to socialize with their Ralts, who is also timid. Due to their personalities matching they can empathise better and they gain a Boon to their Skill Check for the Downtime Action.

Example (Past Check Advantage): A Character has lived with their brother all their life and knows he's a chronic liar. They gain a Boon for an Intuition Check to discern if he's telling the truth this time. A Character has hacked into a computer at a previous team rocket base and is hacking into another that has the same security and is the same type of system.

Example (Time Investment): A Player Researches about local mythology in Lumiose City and gains a Boon whenever they perform a Skill Check against the creatures they researched about

Example (Skill Disadvantage): A Character is an herbalist that has lived in the City all her life. They have Expert Nature Edu but only because they know everything about herbs. When they do a Nature Edu Check for surviving in the wild, that isn't something they'd be an Expert Rank in and they get a Bane. A Character has good Occult Edu for ghost knowledge but would know nothing about Ultra Beast Mythology.

Example (Scene Disadvantage): A Character is trying to find a crucial piece of evidence in the office of the mayor. They hear someone arrive in the home unexpectedly, causing a panic and rush to find it. They fail their Focus Check which would have kept their cool, resulting in a Bane for their Perception Check.

Example (Quality Disadvantage): A Character is performing their first concert in a major venue! They're used to smaller crowds and have extreme stage fright. Despite being great at playing music they perform the roll with a Bane to account for being nervous.

Degrees of Success

So what is the benefit of measuring Skill Checks via Successes instead of adding all the numbers vs a Target Number? One major benefit is that it allows you to easily implement variable success levels, allowing the GM to cater the result of the Skill Check based on how much you succeeded or failed by.

When a Skill Check occurs and the Challenge Rating is determined, the GM will have an idea of what happens depending on how many successes you exceed or fail by the CR's Value. The Table below will show what type of result will typically happen whenever you pass or fail a Skill Check. Underneath the table will also go over a list of examples and how they determine the result. **(Failing a Trivial CR Skill Check always results in a Moderate or Critical Failure)**

GM Note: Just because a Character rolled a Moderate or Critical Failure doesn't mean there needs to be penalties other than not succeeding. If a Skill Check is low stakes they just get the worst possible outcome, which sometimes isn't that bad! If a Player makes a Skill Check for noticing a tattoo hidden on the forearm of their rival and they have a Critical Failure, they simply don't notice it, nothing bad happens.

Skill Check Result	Successes Noted	Typical Outcome
Critical Failure	2 or less Successes than the CR + more than half of the dice resulted in a "1"	They don't succeed and whatever they tried backfires in some way, likely the worst possible outcome
Moderate Failure	2 or less Successes than the CR	They don't succeed in their task and they suffer some kind of setback or penalty as a result
Basic Failure	1 less Success than the CR	They don't succeed in their task but they don't suffer any meaningful penalties, trivial if any.
Basic Success	Success equals the CR	They succeed in their task and get an outcome of what was to be expected
Moderate Success	1 Success more than the CR	They succeed in their task and the outcome was better than expected.
Critical Success	2+ Successes more than the CR	They succeed in their task and the outcome was the best they could've hoped for, possibly gaining more than what they anticipated.

Scenario- James is attempting to cook a lavish meal for a governor as part of a ruse at one of their parties. He needs to distract the Mayor while his teammates survey his house. He is impersonating the Governor's private chef. The following is what the GM deems happens on each possible result.

Critical Failure - Though highly, highly improbable, on a Critical Failure, something unexpected happens and James sets the timer on for the wrong time, burning the meal and making it unservable. The governor gets angry and wants to have a word with his chef...who he doesn't realize was replaced by James.

Moderate Failure - James was unfamiliar with the meal he wanted and ended up cooking to the best of his ability...which didn't end well. It was edible but it certainly wasn't tasty and the governor lost his appetite, leaving dinner early and risking his teammates being found out.

Basic Failure - James ended up cooking the meal, it just wasn't to his own standard, ruining his ego and making the governor slightly suspicious.

Basic Success - James ended up cooking the meal fairly well. The governor ate as normal and everything went as planned.

Moderate Success - The meal was extremely good and the governor was distracted for even longer than expected, savoring every bite.

Critical Success - The meal was so delicious that the governor was distracted for even longer, savoring every bite. He even ignores a security alert from his phone because he was enthralled by dinner. When meeting James later, he also gets a Boon when lying to the Governor, saying he's a friend of the chef, because he was so good at cooking that the lie is believable.

Skill Check Modifiers

Whenever a Pokemon or Trainer would perform a Skill Check, either as a Downtime Action or during Narrative Play, they can enact various modifiers listed below in order to improve their odds of success.

Assistance

Whenever a Skill Check would be made, an ally may assist in the task with GM approval. When they enact an Assistance Modifier, they must declare how they're helping and assign a Skill to it. The GM may require a Skill Check by the Player to determine if it helps them but usually it doesn't need a check.

Once approved, the Character that is being assisted will add 1d6 to their Die Pool (But cannot exceed 6d6). If the Assisting Ally has at least Expert Rank in their assigned Skill, they also apply a Boon to the assisted Skill Check. An Assisted Skill Check can only be affected by one ally, otherwise it becomes a Group Skill Check.

Ex (Opposing): Because he failed a Perception Check, James didn't realize there were 2 more merchants nearby that were also able to notice a thief attempting to steal from a Vendor. He was performing a Stealth Check opposed by the Vendor's Perception, however, now the Vendor gains +1d6 and a Boon due to being assisted by the nearby Merchants.

Ex (Assisting): James is attempting to pickpocket a merchant while his friend is talking to them and being a distraction. The friend assigns that they're assisting with the Command Skill to serve as keeping the Vendor's attention. They have Expert Command, which grants James a +1d6 to their Stealth Check as well as giving him a Boon in it..

Routine

Players may enact the Routine Skill Modifier when they perform a Skill Check that doesn't have any risk or stress attached to it. If that applies, instead of rolling, they take half of their Dice Pool (Rounded Down) and treat that as the number of successes they got.

GM Note - As a GM, you may reject any of the following modifiers to be applied to a roll. For example, if a situation has little to no chance of success such as a bad speech, no amount of exertion will allow them to succeed so asking for it should be denied.

If the Players have no way of directly assisting with a check, the Assistance Modifier can't be used either

Exertion

After you roll a Skill Check, you may declare that you're using the Exertion Modifier. Describe how you overexert yourself or put extra effort into this in Character. When you do so, and if approved by the GM, reroll the Skill Check and take the new result.

If you succeed on the rerolled Skill Check, you suffer a Minor Setback. If you fail on the rerolled Skill Check, you receive a Major Setback, usually forcing a Critical Failure regardless of how much you failed by.

Before you decide to use the Exertion Modifier, the GM will tell you the general consequences that may occur as a result of it.

Ex (Describing Consequences): A Character is performing a high speed chase in a city, jumping over rooftops in pursuit. They fail an Acrobatics check when jumping over a gap between buildings and decide to use the Exertion modifier so they don't plummet to intense pain. The GM will state that if they don't do Exertion they could possibly catch something that breaks their fall. However, if they do so, on a success they'll make it to the other side but get injured in the process. But if they fail they won't be able to break their fall and will get very much hurt in the process.

The Player decides to test their luck and rerolls it, passing barely and as they make it to the other side, they lose their footing and tumble, gaining the Wounded Affliction and losing 3 Ticks of HP.

Ex (Light Consequence): A Character isn't great at being stealthy and while traveling with the group on a heist, fails the check by one success. They perform the Exertion Modifier to reroll and they pass. The Player suggests that while they're focused on being stealthy, they'll accidentally drop a locket of their missing lover and not notice it. Another player will have to make a Perception check to notice it.

Ex (Double Failure): A Character is making an important speech. After failing the check and realizing that the crowd isn't responding with enthusiasm, they enact the Exertion Modifier and describe themselves ramping up the energy to get the crowd engaged. They Roll once more but fail again. The crowd becomes irate at the speech and begin throwing harsh words and rotten fruit at the speaker.

Action Types

At the start of each Round, all Combatants get a set of Actions (**Max 2 sets of Actions per Player between all their controlled Combatants**). These Actions can be used when the Combatant gains Initiative, or outside of their Turn if it has a Trigger. If a Trainer has multiple Pokemon on the Field, they may distribute their second set of Actions among their active Pokemon as they see fit, with the first set being solely for the Trainer's Turn. A set of Actions consist of the following:

» A Standard Action | A Swift Action
A Movement Action | A Reaction

Note: Basically, if you have one Pokemon out and you are participating in combat as a trainer, you both get the actions above. If you have two Pokemon active on the field, you can split the actions from the second set between them. So your active Poochyena could move with Movement Action while your active Chimchar uses a Standard Action for ember.

Standard Actions

Attacks and many Features require a Standard Action to activate and use. You may use a Standard Action to use the following:

- » Using an Attack from your Attack List
- » Using an Item in your Inventory
- » Using some Combat Maneuvers
- » Using some Features or Abilities
- » At any Time, you may use a Standard Action to gain an Action below.
 - » Swift Action, Reaction or Movement Action.

Swift Actions

You may use Swift Actions to perform any of the following:

- » Giving an Adjacent Ally an Item from your Inventory (Or Switching Items)
- » Equipping or Unequipping an Item from your Inventory or Equipment Slots
- » Using some Combat Maneuvers
- » Using Attacks through the Versatile Keyword
- » Using some Features or Abilities
- » Charge a Set-Up Attack
- » Use some Features or Abilities

Full Actions

Whenever something mentions a Full Action, it requires you use both your **Standard and Swift** Action in order to perform it. This can include some Attacks, or strong Features.

Reactions

Reactions are an Action type that are usually tied to Features or Abilities that can be Triggered by a condition occurring. Like other Actions, you only have one Reaction per Round for your set of Actions.

Movement Actions

The Movement Action is the most straightforward action; it's simply used for Movement most of the time. You may use Movement Actions to perform any of the following:

- » You may move your Character any number of spaces, obeying the following properties:
 - You may not exceed your Movement Value in spaces moved per Movement Action
 - You may not split up your movement between your other Actions- that would require the use of an additional Movement Action. (Ex: Move 3, Attack, Move 3)
- » Returning a Pokémon, **or** sending out a Pokémon
- » Returning a Fainted Pokémon **and** sending out a replacement Pokémon
- » Certain Features, Abilities or Combat Maneuvers

Free Actions

Many features or abilities can be activated as Free Actions. You can activate as many Free Actions as you like on your Turn, or once when they are triggered, per resolving instance. Unless they are Triggered, Free Actions still can only be used on your Turn and cannot be used in the middle of other actions.

Extended Actions

Extended Actions take at least a few minutes to complete, depending on the task. If unspecified, assume at least a few minutes with concentration adequate to the task. Simply, these actions cannot be performed in the middle of a combat scene.

Combat Stats

Pokemon Tabletop Evolution uses the same Stat Concepts similar to the mainline games, however they function slightly differently in regards to calculations and what they can do in battle.

These 6 Stats are known as **HP, Attack, Special Attack, Defense, Special Defense and Speed**

HP (Hit Points)

HP Stat Values determine your Hit Points and your ability to take hits in combat and remain conscious. If a Combatant would reach 0 Hit Points, they gain the Fainted Condition and are unable to take actions. Hit Points are calculated differently for Pokemon and Trainers using the following Equation

Trainer Hit Points - $\text{Trainer Level} \times 5 + (\text{HP} \times 3) + 10$

Pokemon Hit Points - $\text{Pokemon Level} + (\text{HP} \times 3) + 10$

Attack

Attack Values determine how hard you can hit **Physical** Attacks. When performing Damage Rolls, you add your Attack Value as the Offensive Stat for Physical Category Attacks.

Special Attack

Special Attack Values determine how hard you can hit **Special** Attacks. When performing Damage Rolls, you add your Special Attack Value as the Offensive Stat for Special Category Attacks.

Defense

Defense Values determine how easy it is to avoid Physical Attacks and your ability to endure damage from Physical Attacks. Whenever a Combatant is hit by a Physical Attack, they subtract their Defense Stat from the damage first before applying Damage to their Hit Points. Additionally, for every 5 Points a Combatant has in Defense, they gain +1 Physical Evasion, up to a Maximum of +6. Evasion gained this way does not apply to Special or Status Attacks.

Special Defense

Special Defense Values determine how easy it is to avoid Special Attacks and your ability to endure damage from Special Attacks. Whenever a Combatant is hit by a Special Attack, they subtract their Special Defense Stat from the damage first before applying Damage to their Hit Points. Additionally, for every 5 Points a Combatant has in Special Defense, they gain +1 Special Evasion, up to a Maximum of +6. Evasion gained this way does not apply to Physical or Status Attacks.

Speed

Speed Values determine a few things. Every 5 Points a Combatant has in Speed, they gain +1 Evasion, up to a Maximum of +6. Unlike Special or Physical Evasion, this can be applied to any opposing Attacks. Additionally, for every 5 Points a Combatant has in Speed, they have a +1 Modifier to Initiative Checks.

Temporary Hit Points

Some effects grant Temporary Hit Points which serve as a shield and HP Buffer for combatants. If a Pokemon is recalled with Temporary HP, it is lost.

Temporary Hit Points are “bonus” health that stacks on top of “real” Hit Points- so you can benefit from gaining it even if you are already at full health. However, Temporary Hit Points are always lost first from damage or HP Loss effects. Damage carries over directly to real Hit Points once the Temporary Hit Points are lost. Furthermore, Temporary Hit Points do not stack with other Temporary Hit Points – only the highest value applies.

For example, if you have 10 Temporary Hit Points, and then gain 8 Temporary Hit Points- nothing happens. If the next turn you were then to gain 15 Temporary Hit Points, your Temporary Hit Points would go up to 15 Temporary Hit Points also do not stack with “Real” Hit Points for the purposes of determining percentages of Hit Points. If a Pokémon has exactly 1 real Hit Point and has 50 Temporary Hit Points, they would use the Moves and effects as if they have 1 Hit Point, not 51.

Glass Cannon Rule

Whenever you level up as a Trainer or Pokemon, you can invest Level-Up Points into Stats and grow stronger, which is great! But there is one rule you must follow when leveling up and investing Points.

You cannot have more than half of your total gained Stat Points invested in one stat.

Note: This rule may be ignored if you intend to split between two stats. Due to the nature of leveling up, if I want to end up to 50% in HP and 50% in Speed with no other investment, leveling up to level 2 will lead me to have 10 invested in HP and 5 in Speed which breaks this rule. However with this intent in mind, the rule would be resolved next level when they put 5 points in speed for 10 in each. Just inform your GM first.

The idea of this rule is basically to prevent people from dumping all their Points into Attack and crumpling if they're attacked even once. Not fun.

Combat Values

In addition to Combat Stats, there are other Values that affect Combat in some ways. Most of these values can be changed temporarily for a duration in combat but some sources may lead to permanent modifiers in these categories.

Note: As a general rule of thumb, **Modifier Bonuses cannot exceed +6** in value and **Penalties to Combat Values cannot exceed -6**. If you would have a -2 Penalty to Accuracy but you're already Blinded and have -6, the -2 is ignored. However if you have a positive modifier while exceeding this threshold, it does not ignore it. If you have a total of -8 Accuracy and gain +2, you still have -6 Accuracy.

Accuracy

Accuracy Values are applied to your Accuracy Rolls and added as a Modifier. **You cannot have an Accuracy Value higher than +6**. In addition, Accuracy rolls that are modified by an Accuracy value do not lead to an Effect Range or Crit Range triggering, as it must be a **Natural Roll**. If an Effect Range is 17+, and you roll a 15 but have a +3 Accuracy Modifier, the final result is 18, but it does not trigger the Effect Range.

Effect Range

Effect Range Values are modifiers that you may use to extend Effect Ranges of Attacks you use. If you have a +2 to Effect Ranges, an Attack with a 18+ Effect Range to Burn the Target becomes 16+ instead. **You cannot have an Effect Range Modifier that exceeds +6**. So the 18+ Effect Range can never exceed 12+. Sources such as Serene Grace (Ability) may improve Effect Ranges. If an Effect Range has a penalty/negative modifier, it adds to the Effect Range. For example, a 15+ Effect Range to Burn a Target with a -2 Penalty to Effect Ranges would result in a 17+ Effect Range. This cannot exceed a range of 20+ to result in never applying the Effect Range. A specific Effect Range Modifier always stacks alongside generic modifiers for the sake of being a maximum of +6. For example, if Electric Specialist increases Paralyzed Ranges by +1, they can only benefit from +5 more Effect Range increases.

Save Checks

Save Check Values are applied to your Save Checks whenever you roll them. These allow you to cure afflictions easier but modifiers gained this way **cannot exceed +6**.

Critical Hit Range

Critical Hit Range, also known as Crit Range, is a modifier that is used to extend the number needed to become a Critical Hit. Some Attacks may have a larger range at which it can lead to a Critical Hit, **but most are default at a natural 20**. **You cannot have a Crit Range Modifier that exceeds +6**. So Leaf Blade with a Crit Range of 17+, can never exceed 11+. Sources such as Super Luck (Ability) may improve Crit Range. If an Crit Range has a penalty/negative modifier, it adds to the Crit Range. For example, a 15+ Crit Range with a -2 Penalty to Crit Ranges would result in a 17+ Crit Range. This cannot exceed a range of 20+ to result in never being able to Critical hit.

Evasion

Evasion is the Combat Value for determining how Combatants can avoid Attacks. There are two types of Evasion, Specified and General. Specified Evasion only applies to specific types of circumstances. This is rare but is primarily in regards to Physical and Special evasion, derived from the Defense and Special Defense Stat. If a Combatant with 4 Physical Evasion is hit by Confusion, they cannot apply it since the attack is Special. Then there is General Evasion which is usually just called Evasion. This can be applied to any Attack or Maneuver used against you such as from the Speed Stat or from outside sources. When Applying Evasion, you cannot choose more than one Stat Evasion Value to apply and the Evasion cannot exceed a value of 6.

Example (Low Evasion): A Nidoran has 16 Defense (3 Physical Evasion) and 11 Speed (2 Evasion) and 4 Special Defense (0 Special Evasion). They're hit by a Physical Attack like Horn Attack. They apply 3 Evasion against it since it's a Physical Attack. (They choose Defense as their Stat Evasion to apply so they cannot add the 2 Evasion from Speed). If they're hit by a Special Attack like Confusion, they can only apply their 2 Evasion from Speed.

Example (Bonus Evasion): Nidoran from the previous example is holding an Item that grants them +2 Evasion. When they're hit by the same Horn Attack, their Evasion against it instead becomes 5 because they can add bonus Evasion modifiers to their evasion derived from Stats.

Movement

Your Movement Value determines how many spaces you can move when using a Movement Action to move.

By default, all creatures have a Movement Value of 6, however this can be changed through other sources or Movement Capabilities. This can also be temporarily changed during combat.

Size

Your Size refers to how many spaces your Character takes up. This can encompass multiple values such as **Small (1x1), Medium (1x1), Large (2x2), and Huge (3x3).**

Weight Class

Weight Class Values determine how much an Object or Character Weighs. The system rarely references this but refer below to see your Weight Class Value.

» **WC 1 (0-25 lb), WC 2 (25-55 lb), WC 3 (55-110 lb), WC 4 (110-220 lb), WC 5 (220-440 lb), WC 6 (Heavier than 440 lb)**

Power

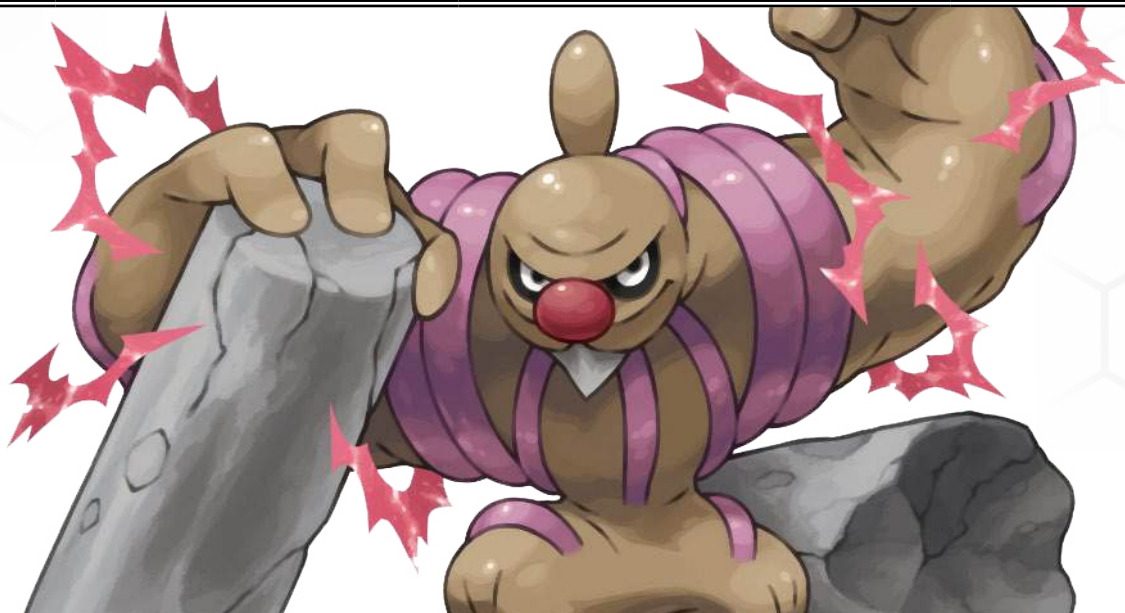

Power is a rough estimate of a Character's physical strength and ability to lift heavy objects. A Trainer's Power Value is equal to your **Athletics + Combat Rank combined (Rounded Up). You cannot have more than 12 Power.**

Carrying Objects

There are three states of carrying objects, **Ease, Staggering and Unable.** If you're able to carry an object with **Ease**, there are no issues but you need an empty Weapon Equipment Slot to carry them (Same with Staggering). If you're able to carry it with **Staggering**, you're Vulnerable and Weakened while carrying it and your Movement Value is halved, but able to do so. If you're **Unable**, you can't pick up the object at all.

The Chart below will list what your Power Value needs to be to carry objects depending on their Weight Class.

WC	Power Value for Ease	Power Value for Staggering	Unable to Carry
1	1+	N/A	N/A
2	4+	3 or Less	N/A
3	7+	4-6	3 or Less
4	10+	7-9	6 or Less
5	11+	8-10	7 or Less
6	N/A	11+	10 or Less

Combat Stages

Many Attacks alter stats by raising or lowering their **Combat Stages (shorthand to CS)**, making them either more or less formidable respectively. Only Attack, Defense, Special Attack, Special Defense and Speed have Combat Stages while HP and Hit Points do not have any.

Attacks and Effects may alter Combat Stages any number of times but **they may never be raised higher than +6 or lower than -6**. For every Combat Stage above 0, a Stat is raised by 20%. This means that if a Stat has raised 6 CS, its affected Stat should be 220% of its original value. For every Combat Stage below , a Stat is lowered by 10%. This means that if a Stat has -6 CS, its affected Stat should be 40% of its original value.

Consult the following chart to see the multipliers for any given Combat Stage. To derive the correct value for a given stat, simply multiply it by the multiplier of its corresponding Combat Stage.

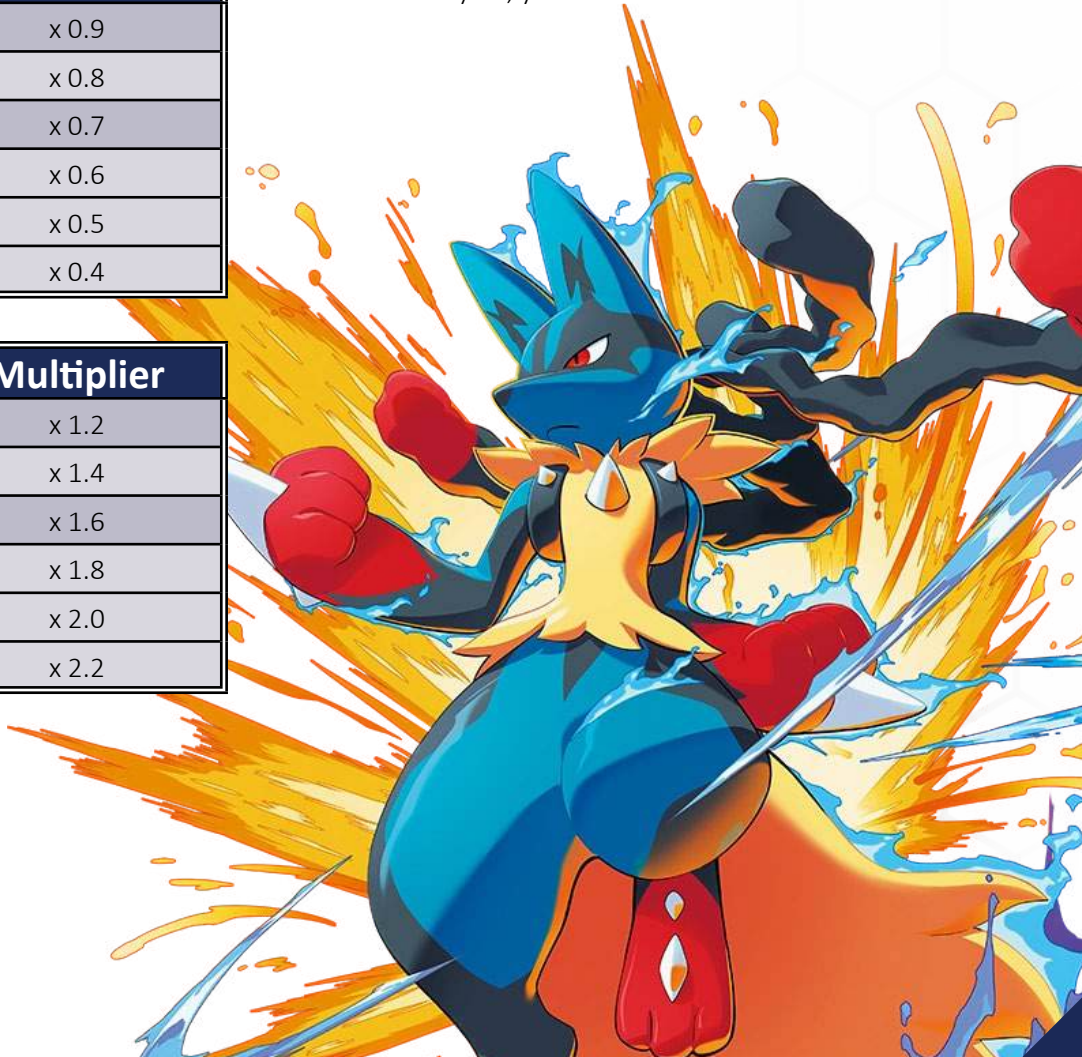

CS (Negative)	Multiplier
-1	x 0.9
-2	x 0.8
-3	x 0.7
-4	x 0.6
-5	x 0.5
-6	x 0.4

CS (Positive)	Multiplier
+1	x 1.2
+2	x 1.4
+3	x 1.6
+4	x 1.8
+5	x 2.0
+6	x 2.2

Additionally, Speed Combat Stages have a special property about them. **For every 2 Combat Stages in Speed, a Character's Movement Value is adjusted by 1**. For example, if a Combatant has -4 CS in Speed, their Movement Value is lowered by -2, resulting in 4 instead of the default of 6. If a Combatant has +2 CS in Speed, they'll gain +1, resulting in 7.

Lastly regarding Combat Stages, there is a concept known as **Default CS Value**. Whenever you enter a Scene, your Combat Stages are reset to their Default CS Value, which is almost always at +0 CS! (This prevents you from sitting in a tree, swords dancing a couple of times then initiating battle)

However some things refer to increasing your Default CS in a Stat. If this occurs, these Combatants will start a Scene with higher Combat Stages! When your Default CS is adjusted, make sure to note the verbiage used. If the Default CS Value is "Set" to a value, it becomes that Value, but if the Default CS Value is "Increased" it takes the value you're set at and improves it. If you have your Default CS for Attack set to +1, then an Item that increases it by +1, your Default CS Value is now +2 CS.

Spirit Points

Spirit Points, or SP, is the pseudo equivalent to Action Points (AP) in PTU.

At the start of each Session, each Trainer and three of their Pokemon gain SP equal to their Tier Level. Players and their Pokemon cannot have more than 6 SP at a time. The GM may also grant SP to **important enemies** at the start of a Scene equal to double their Tier Level. This may include bosses or important characters like a rival or gym leader. The only other way of gaining Spirit Points is through the Training Downtime Action.

SP can be used for any of the following:

1. You may expend any number of SP to add a +2 Uncapped Modifier for each SP expended to **an Accuracy Roll or Save Check** after performing the roll and seeing the result.

Example: Gallade uses Psycho Cut and misses, but spends 2 SP to add +4 to the result.

2. You may expend any number of SP to **add a +1d6 to any Skill Check** for each SP spent before performing the roll. This cannot result in you rolling double or more than your original dice pool (Inept cannot be targeted, Untrained cannot exceed 3d6, Novice Skill cannot exceed 5d6, etc)

Example: A Player attempts to convince a merchant to show them their secret wares. They're untrained and spend 1 SP to roll 3d6.

3. Some Effects that grant Narrative Utility may utilize SP as a resource to either use their effects or improve it further, such as Capabilities.

Example: A Player uses the Illusionist Capability and spends 1 SP to ignore the sensory input restriction, allowing them to create a cake that smells good.

Character Tiers

In order for some effects to remain relevant at different stages of the game and for combat values to be balanced at different stages, some effects may scale through **Level Tiers**. If an Effect refers to a **Tier Value** or **Tier Level**, refer to the number listed under its Tier. You can find your current Tier listed in the paragraph to the right

Note: Tier Values and Tier Levels are not the same thing

Example 1: Anger Point grants a bonus to Damage Rolls equal to their Tier Value while Enraged and a Modifier to Critical Hit equal to their Tier Level.

For Tier 1, this would be a +5 bonus to Damage and +1 Modifier to Critical Hits. For Tier 2, this would be a +10 bonus to Damage and +2 Modifier to Critical Hits. For Tier 3, this would be a +20 bonus to Damage and +3 Modifier to Critical Hits.

Example 2: Effect spore has the Triggering Enemy must pass a Standard CR (2) Athletics Check or else they roll a d3. If the user is Tier 2, it becomes a Tough CR (3) Athletics Check. If the user is Tier 3, they also have a Bane to the Skill Check.

Tier 1

Tier Level: 1

Tier Value: 5

For Trainers: Trainer Level 1 - 4 is Tier 1

For Pokemon: Pokemon Level 1 - 20 is Tier 1

Tier 2

Tier Level: 2

Tier Value: 10

For Trainers: Trainer Level 5 - 9 is Tier 2

For Pokemon: Pokemon Level 21 - 49 is Tier 2

Tier 3

Tier Level: 3

Tier Value: 20

For Trainers: Trainer Level 10+ is Tier 3

For Pokemon: Pokemon Level 50+ is Tier 3

Talents

When you Level-Up, you may also choose to gain Effects known as **Talents** instead of ranking up a skill. This allows your Trainer to gain special perks that either **minorly affect combat** or primarily serve as **narrative or out of combat tools**. If you create homebrew Talents, be sure to make it something that can't be done with a normal Skill Check, such as the ability to identify poisonous mushrooms.

Acute Vision

Prerequisite: Expert Perception

Static

Effect: You gain the Darkvision Capability.

Armorsmith

Prerequisite: Novice Athletics or Focus

Static

Effect: You may craft Crude Armor. At Expert Rank of your qualifying Skill, you may craft Light Armor. At Master Rank you may craft Heavy Armor and if you have Adept Rank Occult Edu, you may also craft Arcane Armor. At Virtuoso Rank you can craft High Quality Light or Heavy Armor.

Ball Crafter

Prerequisite: Adept Tech Edu

Static

Effect: You may craft the Pokeball Item.

Beast Master

Prerequisite: Novice Command or Intimidate

Static

Effect: Whenever you Train or Socialize Pokemon that are disobedient or dislike you, you have a Boon to the Skill Check.

Caravanner

Prerequisite: Novice Athletics

Static

Effect: While you are on an Average or Long Journey, [Large] Items in your Inventory (Not Equipment) are treated as only taking 1 Slot instead of 2.

Confident

Prerequisite: Novice Command

Static

Effect: Whenever you perform a Charm, Guile or Intimidate Skill check, add +1d6 to the roll. If that Skill Rank is equal to or higher than your Command Rank, you instead treat any results of 5 as if you rolled a 6.

Fashionista

Prerequisite: Novice Focus or Gen Edu

Static

Effect: You may craft Survival Clothes, Small Disguises and Small Stylish Clothes. At Expert Rank of your qualifying Skill, you may craft Large Disguises and Large Stylish Clothes.

Fearsome Aura

Prerequisite: Novice Command, Novice Intimidate

Static

Effect: You may qualify for Command Prerequisites as if they were Intimidate instead and vice versa. When you have Expert Command and Intimidate you ignore Banes on Command and Intimidate Checks.

Gymnast

Prerequisite: Adept Acrobatics

Static

Effect: You gain the Jumper Capability

Herb Crafter

Prerequisite: Novice Nature Edu

Static

Effect: You may craft Simple Poultices. At Expert Rank Nature Education, you may craft Greater Poultices.

Home Advantage

Prerequisite: You have the Naturewalk Capability

Static

Effect: Choose a Naturewalk Capability you have. You gain a Boon to Skill Checks while in the chosen Terrain or involving Pokemon that have that Naturewalk Capability. This Boon only applies to Skill Checks related to the Terrain, not just being there. This may be taken multiple times, choosing a different Terrain each time.

Note: An example of an Urban Terrain would be an Acrobatics Check for urban parkour, Charm Check for talking to street vendors or Intuition Check for knowing where a store that sells a specific Item is.

Lapidary

Prerequisite: Novice Focus, Occult Edu or Tech Edu

Static

Effect: You may craft Type Boosters or Type Braces. If you are an Artificer, at Expert Rank of your qualifying Skill, you may craft Type Augmentors, Stat Boosters and Status Guards.

Leatherworker

Prerequisite: Novice Focus, Gen Edu or Poke Edu
Static

Effect: You may craft Light Backpacks. At Adept Rank of your qualifying Skill, you may craft Cargo Bags, Artisan Bags and Pokemon Saddles. At Expert Rank, you may craft Heavy Backpacks.

Lurker

Prerequisite: Master Stealth
Static

Effect: You gain the Dead Silent Capability.

Makeshift Artisan

Prerequisite: None
Static

Effect: Once per Game Day you may perform a Crafting Downtime Action without it taking a Time Phase. Items you create this way are destroyed at the end of the Game Day, however you are refunded all resources used in their creation.

Manipulator

Prerequisite: Novice Guile
Static

Effect: You may qualify for Charm Prerequisites as if they were Guile instead. Once you have Expert Guile, whenever you perform an Opposed Skill Check where the opposer is using a non-Body Skill, they apply a Bane to it.

Masked Aura

Prerequisite: Adept Occult Edu, Adept Focus or Guile
Static

Effect: In order for creatures to perform the Aura Reader or Soul Seer Capability against you, they must make an opposed Focus Check against your Focus or Guile. If they fail, you may tell them what information they see and falsify your true Aura or Soul. This Talent can be ignored if you consent to the Capability usage, such as from an ally.

Medical Brewer

Prerequisite: Novice Med Edu
Static

Effect: You may craft Basic Healing Potions, Malady Potions, Strength Potions and Vitality Potions. At Expert Rank, you may craft Greater Healing Potions, Malady Potions, Strength Potions and Vitality Potions.

Mentor

Prerequisite: Novice Poke Edu
Static

Effect: Whenever you get at least 2 Successes while Training a Pokemon with the Training Downtime Action, you may teach them a Tutor Attack for which they qualify for via Tutor Rules. You cannot teach Tier 2 Tutor Attacks without having at least Adept Poke Edu. You cannot teach Tier 3 Tutor Attacks without having at least Expert Poke Edu

Natural Beauty

Prerequisite: Adept Charm
Static

Effect: You gain the Alluring Capability.

Occult Mastery

Prerequisite: Master Occult Edu
Static

Effect: You learn a difficult Occult Skill that is possible in your Setting

Occult Training

Prerequisite: Novice Occult Edu
Static

Effect: You learn a basic Occult Skill that is possible in your Setting. You may take this Talent multiple times, choosing a different Skill each time.

Note- Occult Training and Mastery are catch'alls, considering any setting may have multiple occult phenomena that is occurring that aren't naturally occurring in the canon Pokemon setting. Examples of this could include True Sight, Teleportation, Telepathy, Telekinesis, Aura Reading, Empathic, Premonition, Invisibility, Soul Seer, etc. Whether they're learned under Training or Mastery is also GM dependent.

Pokemon Specialist

Prerequisite: Novice Poke Edu
Static

Effect: You may craft Basic Pokefood. At Expert Rank Poke Edu, you can craft Typed Pokefood and Pokepuffs.

Pokemon Trainer

Prerequisite: Novice Command or Poke Edu
Static

Effect: When performing the Training Downtime Action, you may choose Pokémon equal to your Command or Poke Edu Rank instead of half of your Command Rank. You gain a Boon for any Socializing or Training Downtime Action involving your Pokemon.

Powerlifter

Prerequisite: Adept Athletics

Static

Effect: Your Power is determined by double your Athletics Rank instead of both your Athletics and Combat Rank.

Researcher

Prerequisite: Any Novice Edu Skill

Static

Effect: Whenever you perform the Innovate or Research Downtime Action, after the Skill Check, add a modifier to the result equal to three times the number of dice that resulted in a 4 or higher. (If you rolled a 3d6 and the result was 3,5,1, the final result will be 12, as you are adding +3 from the '5' result)

Scout

Prerequisite: Expert Nature Edu or Perception

Static

Effect: Whenever your GM performs a Travel Check during a Journey, they must inform you if a result of 9 or less was rolled. You then gain some information about what the Travel Check will result in before your group encounters it. Instead of Encountering it, your group may decide to avoid it, requiring a Skill Check or penalty of some sort, then the Travel Check will be resolved. The difficulty or penalty will depend on what the Travel Check resulted in.

Note- This information could be seeing a massive Nidoking in the distance or hearing crackling thunder of an approaching storm or just an ominous feeling of something up ahead. The clarity of information depends on what was rolled. The penalty or difficulty of the Skill Check also depends on what's rolled. For example, running into the Guardian Mandibuzz of the forest may require a lot of time to figure out a safe route through the forest, taking the entire Afternoon Time Phase but letting them avoid it.

Scavenger

Prerequisite: Novice Nature Edu or Perception

Static

Effect: Whenever you perform the Exploration Downtime Action, roll a d20 Luck Roll. On a 6 or less you find nothing. On a 7-12 you find something worth \$500 or less. On a 13-18 you find something worth \$1,000 or less. On a 19+ you find something worth \$2,000 or less. As a GM you may determine when this Talent is applicable and what they may find depending on their Environment, such as finding spare cash in a city.

GM Note: Just ban this Talent if you would find this tedious.

Skill Specialty

Prerequisite: A Novice Skill

Static

Effect: Choose a Specialty based on one of your qualifying Skills. Whenever you would perform a Skill Check that is related to your Specialty, add 1d6 to the roll (This may exceed 6d6). If your Specialty is deemed to be Niche in application (GM Discretion), you may instead take two Niche Specialties. You may take this Talent multiple times.

GM Note: Below is a list of pre approved Specialties for each Skill they could qualify in. When they take this Talent, negotiate with your player to ensure that their Specialty isn't too generic so it would cover a large portion of related Skill Checks. As an example, Lying to Authorities is fine but a Specialty of just Lying isn't because that's a widespread usage of the Skill. Also, the Effect applies to all Skill Checks related to that Specialty, not being tied to the qualifying skill only.

Skill	Examples
Acrobatics	Balancing, Dancing, Nimble Performances, Parkour
Athletics	Climbing, A Physical Combat Maneuver, Destructive Acts
Charm	Gossiping, Presence, Socializing with a specific Group, Calming Others
Combat	A Specific Combat Maneuver, Using a Specific Weapon, Tactical Insight, Battlefield Awareness
Command	Ordering Subordinates, Coersion, Public Speaking, Motivating Others
Focus	Resisting Mental Influence, Concentration, Acting under Stress
Guile	Disguises, Forgery, Lying to Authority, Diversions, Taunting, Subterfuge
Intimidate	Ordering Subordinates, Coersion, Presence, Threatening, Exploitation, Interrogation
Intuition	Body Language, Danger Sense, Empathy, Gauging Intent
Perception	Detail Orientation, Above average Senses
Stealth	Espionage, Recon, Concealment, Sleight of Hand
Gen Edu	Geography, Trivia, Navigation, History, Local Customs
Med Edu	Alchemy, Anatomy, Identifying Ailments, Surgeries
Nature Edu	Berries, Herbs, Specific Terrain, Pokemon Habitats, Wilderness Survival
Occult Edu	Legendaries, Urban Myths, Any Supernatural Topic, Witchcraft
Poke Edu	Any Specific Type of Pokemon, Any Species line of Pokemon, Any Category of Pokemon
Tech Edu	Hacking, Homebrew Modifications, Repairing, Reverse Engineering, Any Technologic Topic

Socialite

Prerequisite: Adept Charm or Guile

Static

Effect: You gain a Boon for any Socializing Downtime Check involving non-Pokemon NPCs.

Speedster

Prerequisite: Expert Acrobatics

Static

Effect: You gain the Quick Capability.

Strategic

Prerequisite: Novice Intuition or Perception

Static

Effect: You have a Boon to any Skill Check resulting from the Analyze Maneuver. Whenever you perform a Skill Check for the Analyze Maneuver that isn't Intuition or Perception, add a 2d6 to the roll. You cannot exceed 6d6 this way.

Supply Carrier

Prerequisite: Expert Athletics

Static

Effect: You may put Items without the [Equipment] Keyword in your Equipment Slots.

Survivalist

Prerequisite: Novice Nature Edu, GM Approval

Static

Effect: You gain the Naturewalk Capability. You must choose which Terrain this applies to upon gaining this Talent. Your Character must have spent a considerable amount of time in the chosen Terrain to gain this Talent. You may take this Talent multiple times, choosing a different Terrain each time. You cannot take this Talent if you already have at least 3 Naturewalks already.

Swimmer

Prerequisite: Novice Athletics

Static

Effect: You gain the Swimmer Capability

Toned Physique

Prerequisite: Novice Athletics

Static

Effect: You may replace Charm, Command or Intimidate Skill Checks with Athletics if an involved Combatant is a Fighting Type, has Proficient (or Expert+) or above Athletics or Combat or would otherwise respect strength.

Trained Mind

Prerequisite: Adept Focus

Static

Effect: You gain the Mindlock Capability.

Traveler

Prerequisite: Adept Focus

Static

Effect: Once per Average Journey or Twice per Long Journey, you may perform any of Downtime Action during a Time Phase you otherwise wouldn't be able to. You must have resources on hand where it would make sense to be able to do this. Any associated Skill Checks has a Bane applied to it.

Example: Reading a book while traveling. Socializing with your Pokemon while traveling. Setting up a quick fire to Craft some food.

Warm Reader

Prerequisite: Novice Intuition

Static

Effect: When performing Charm Skill Checks involving interacting with a person or Pokemon, you may instead use your Intuition. You may perform Research Downtime Actions to study a specific person or Pokemon species, with the CR depending on the difficulty of learning about them. When they are fully studied, you may also replace Guile, Command or Intimidate Checks with your Intuition when interacting with them.

Wall Runner

Prerequisite: Novice Acrobatics

Static

Effect: You gain the Climber Capability.

Weaponsmith

Prerequisite: Novice Athletics or Focus

Static

Effect: You may craft Simple Weapons. At Expert Rank of your qualifying Skill, you may craft Fine Weapons and Braced Shields. At Virtuoso Rank you may craft Legendary Weapons and Heavy Shields.

Wild Companion

Prerequisite: Novice Nature Edu

Static

Effect: When performing a Social Check to affect disposition with a feral or wild Pokemon, you may instead use Nature Edu instead of the requested Skill. This does not affect any Pokemon who has had frequent contact with humans or is domesticated.

Wild Instincts

Prerequisite: Novice Nature Edu

Static

Effect: When interacting with Wild Pokemon or trying to Perceive something in non-Urban Terrain, you may replace Intuition and Perception checks with the Nature Edu Skill.

General Features

When you Level-Up, instead of Class Features you may instead gain a **General Feature**. These are generic effects that could apply to any Character with a high enough skill rank, regardless of their classes.

Alluring Combat

Prerequisite: Provocateur or a [Class] Feature with Provocateur as a possible Prerequisite
Static

Effect: Choose two Attacks from the Novice Attack List below to learn. When you have Expert Charm or Guile, choose two Attacks from the Novice or Expert Attack List below to learn.

Novice Attack List: Captivate, Charm, Confide, Fake Tears, Flatter

Expert Attack List: Attract, Baby-Doll Eyes, Lovely Kiss, Sweet Kiss, Tearful Look

Assistive Combat

Prerequisite: Novice Charm or Command
Static

Effect: You learn the Attacks Helping Hand and Coaching. When you reach Master Charm or Command, you learn Assist and Moral Support.

Basic Combat

Prerequisite: Novice Athletics or Combat
Static

Effect: Choose two Attacks from the Novice Attack List below to learn. When you have Expert Athletics or Combat, choose two Attacks from the Novice or Expert Attack List below to learn.

Novice Attack List: Double Hit, Chip Away, Focus Energy, Headbutt

Expert Attack List: Body Slam, Take Down, Mega Punch, Mega Kick

Battle Commander

Prerequisite: Expert Command, Novice Focus
Static

Effect: All instances of "Your Pokemon" in the Trigger line for Basic Orders are replaced with "An Ally".

Blur

Prerequisite: Expert Acrobatics or Stealth
Scene x2 - Reaction + Movement Action

Effect: You gain +3 Uncapped Evasion until the start of your next Turn.

Bonus: You gain +3 Evasion.

Brutal Attacker

Prerequisite: Adept Athletics, Combat or Intimidate
Static

Effect: When performing a Melee Attack, before the Attack's declaration as a Free Action, you may have a penalty to Accuracy equal to your Tier Level. If you do, the Attack gains a bonus to Damage Rolls equal to your Tier Value. This cannot be applied to Attacks with the Sureshot Keyword and it cannot be applied if you are Immune to having your Accuracy reduced.

Criminal Combat

Prerequisite: Rogue or a [Class] Feature with Rogue as a possible Prerequisite
Static

Effect: Choose two Attacks from the Novice Attack List below to learn. When you have Expert Combat or Stealth, choose two Attacks from the Novice or Expert Attack List below to learn.

Novice Attack List: Blindside, Feint Attack, Gash, Hone Claws, Sucker Punch, Thief

Expert Attack List: Ambush, Beat Up, Cackle, Lash Out, Night Slash, Punishment

Defensive Combat

Prerequisite: Defender or a [Class] Feature with Defender as a possible Prerequisite
Static

Effect: Choose two Attacks from the Novice Attack List below to learn. When you have Expert Athletics, Combat or Focus, choose two Attacks from the Novice or Expert Attack List below to learn

Novice Attack List: Block, Harden, Quick Guard, Taunt, Withdraw

Expert Attack List: Body Press, Iron Defense, Protect, Wide Guard

Durable Protector

Prerequisite: Adept Athletics or Combat
Static

Effect: Whenever you use the Intercept Maneuver, it isn't increased by an additional damage step.

Fleet Footed

Prerequisite: Adept Acrobatics
Static

Effect: You ignore penalties to Movement from Slow Terrain.

Focused Commander

Prerequisite: Adept Command or Poke Edu
Static

Effect: Your Active Pokemon may use Actions from your set of Trainer Actions if desired. A specific Pokemon cannot use the same Action Type more than once per Round this way. .

Example: Your Active Charmeleon cannot use two Standard Actions, one from the set of Pokemon Actions and one from its Trainer's Actions. However if the Trainer has an Active Charmeleon and Pidgeotto, the Charmeleon may use one Standard Action and the Pidgeotto can use the Trainer's Standard Action..

Jack of all Trades

Prerequisite: None
Static

Effect: Choose two Skills that are Novice Rank or Lower to increase to the next Rank. This Feature may be taken multiple times.

Imposing Combat

Prerequisite: Provocateur or a Class Feature with Provocateur as a possible Prerequisite
Static

Effect: Choose two Attacks from the Novice Attack List below to learn. When you have Expert Command or Intimidate, choose two Attacks from the Novice or Expert Attack List below to learn.

Novice Attack List: Leer, Mean Look, Roar, Swagger, Taunt

Expert Attack List: Glare, Imposing Stare, Noble Roar, Parting Shot, Torment

Martial Combat

Prerequisite: Fighter or a Class Feature with Fighter as a possible Prerequisite
Static

Effect: Choose two Attacks from the Novice Attack List below to learn. When you have Expert Athletics or Combat, choose two Attacks from the Novice or Expert Attack List below to learn.

Novice Attack List: Bulk Up, Concentration, Double Kick, Low Sweep, Mach Punch, Meditate, Power-Up Punch

Expert Attack List: Body Press, Brick Break, Counter, Drain Punch, Jump Kick, Sky Uppercut

Master Martialist

Prerequisite: Martial Combat, Master Athletics or Combat
Static

Effect: Choose two Attacks from the list below to Learn

Attack List: Adrenaline Boost, Close Combat, Dynamic Punch, High Jump Kick, Superpower

Meditative Spirit

Prerequisite: Adept Focus or Occult Education
Static

Effect: At the end of each day, perform an Occult Edu or Focus Check, then gain SP equal to half the number of Successes (Rounded Up).

Nimble Combat

Prerequisite: Strider or a Class Feature with Strider as a possible Prerequisite
Static

Effect: Choose two Attacks from the Novice Attack List below to learn. When you have Expert Acrobatics or Combat, choose two Attacks from the Novice or Expert Attack List below to learn.

Novice Attack List: Aerial Ace, Acrobatics, Agility, Quick Attack, Quick Strike, Splash

Expert Attack List: Double Team, Extreme Speed, Mach Speed, Me First

Psionic Combat

Prerequisite: Occult Researcher or Mystic or a Class Feature with either as a possible Prerequisite
Static

Effect: Choose two Attacks from the Novice Attack List below to learn. When you have Expert Focus or Occult Edu, choose two Attacks from the Novice or Expert Attack List below to learn.

Novice Attack List: Calm Mind, Cosmic Power, Light Screen, Reflect, Safeguard

Expert Attack List: Barrier, Imprison, Heal Pulse, Hypnosis, Kinesis, Mirror Coat

Quick Switch

Prerequisite: Adept Acrobatics or Guile
Static

Effect: Whenever any Standard Action is resolved, you may use your Reaction to Full Switch a Pokemon.

Resilient Body

Prerequisite: Adept Athletics

Static

Effect: You have a bonus to Save Checks equal to your Tier Level while you're affected by a Physical Affliction. You may perform the Respite Maneuver as a Standard Action instead of a Full Action.

Resilient Mind

Prerequisite: Adept Focus

Static

Effect: You have a bonus to Save Checks equal to your Tier Level while you're affected by a Mental Affliction. As a Swift Action, you may double this bonus for your next Save Check this Turn, but can only cure a Mental Affliction if the Save Check succeeds.

Sharpshooter

Prerequisite: Expert Focus or Perception

Static

Effect: You ignore Accuracy Penalties as a result of Rough or Cover Terrain.

Signature Attack

Prerequisite: You're at least Trainer Level 5

Static

Effect: Choose an Attack on your Attack List. The Attack's Frequency is improved by one step (EOT to At-Will, Scene to Scene x2, Scene x2 to Scene x3). If the chosen Attack is granted through a Weapon or Item, it only has this improvement while you're Equipping it.

Stat Specialist

Prerequisite: Expert Combat

Static

Effect: Choose a Stat other than HP. That Stat cannot be reduced below +0 CS by non-Boss Pokemon. The Default CS for that Stat is set to +1 CS.

Supportive Spirit

Prerequisite: Novice Command

Static

Effect: Any Ally within 3m can use your SP, at your approval. If you're outside of combat, this applies to any Ally within the Scene, provided you explain how you're helping.

Tactical Mind

Prerequisite: Expert Combat or Intuition

Static

Effect: Whenever you perform a Manipulate or Tactic Maneuver, its AC becomes 2 if it would otherwise be higher.

Vocational Versatility

Prerequisite: None

Static

Effect: You gain two Talents for which you Qualify. This Feature may be taken multiple times.

Weapon Specialist

Prerequisite: Expert Combat

Static

Effect: You may use Damaging Attacks you learned as if they were Weapon Attacks. When used this way, their Range is replaced with the Weapon's Range. Any other Range Keywords may still apply. If they're Damaging, their Category is also shifted based on your Weapon.

Trainer Classes

The last aspect of a Trainer that can affect how they function in battle are known as **Trainer Classes**. While Classes may be a familiar term to you, unlike other TTRPGs, PTU and by extension, PTE are more “**Classless**” in their scope.

This means that while there are classes, you’re not limited to one or two and multiclassing is the norm, and in fact, expected of all Trainer Builds. The limit of 4 Classes is primarily for the sake of filling out the number of Features you would get when leveling up and it being the optimal amount of classes needed without sacrificing your Trainer’s identity. Functionally speaking, Classes are simply groups of

Features that share a common identity and help a Trainer fulfill an archetype mechanically. If you take the Defender Class, Features residing under it are all defensive options that help your Character tank better.

As iterated earlier, the only limitation is that **you can only have up to 4 Classes in total**. This means that you cannot have more than 4 Features with the [Class] Feature Tag. (And considering you can’t qualify for the rest of the class without the [Class] Feature, you can’t take the class)

Types of Classes

Base vs Advanced Classes

When categorizing Classes, we have [Base] Classes and [Advanced] Classes. If you take a Base Class, you’ll tend to get generic Features that anyone who wants to pursue that playstyle will benefit from.

If you take the Defender Class, it’ll give a lot of generic tanking and defensive support, however its Advanced Classes are all more specific in what they grant based off of the direction of “Tank” they want to be.

Choosing Classes

When deciding on the Classes you’ll take, there are a few essential questions you should ask, listed below:

1. Is there going to be Trainer Combat?

If the GM says there is going to be “Direct” Trainer combat, you need to be able to do something to contribute to Combat. The easiest way to do so is take a Class or Features that provide Damage.

PTE however is built in a way that no matter what classes you decide on, you’ll always have something of value in combat, but just keep your actions in mind when deciding on Classes.

More importantly, if there is no Trainer Combat, you likely should only take Classes in “Pokemon Classes”

2. What is your primary Trainer Identity?

Whatever their identity is, you should usually take the Base Class and one of its Advanced Classes so it’ll be an easy decision. Are you a Trainer who’s a Water Type Gym Leader? Take Type Specialist, Water Specialist and maybe a few Pokemon Classes here and there.

In Base PTE, There are three categories of Classes that we have created when designing them originally, all of which are listed below

Pokemon Classes

These Classes are all known as **Pokemon Support**. Features granted in these classes are designed to power up your Pokemon, rather than you or they’re centered around interacting with Pokemon.

The Base Classes in this category are **Commander, Training Specialist, Ranger and Type Specialist**.

Education Classes

These Classes are a mixed bag of Features that benefit your Pokemon and benefit yourself, however it leans more towards Combat Classes. However, these are mainly separated by them all needing Education Skills to qualify for them.

The Base Classes in this category are **General Researcher, Medicine Researcher, Nature Researcher, Occult Researcher, Pokemon Researcher, Performer and Tech Researcher**.

Combat Classes

These Classes are all known as **Trainer Support or Direct Combat Classes**. Conversely to Pokemon Classes, these Classes power up you instead of your Pokemon. These Classes tend to provide you with Attacks and ways to contribute to battle. You’ll find that these Classes tend to align more with traditional RPG Roles!

The Base Classes in this category are **Fighter, Defender, Marksman, Strider, Rogue and Provocateur**.

COMMANDER

Commanders are Trainers that are your professional "Trainers". They know how to command not only pokemon, but their allies. They're masters on the battlefield and know how to be in sync with their allies in order to secure victory at the end of the day.

Commander

[Base] [Class]

Prerequisite: Novice Command

At-Will - Free Action

Trigger: You use an Order

Effect: One Target of the Triggering Order gains a Rallied Coat. A Rallied Coat can be expended as a Swift Action before the user rolls a d20 to add a d4 Modifier to it. At Tier 3, this upgrades to a d6. Commander can only be used once per Round.

Bonus: You gain the Battle Commander General Feature, ignoring Prerequisites.

Battlefield Tactics

Prerequisite: Commander, Novice Command
Static

Effect: Once per Round, you may use a Basic Order as a Free Action instead of a Reaction. When you have 4 Commander Features, at any point you can spend a Swift Action or Movement Action to gain an additional Reaction.

Tactical Correction

Prerequisite: Commander, Expert Command
Scene x3 - Reaction

Trigger: An Ally fails a Skill Check, Save Check or Accuracy Check in Combat

Effect: The Triggering Check is rerolled. A Roll can only trigger this Feature once.

Shotcaller

Prerequisite: Commander, Adept Command
Static

Effect: You gain the Focused Commander Feature. Allied Pokemon may also use Actions from your set of Trainer Actions if desired, with the same restrictions as well as your SP.

Rallying Command

[Order]

Prerequisite: Commander, Master Command
Scene x2 - Swift Action

Target: An Ally

Effect: Choose an Effect below to apply to the Target:

- » The Target gains 3 Ticks of Temporary Hit Points
- » The Target is cured of a Mental Affliction
- » The Target gains their choice of an extra Swift or Movement Action on their next Turn. This cannot be selected if there are multiple Targets.

HUNTER

Some Commanders have a deep partnership over their Pokemon and have trained them to become in sync with them. As a result, the Hunter can pursue targets alongside their Pokemon without even needing to issue commands and their Pokemon will know how to act.

Hunter

[Advanced] [Class]

Prerequisite 1: Commander [or]

Prerequisite 2: Adept Command or Nature Edu

Static

Effect: You and your Pokemon learn the Pack Hunt Ability. You gain the Battle Commander General Feature, ignoring Prerequisites.

Hunter's Mark

[Order]

Prerequisite: Hunter, Novice Command or Nature Edu
At-Will - Swift Action

Target: An Enemy within 10m

Effect: The Target becomes Marked with a Prey mark. When you or your Pokemon move and end their movement in a space that is adjacent to an Enemy with your Prey Mark, that movement does not provoke Attacks of Opportunity. When Enemies with your Prey Mark move, if you or your Pokemon were Adjacent to them, they may Slide into a space that is adjacent to that Enemy as a Free Action. Enemies with your Prey Mark cannot perform the Disengage Maneuver while they're Adjacent to you or your Pokemon.

Trained Reflexes

Prerequisite: Hunter, Adept Command or Nature Edu
Static

Effect: When you or your Pokemon perform an Attack of Opportunity, the Target cannot apply Evasion against it. The first time your Pokemon would use a Reaction each Round, it is treated as a Free Action instead.

Don't Look Away

Prerequisite: Hunter, 2 Hunter Features, Expert Command or Nature Edu

Scene x2 - Free Action

Trigger: You or your Pokemon would use an Attack of Opportunity

Effect: Choose one of the following effects to apply:

» Instead of a Basic Attack, they may use a Natural At-Will Damaging Attack against the Triggering Enemy

» Instead of using a Basic Attack, they use a Trip Maneuver against the Triggering Enemy, ignoring Range and interrupting Movement should it succeed.

» After the Attack of Opportunity resolves, the Triggering Enemy becomes Slowed until the end of their next Turn.

Master of the Hunt

Prerequisite: Hunter, 3 Hunter Features, Master Command or Nature Edu

Static

Effect: While an Enemy is affected by a Prey Mark, they are Vulnerable against Attacks or Maneuvers derived from your Pokemon while they're adjacent to the Marked Enemy. While an Enemy with a Prey Mark has a Status Affliction, they cannot Trigger Attacks or Abilities in response to Attacks from your Pokemon.

MOTIVATOR

For some Trainers, the path to victory isn't paved with strategy or harsh training, no. For some, all that they need is the power of encouragement and friendship in order to win! Trainers that are Motivators perform orders in a way to inspire their allies.

Motivator

[Advanced] [Class] [Order]

Prerequisite 1: Commander or Performer **[or]**

Prerequisite 2: Adept Charm and Novice Command

At-Will - Swift Action

Target: Up to three Allied Combatants

Effect: The Targets gain a Motivated Coat.

Bonus: You gain the Battle Commander General Feature, ignoring Prerequisites

Mechanic - Motivated Coat

A Motivated Coat can be expended as a Free Action in any of the following ways:

- » When the Motivated Ally is hit by an Attack they gain Damage Reduction against it equal to your Tier Value
- » When the Motivated Ally makes a Save Check, they have a bonus to it equal to Double your Tier Level.
- » When the Motivated Ally hits an Attack, after the Attack's resolution, they gain +1 CS in a Stat of their Choice.

Artist: Unknown

Motivational Cheering

Prerequisite: Motivator, Novice Charm or Command Static

Effect: Whenever you use a Basic Order, one Target of it gains a Motivated Coat.

Inspirational Support

Prerequisite: Motivator, 2 Motivator Features, Expert Charm or Command
At-Will - Extended Action

Trigger: You use a Downtime Action to Train your Pokemon

Target: Your Trained Pokemon

Effect: The Target gains the Helper or Friend Guard Ability. Your Pokemon can only have one Ability gained this way at a time.

Bonus: You learn the Helper Ability. When you use an Order on a Single Ally, it also Triggers the Helper Ability.

Go, Fight, Win!

[Order]

Prerequisite: Motivator, Adept Charm or Command
Scene x2 - Swift Action

Target: An Ally within 5m

Effect: Choose an Effect below to apply to the Target:

- » The next time the Target would expend a Motivated Coat, they instead don't.
- » The Target is cured of a Status Affliction.
- » The Target's next Attack gains the Sureshot Keyword.

Don't Give Up!

Prerequisite: Motivator, 3 Motivator Features, Master Charm or Command
Scene - Reaction

Trigger: An Ally with a Motivated Coat would Faint

Effect: The Triggering Ally expends the Motivated Coat and is set to 1 Hit Point instead of Fainting. They also gain a number of Ticks of Temporary Hit Points equal to the number of Allies within 2m of them.

Artist: Yasu Suupatenin

STRATEGIST

Trainers who are strategists go beyond the level of commanders, preferring field wide tactics and excelling and commanding multiple allies at the same time. Not only that, they can adapt to enemy tactics with Protocols or Tactics of their own to counter any strategy they have.

Strategist

[Advanced] [Class]

Prerequisite 1: Commander [or]

Prerequisite 2: Adept Command and Novice Focus

At-Will - Free Action

Trigger: A Round Starts

Effect: Create a 3x3 Observation Zone on the Field that lasts until the end of the Round. You may use Basic Orders on Allies within this Zone as a Free Action. A Combatant can only be affected by an Order used this way once per Round.

Bonus: You gain the Battle Commander General Feature, ignoring Prerequisites

Initiate Protocol

[Order]

Prerequisite: Strategist, Novice Command or Focus
At-Will - Swift Action

Target: An Ally within 5m

Effect: Choose a Protocol listed below to apply to the Target. Modifiers and Bonuses gained this way last until the end of the Round. A Target can only be affected by one Protocol at a time and it does not stack. X is equal to your Tier Value and Y is equal to your Tier Level.

» **Protocol - Offense:** The Target has a +X Bonus to Damage Rolls and +Y to Critical Hit Ranges.

» **Protocol - Defense:** The Target gains +X Damage Reduction and a Tick of Temporary Hit Points

» **Protocol - Inspire:** The Target has a +Y Modifier to Accuracy Rolls and Effect Ranges.

» **Protocol - Recover:** The Target has +Y Bonus to Save Checks and restores a Tick of Hit Points

Personal Instruction

Prerequisite: Strategist, 2 Strategist Features, Expert Command or Focus
Static

Effect: You learn the Attacks Coaching and Instruct. When using either of these Attacks, their Range is also treated as 6, 1 Target.

Adaptive Tactics

Prerequisite: Strategist, Adept Command or Focus
At-Will - Standard Action

Condition: You're not affected by a Mental Status Affliction and there is an Observation Zone on the field

Effect: Choose one of the following to Apply to all Allied Combatants within your Observation Zone (And yourself if you're in the Zone):

» **Bolstering Tactics:** All affected Combatants have all negative Combat Stages reset to their Default Value and cannot lose Combat Stages until the end of the next Round.

» **Breaching Tactics:** All affected Combatants have their next Damaging Attack that hits be unable to be resisted and cannot Trigger Defensive Abilities.

» **Fortified Tactics:** All affected Combatants resist the next Damaging Attack that hits them.

» **Recovery Tactics:** All affected Combatants pass their next Save Check and cannot gain Status Afflictions until the end of the next Round.

Field Commander

Prerequisite: Strategist, 3 Strategist Features, Master Command or Focus
Scene x2 - Reaction

Trigger: An Ally or Enemy within your Observation Zone is Attacked

Effect: If the Target of the Triggering Attack is an Ally, the Attack misses all Allies within your Observation Zone. If the Target of the Triggering Attack is an Enemy, the Attack gains the Sureshot Keyword. Once per Scene, if the Triggering Attacker is also within your Observation Zone, this Feature's Frequency is not expended.

TRAINING SPECIALIST

How can one be a Pokemon Trainer without specializing in training? Training Specialist is the quintessential and default Class for Trainers who want their Pokemon to be better. This is achieved by improved stats and signature techniques that can be applied to them.

Training Specialist

[Base] [Class]

Prerequisite: Novice Command or Poke Edu

Bind X - Extended Action

Target: Your Pokemon

Effect: Choose a Stat to become the Target's Trained Stat. The Target's Trained Stat has their Default CS Value set to +1. A Target may only be bound by the Training Specialist Feature once at a time. If you chose HP, they instead start the Scene with 2 Ticks of Temporary Hit Points. You may have this Feature bound a number of times equal to half the higher of your Command or Poke Edu Rank.

Experienced Trainer

Prerequisite: Training Specialist, Novice Command or Poke Edu
Static

Effect: You gain the Pokemon Trainer Talent (Or another Talent for which you qualify if you already have it). At the start of each Combat Scene, Pokemon in your Party gain 1 Temporary SP, which is removed at the end of the Scene if not used. (This doesn't count towards the limit of 3)

Combat Memory

Prerequisite: Training Specialist, 2 Training Specialist Features, Expert Command or Poke Edu
Scene x2 - Swift Action

Target: Your Pokemon within 5m

Effect: Choose an Attack on the Target's Battle Attack List and Known Attack List. Until the end of the Scene, the Target adds the Attack from the known list onto their Battle Attack List, then removes the chosen Attack that was on their Battle Attack List.

Signature Technique

Prerequisite: Training Specialist, Adept Command or Poke Edu
At-Will - Extended Action

Trigger: You use a Training Downtime Action

Effect: Choose one of your Pokemon being trained and apply a Signature Technique to one of their Attacks or remove a previous Signature Technique and apply a new one. A Pokemon can only have one Attack affected by a Signature Technique at a time. In order for a Signature Technique to be chosen, it must meet any listed Prerequisites of the Technique.

Ace Trainer

Prerequisite: Training Specialist, 3 Training Specialist Features, Master Command or Poke Edu
Bind 1 - Extended Action

Target: Your Pokemon

Effect: While this Feature is Bound, the Target has different limitations applied to them regarding Signature Techniques. They may have an Attack benefit from two Signature Techniques or they may have two different Attacks benefit from a Signature Technique.

Bonus: The Trained Stats for your Pokemon have their Default CS Value increased by +1 or they start the scene with 3 Ticks of Temporary Hit Points if it is HP.

Signature Techniques
Are on the next Page

SIGNATURE TECHNIQUES

Prerequisite

The Attack is Line, Burst or Blast Range

Efficient Blast

Effect: If the Attack has the Full Action Keyword, it is removed and the Attack is instead a Standard Action.

Scattershot

Effect: The Attack's Range is changed to 4, 2 Targets

Vicious Storm

Effect: The Attack gains the Smite Keyword. If the Attack is Status Category, instead, it's AoE is increased by +1.

Prerequisite

The Attack is 1-Target

Guarding Strike

Effect: Whenever this Attack hits an Enemy, the next Attack that Enemy uses against the user becomes resisted by an additional Damage Step. Each Enemy can only be affected by this Effect once per Scene.

Reliable Attack

Effect: If the Target of this Attack is Flanked, or if the user uses a Swift Action, this Attack cannot miss. If the Attack would have multiple Accuracy Rolls such as Five Strike, this only applies to the first one.

Unbalancing Blow

Effect: The Target of this Attack cannot apply Evasion against the next Attack that Targets them.

Prerequisite

The Attack is Physical or Special Category

Alternative Energy

Effect: The Category of the Attack is switched from Physical to Special or Vice Versa.

Bloodied Rush

Effect: This Attack gains the Priority Keyword. While you're under 50% Hit Points, when used through the Priority Keyword, Targets cannot apply Physical or Special Evasion.

Elemental Infusion

Effect: As a Swift Action, the User may use this Attack as if its Type were one of the User's Types instead.

Prerequisite

The Attack is Status Category

Adaptive Utility

Effect: If the Attack is used with the Versatile Keyword, on a 15+, its Effect is replaced with its normal Effect. This Effect Range ignores Effect Range Modifiers and if the Attack has no Accuracy Roll, perform a Luck Roll instead.

Double Curse

Effect: The user may Target an additional Enemy with this Attack. This Effect is ignored if the Attack is used through the Versatile Keyword. This Technique can only be applied to a 1-Target Status Attack that doesn't have the Self Keyword and does not allow you to use Non-Status Attacks through it such as "Copycat".

Supreme Concentration

Effect: When performing an Accuracy Roll for this Attack, roll twice and take the better result. This can only be applied to Attacks with an AC.

DUELIST

Trainers that are a Duelist are experts in your standard, typical Pokemon battles. They excel in singling down enemies and taking them down, then moving onto the next Enemy until none stand in their way. As time progresses in a battle, Momentum makes them even stronger.

Duelist

[Advanced] [Class]

Prerequisite 1: Training Specialist **[or]**

Prerequisite 2: Adept Focus or Intuition

At-Will - Free Action

Target: An Enemy within 10m

Effect: The Target becomes Marked with a Tagged Mark. The Tagged Mark has no effect other than applying to the Momentum Counter Mechanic.

Mechanic - Momentum Counters

Your Pokemon can have a Maximum of 6 Momentum Counters. At the end of each Round, your Pokemon gain +1 Momentum Counter. Whenever your Pokemon hit a Tagged Enemy with an Attack or Maneuver, they gain +1 Momentum. Whenever your Pokemon miss a Tagged Enemy, they lose -1 Momentum. Whenever your Pokemon Faint, are Recalled, or end Combat, all Momentum Counters are lost. Your Pokemon have a Bonus to Accuracy and Evasion against Tagged Enemies equal to their Momentum Counters.

Duelist's Gambit

[Order]

Prerequisite: Duelist, Novice Focus or Intuition
At-Will - Swift Action

Target: Your Pokemon with Momentum Counters

Effect: Apply one of the following Effects to the Target, then expend the listed amount of Momentum Counters on the Target. This cannot be used if the Target does not have enough Momentum Counters.

» **Expend 1 Momentum:** The Target's next Attack against your Tagged Enemy has a bonus to Effect Range or Critical Hit Range of your choice equal to their Momentum Counters, instead of Accuracy.

» **Expend 2 Momentum:** The Target is cured of a Mental Affliction.

» **Expend 3 Momentum:** The Target has an Attack fully restored of its Frequency. They can only be affected by this Effect once per Scene.

Calculated Strategy

Prerequisite: Duelist, 2 Duelist Features, Expert Focus or Intuition

Scene x2 - Free Action

Trigger: See Effect

Effect: You may have a Pokemon expend 2 Momentum Counters to perform either Effect when this Feature is Triggered. If your Pokemon would take Super Effective Damage from a Tagged Enemy, it is treated as Neutral Effectiveness instead. If your Pokemon would deal Resisted Damage to a Tagged Enemy, it is increased by an additional damage step.

Tides of Combat

Prerequisite: Duelist, Adept Focus or Intuition

At-Will - Free Action

Trigger: Your Pokemon inflict a Status Affliction, avoid an Attack from a Tagged Enemy, or land a Critical Hit against a Tagged Enemy

Effect: After the resolution of the Triggering Attack, all of your Active Pokemon gain +1 Momentum. Tides of Combat can only be activated up to twice per Round.

Clash of Fate

Prerequisite: Duelist, 3 Duelist Features, Master Focus or Intuition

Scene - Reaction

Trigger: A Tagged Enemy would hit your Pokemon with an Attack

Effect: The Targeted Pokemon may immediately use a Damaging Attack as a Standard Action as if it had Priority before the Triggering Attack resolves, but it can only Target the Triggering Enemy. You may additionally declare Momentum Counters, which are expended after this Attack's Resolution, to improve this Attack. If at least 2 would be expended, the Attack has the Sureshot Keyword. If it is at least 5, it automatically is a Critical Hit. If the Triggering Enemy would faint from this Attack, the Triggering Attack does not resolve.

MASTERMIND

Mastermind Trainers are always one step ahead of their enemies. As such, their Pokemon are trained specifically to exploit their enemies' weaknesses, directed by the mastermind themselves. These Trainers specialize in status moves compared to direct damaging attacks.

Mastermind

[Advanced] [Class]

Prerequisite 1: Training Specialist [or]

Prerequisite 2: Adept Guile or Intuition

Static

Effect: Your Pokemon may use the Help Maneuver or use Attacks through the Versatile Keyword even if they used a Damaging Attack this Round. Additionally, they are not restricted from using Damaging Attacks if they did perform one of these Actions during their Turn.

Exploited Strike

Prerequisite: Mastermind, Novice Guile or Intuition
Scene x2 - Free Action

Trigger: Your Pokemon use an Attack against an Enemy(s) with a Status Affliction

Effect: If the Triggering Attack's Damage Base is 7 or lower or has an EOT or At-Will Frequency, the Triggering Attack has the Sureshot Keyword. Otherwise, all applicable Targets cannot apply Stat Evasion against the Triggering Attack.

Calculated Plan

Prerequisite: Mastermind, Expert Guile or Intuition
At-Will - Reaction

Trigger: You or your Pokemon roll a Natural 16+ on a Status Attack

Effect: Choose one of the following Effects to apply:

- » You gain a Wit Counter
- » The Triggering Combatant gains two Ticks of Temporary Hit Points
- » The Triggering Attack's Frequency is not expended.

Cunning Wit

Prerequisite: Mastermind, Adept Guile or Intuition
Static

Effect: At the Start of each Round, you gain a Wit Counter (Max 3). You or your Pokemon may expend a Wit Counter at any time to gain an additional Swift Action or Reaction, which is removed at the end of the Round. A Combatant can only expend a Wit Counter once per Round.

Devious Training

Prerequisite: Mastermind, 3 Mastermind Features, Master Guile or Intuition
Scene - Free Action

Trigger: Your Pokemon hit an Attack against an Enemy that was used as a Swift Action through the Versatile Keyword

Effect: The Triggering Attack instead uses the normal Effect of the Attack as if it were used by a Standard Action.

STAT ACE

While some Trainers specialize by a favored type of Pokemon, some Trainers just like Pokemon that excel in a certain stat. This could be bulky defensive walls like Golem and Bastiodon or it could be swift Pokemon like Yanmega and Weavile.

Stat Ace

[Advanced] [Class]

Prerequisite 1: Training Specialist **[or]**

Prerequisite 2: Adept Poke Edu or an Adept Stat Skill Static

Effect: Choose Attack, Defense, Special Attack, Special Defense, Speed or HP to become your linked Stat. Your Pokemon gain the Ability listed in parenthesis next to your Linked Stat.

» **Attack** (Huge Power), **Defense** (Stoicism), **Special Attack** (Sorcery), **Special Defense** (Mysticism), **Speed** (Alacrity), **HP** (Abominable)

Note- Each Skill has an associated Stat which also may be used to qualify for Stat Ace Features. Attack (Athletics or Combat), Defense (Athletics or Focus), Special Attack (Occult Edu or Focus), Special Defense (Occult Edu or Focus), Speed (Acrobatics or Combat), HP (Athletics or Focus)

Stat Link

Prerequisite: Stat Ace, Novice Poke Edu or a Novice Stat Skill Static

Effect: Your Pokemon have their Default CS for their linked Stat set to +1 CS. If the Stat is HP, they instead start the Scene with 2 Ticks of Temporary hit Points. At the end of your Pokemon's Turn, if their linked Stat is below their Default CS value, it is set to their Default CS value. If the Stat is HP, at the end of their Turn if their Hit Points are below 50%, they restore a Tick of Hit Points.

Stat Specialty

Prerequisite: Stat Ace, 3 Stat Ace Features, Master Poke Edu or a Master Stat Skill Scene x2 - Swift Action

Effect: This Feature's Effect is dependent on your Linked Stat.

» **HP:** You may Target your Pokemon within 5m to have them restore 3 Ticks of Hit Points or have them be cured of a Status Affliction. A Pokemon can only be Targeted this way once per Scene.

» **Attack:** You may Target your Pokemon within 5m to have their next Physical Attack treat its range as "Melee, Pass" or "Melee, All Adjacent Enemies". This Attack ignores any positive Combat Stages in Defense.

» **Defense:** You may Trigger this Feature when your Pokemon are hit by a Special Attack to instead apply Defense towards Damage Calculations.

» **Special Attack:** You may Target your Pokemon within 5m to have their next Special Attack treat its range as "4, 2 Targets" or "8, Ranged Blast 3". This Attack ignores any positive Combat Stages in Special Defense.

» **Special Defense:** You may Trigger this Feature when your Pokemon are hit by a Physical Attack to instead apply Special Defense towards Damage Calculations.

» **Speed:** You may Trigger this Feature when your Pokemon make an Attack to have them ignore Speed Evasion. If it's Damaging, Targets must use their Speed Stat instead of the relevant Defense Stat to determine the Damage Calculations.

Stat Training

Prerequisite: Stat Ace, Adept Poke Edu or an Adept Stat Skill

At-Will - Extended Action

Trigger: You perform a Training Downtime Action on your Pokemon

Effect: Your Trained Pokemon learns an Attack listed below based on your chosen Stat even if they cannot normally learn it or may swap one of their Attacks learned this way with another listed Attack under the chosen Stat. This Attack does not take an Attack Slot on their Battle Attack List.

» **HP:** Recover, Refresh

» **Attack:** Swords Dance, Feint

» **Defense:** Iron Defense, Reflect

» **Special Attack:** Nasty Plot, Hidden Power

» **Special Defense:** Amnesia, Light Screen

» **Speed:** Agility, After You

Stat Mastery

Prerequisite: Stat Ace, 2 Stat Ace Features, Expert Poke Edu or an Expert Stat Skill Static

Effect: Your Pokemon gain an Ability based on your chosen Stat:

» **HP:** Vigor

» **Attack:** Defiant

» **Defense:** Stamina

» **Special Attack:** Mental Force

» **Special Defense:** Magic Guard

» **Speed:** Accelerate

TASKMASTER

Trainers don't always treat their Pokemon as friends. Taskmasters are trainers that tend to be more brutal when training their Pokemon. Whether its treating them as tools rather than companions or treating them with tough love, Taskmasters tend to be outliers as Trainers.

Taskmaster

[Advanced] [Class]

Prerequisite 1: Commander or Training Specialist **[or]**

Prerequisite 2: Adept Command or Intimidate

Static

Effect: Your Pokemon gain the listed benefits if their Current Hit Points are lower than the following HP Thresholds.

75% - +2 Modifier to Accuracy Rolls and Save Checks

50% - +5 to Damage Rolls and +5 Damage Reduction. These become +10 if you have 5 Taskmaster Features.

25% - +2 Modifier to Critical Hit Ranges and Effect Ranges.

0% - All the previous values are doubled.

Strict Command

Prerequisite: Taskmaster, Novice Command or Intimidate

At-Will - Swift Action

Trigger: You use a Basic Order on your Pokemon

Effect: Double all numerical values on the triggering Order when applying them to targeted Pokemon.

All affected Targets have their next Damaging Attack they hit gain the Recoil 1/3 Keyword and they cannot apply Stat Evasion against the next Attack that Targets them.

Endure the Pain

Prerequisite: Taskmaster, 2 Taskmaster Features, Expert Command or Intimidate

At-Will - Free Action

Trigger: You Target your Pokemon with an Order

Effect: The Targeted Pokemon gains a Tick of Temporary Hit Points.

Bonus: Your Pokemon Faint when they reach -25% of their Maximum Hit Points instead of when they reach 0 Hit Points.

Pain Tolerance

Prerequisite: Taskmaster, Adept Command or Intimidate

Scene x2 - Free Action

Trigger: Your Pokemon are hit by a Damaging Attack

Effect: They resist the Attack by an additional Damage Step. A Pokemon can only benefit from this Feature once per Scene unless they have negative Hit Points.

Hardened Expectations

Prerequisite: Taskmaster, 3 Taskmaster Features, Master Command or Intimidate

Scene x2 - Special

Trigger: Your Pokemon would be hit by an Attack, would fail a Save Check or hit an Attack

Effect: When Triggered, your Pokemon must use a Reaction to activate this Feature. If the Trigger was being hit by an Attack, the Attack instead misses. If the Trigger was failing a Save Check, the result is treated as a 20 instead. If the Trigger was hitting an Attack, the Attack becomes a Critical Hit

RANGER

Some Trainers have a special connection with Pokemon, either being able to control them or command them, usually resulting in the path of a Ranger. Rangers have great authority in Pokemon settings and use Ranger Stylers as their tool to command Pokemon around them!

Ranger

[Base] [Class]

Prerequisite: Two Novice Ranger Skills

Static

Effect: You gain the Ranger Styler Item and it gains the [Trinket] Keyword and is always treated as Equipped. If it were to occupy an Equipment Slot despite having the [Trinket] Keyword, you may instead use its Effects as a Standard or Swift Action, but an Enemy can only be affected by your Styler once per Round. Additionally, when using a Styler, you may use any Ranger Skill for the Opposed Skill Check.

Note- Your Ranger Skills are- Charm, Command, Intuition, Nature Edu or Poke Edu

Ranger Training

[Ranked 3]

Rank 1 Prerequisite: Ranger, Two Novice Ranger Skills

Rank 2 Prerequisite: Ranger, an Expert Ranger Skill

Rank 3 Prerequisite: Ranger, a Master Ranger Skill

Static

Effect: For each Rank, choose two Ranger Techniques on the next page to learn.

Poke Assist

Prerequisite: Ranger, an Adept Ranger Skill

At-Will - Standard Action

Condition: You have a Companion Pokemon

Effect: Choose a Type that one of your Companions have, then refer to the Poke Assist Chart to the right. You may choose one of the Attacks listed under the associated Type and then immediately use it as a Free Action as if it were on your Attack List (Following Frequency).

Poke Assist Chart

Type	Attack Options
Bug	Sticky Web or String Shot
Dark	Gash or Torment
Dragon	Draconic Roar or Primal Energy
Electric	Eerie Impulse or Thunder Wave
Fairy	Fae Blessing or Sweet Kiss
Fighting	Coaching or Concentration
Fire	Fire Wall or Will-o-Wisp
Flying	Defog or Whirlwind
Ghost	Confuse Ray or Curse
Grass	Aromatherapy or Leech Seed
Ground	Dust Cloud or Sand Pit
Ice	Haze or Mist
Normal	Helping Hand or Safeguard
Poison	Poison Powder or Toxic Spikes
Psychic	Light Screen or Reflect
Rock	Crystalize or Stealth Rock
Steel	Iron Spikes or Metal Sound
Water	Aqua Infusion or Life Dew

Mechanic - Companion

Pokemon that are your Companion are not considered to be captured but follow you and take orders as if they were captured. These Pokemon do not need Stat Sheets and cannot participate in Combat unless otherwise stated. Companion Pokemon are not counted towards your limit of 3 Pokemon in a Party but you may only have one Companion at a time unless otherwise stated. When a Pokemon loses the Companion Title they cannot assist the Party in any way and are treated as a Wild Pokemon that cannot become a Companion again, and may either choose to follow the Players to be later captured with a Pokeball or return to their home and leave the Scene. A Pokemon loses the Companion Title whenever they do any of the following:

- » They use a Capability
- » They succeed a Skill Check that assists the Party
- » They are dismissed by the Trainer
- » A Downtime Phase would occur

Ranger Techniques

Call of the Wild

Scene x2 - Swift Action

Effect: You gain a random Pokemon from the nearby area as a Companion Pokemon. If you expend another usage of this Technique, then you may choose the Pokemon instead from a list of available Pokemon the GM gives you (Or the GM Approves one you ask for). This Technique can also be used once per Day as a Downtime Action if you pass Poke Edu or Nature Edu Skill Check with the CR determined by how difficult it would be for this Pokemon to be nearby

Companion Link

Static

Effect: You gain a Boon to all Skill Checks against Pokemon who share a Type with a Companion Pokemon you currently have.

Field Expertise

Static

Effect: Choose two Ranger Skills to increase to the next Skill Rank, if you meet the prerequisites for that Rank. This Technique may be taken up to two times.

Pack Leader

Static

Effect: You may have a number of Companion Pokemon equal to half your highest Ranger Skill Rank instead of being limited to one. You gain the Pack Mon Capability

Partner Pokemon

Bind 1 - Extended Action

Target: A Pokemon you own

Effect: While this Technique is bound, the Target is considered a "Companion" for anything that would reference it but cannot lose the Companion Title. This Pokemon cannot be targeted with the Officer Feature.

Ranger Leadership

Static

Effect: You may use Basic Orders as if the Trigger was "An Allied Pokemon" instead of "Your Pokemon".

Wild Commander

Prerequisite: Ranger, Poke Assist

Scene x2 - Free Action

Effect: You may use Poke Assist as if it were a Swift Action this Turn, however you must select an Attack with the Swift Action or Versatile Keyword and it is used with that Effect. After the Attack resolves, unless you have the Officer Feature, the chosen Companion Pokemon loses the Companion Title.

Wilderness Bond

Static

Effect: You gain the Wild Companion Talent. If you already have the Talent or gain it in the Future, you may use any Ranger Skill instead of just Nature Edu for it. You also gain the Empath Capability but it only applies to Pokemon.

OFFICER

Rangers that are more authoritative tend to follow the path of an Officer, the law enforcement in most settings. These Characters handle combat against villains and aggressive Pokemon and are able to command their Companions to assist in battle!

Officer

[Advanced] [Class]

Prerequisite 1: Ranger [or]

Prerequisite 2: Adept Combat or Command
Bind X - Standard or Extended Action

Target: Your Companion

Effect: While Bound, the Companion becomes a Battle Companion. If they were to gain Initiative, you may expend any number of unused Trainer Actions for them to use, otherwise they cannot use Actions. When you Faint, this Feature is unbound and they lose their Companion Title. X is equal to your Tier Level.

Bonus: You gain a Ranger Styler.

Coordinated Assistance

Prerequisite: Officer, Novice Combat or Command
At-Will - Reaction

Trigger: An Ally fails a Save Check or Accuracy Check

Target: Your Pokemon or Battle Companion that is Adjacent to the Triggering Ally

Effect: The Triggering Ally may reroll with a modifier equal to your Tier Level.

You're Under Arrest!

[Order]

Prerequisite: Officer, Expert Combat or Command
At-Will - Swift Action

Target: Your Pokemon or Battle Companion within 3m and an Enemy within 3m of them

Effect: The Targeted Pokemon performs an AC 4 Status Attack against the Targeted Enemy. If it hits, apply one of the following Effects to the Targeted Enemy:

- » They become Grappled and you have Dominance
- » They become Slowed
- » They become Trapped

Combat Assist

Prerequisite: Officer, Adept Combat or Command
Scene x2 - Swift Action

Target: Your Battle Companion within 5m

Effect: Choose an Attack from the Poke Assist Chart (See: Ranger) that matches one of the Target's Types. They use that Attack immediately as a Free Action.

Companion Commander

Prerequisite: 4 Officer Features, Master Combat or Command
Scene x2 - Full Action

Target: Two Battle Companions within 2m of you

Effect: Both Targets may use an At-Will or EoT Damaging Attack as a Free Action. If both Attacks only Target the same single Enemy, they both have the Sureshot Keyword

Bonus: Once per Round, when using Officer Features, you may Target an Allied Pokemon as if they were your Battle Companion.

Mechanic - Battle Companion

Battle Companions are treated as normal Companions but may be used in Battle and are treated as an Active Pokemon, despite not having a Stat Sheet. Battle Companions can only use your Trainer Actions that you expend through the Officer Feature for Actions, unlike normal Pokemon. Other than that, when they gain Initiative they may move up to 3m without expending a Movement Action. A Battle Companion is considered to have access to all Attacks on their Level-Up List at or below your Max Pokemon Level. If a Battle Companion would use a Damaging Attack, its Offensive Stat is equal to Triple your Tier Value. When your Battle Companion is targeted by a Damaging Attack, roll a Luck Check with a TN 5. If they fail, they Faint and lose their Companion Title. Every time a Battle Companion succeeds this Check, increase the TN by +5.

OPERATOR

Officers and other Rangers need to get their gadgets and equipment from somewhere, and that calls for Operators! Operators excel in utilization of the Ranger Styler and can adjust it in various ways to always have an advantage in their combat missions!

Operator

[Advanced] [Class]

Prerequisite 1: Ranger or Tech Researcher **[or]**

Prerequisite 2: Adept Tech Edu

Static

Effect: While your Ranger Styler occupies an Equipment Slot, it is treated as a Simple, Short Ranged Martial Weapon. Its qualifying skill is Technology Education. At Tier 2, it improves to Fine Quality and at Tier 3, it improves to Legendary Quality. You may choose the granted Attacks but it does not get Keywords.

Bonus: You gain a Ranger Styler.

○ Activate Module!

Prerequisite: Operator, Novice Tech Edu

At-Will - Swift or Movement Action

Condition: You have a Ranger Styler equipped

Effect: Apply a Styler Mod on the next page to your Ranger Styler. Your Styler can only benefit from one Styler Mod at a time and Mods are removed at the end of the Scene.

Zone Control

Prerequisite: Operator, Expert Tech Edu
Scene x2 - Free Action

Effect: Choose an Effect to Apply:

» The next time you use a Ranger Styler's Effect, if you used it as a Swift Action, you may target enemies in a 2x2 Zone instead of one within 5m. If you used it as a Standard Action, you may instead target enemies in a 3x3 Zone.

» The next Weapon Attack you use through your Ranger Styler has its Area of Effect increased by +1 or is treated as Ranged Blast 2.

GM Note

Throughout the Campaign as rewards, allow your Ranger to learn new Styler Mods and ways to utilize their gadgets and styler! Depending on your setting, different tech could be useful so allow your Players to get creative. In a Shadow Campaign you could possibly have a Styler Gadget to determine if something is a Shadow.

○ Styler Gadgetry

Prerequisite: Operator, Adept Tech Edu

At-Will - Extended Action

Effect: Styler Gadgetry can only be activated by using a Downtime Action. Choose a Gadget below to apply to your Ranger Styler. A Styler can only benefit from one Gadget at a time unless you have 5 Operator or Ranger Features, then you can benefit from two instead. You can unlock new Gadgets to apply to your Ranger Styler as a Downtime Innovate Action at your GM's discretion.

» **Aura Scanner** - While equipped, you gain the Aura Reader Capability. Instead of you seeing Aura however, you must wave the Styler while adjacent to the target and it will expose their Aura for everyone to see.

» **Electro-Link** - While Equipped, you have a Boon to all Skill Checks involved with identifying and manipulating technology. At your GM's discretion, this Gadget may allow the holder to perform different technical actions like hacking a machine they've analyzed or interfering with it in some way such as disabling its functions.

» **Holo Projector** - While equipped, you gain the Illusionist Capability. However, any Illusions created this way are holographic in nature and are obvious for most creatures to discern.

» **Ranger Beacon** - When installed, choose a group of willing Allies who also have Ranger Stylers. While equipped, you may share any of the following to this group via your Styler, regardless of distance. Data Transfer, Verbal Communication, Video Information, Health Status of Creatures.

Advanced Module

Prerequisite: Activate Module, Master Tech Edu
Scene - Free Action

Condition: You have a Ranger Styler equipped

Effect: Apply a Styler Mod to your Ranger Styler. Your Styler can only benefit from one Styler Mod at a time.

Bonus: Your Styler Mods have their Effects improved based on having this Feature.

Styler Mods

Aggression Nullifier

Effect: Whenever you succeed a Skill Check for the Pacify action on your Ranger Styler, their Damaging Attacks next Turn are treated as Resisted instead of resisted by an additional damage step and ignore Type Effectiveness. If you have the Advanced Module Feature, their Attack and Special Attack are also lowered by -2 CS, or -1 CS if used as a Swift Action

Capture Device

Effect: Whenever you succeed a Skill check for the Restrain action on your Ranger Styler, the Target also becomes Slowed. If you have the Advanced Module Feature, the Slowed Affliction cannot be cured until the end of their next turn.

Energy Amplifier

Effect: While this Mod is active you gain the Helping Hand and Coaching Attack. If you have the Advanced Module Feature, you also gain the Moral Support and Heal Bell Attack.

Field Disruptor

Effect: Your Styler gains an additional Effect it can apply.

» **Disrupt** - Choose a Maneuver, Attack you've seen the Target use, or an Ability you've seen the Target use. They cannot use it during their next Turn. If you have the Advanced Module Feature, it instead becomes Disabled.

Guard Shatterer

Effect: Whenever you succeed a Skill Check for the Guard Break action on your Ranger Styler, its Effects apply to the next two Attacks instead of the next Attack. If you have the Advanced Module Feature, their Defense and Special Defense are also lowered by -2 CS, or -1 CS if used as a Swift Action.

Magnetic Pulser

Effect: Weapon Attacks used through your Ranger Styler may be treated as Electric Type instead. If you have the Advanced Module Feature, they also have a 16+ Effect Range to cause all Targets hit to become Paralyzed.

RIDER

Sometimes Rangers specialize in riding Pokemon or act alongside their partners. Riders specialize in acting in unison with their Pokemon, defending one another, retaliating for one another and battling as a synchronized unit, even during dire situations.

Rider

[Advanced] [Class]

Prerequisite 1: Ranger or Training Specialist **[or]**

Prerequisite 2: Adept Acrobatics or Athletics

Static

Effect: Your Pokemon are all treated as having the Mountable Capability. When Mounting a Pokemon, it may be performed as a Free Action instead of a Swift Action. While you are Mounted, you and your Mount each use the highest of each other's Evasion when either are Targeted by an Attack.

Note- A Mounted Pokemon does not need to be physically ridden to benefit from Rider Features.

Cavalier's Reprisal

Prerequisite: Rider, Novice Acrobatics or Athletics
Static

Effect: Whenever you're hit by an Adjacent Attack, the Pokemon you're mounting may Trigger their Attack of Opportunity against the Attacker. Whenever the Pokemon you're mounting is hit by an Adjacent Attack, you may Trigger an Attack of Opportunity against the Attacker. These occur after the Triggering Attack resolves. If you're both a Target, only one may Trigger an Attack of Opportunity this way.

Strafing Maneuver

Prerequisite: Rider, 2 Rider Features, Expert Acrobatics or Athletics
Scene - Special

Trigger: You and your Mount would be hit with a Blast, Burst or Line Attack

Effect: This Feature requires a Reaction to be used by either you or your Mounted Pokemon. You both Slide any number of spaces, with the maximum amount being half the Movement Value of your Mounted Pokemon. The Triggering Attack then misses you both.

GM Note - A Mounted Pokemon does not need to be physically ridden to benefit from Rider Features.

It could simply be moving close in unison, however the typical intent is for Pokemon like Arcanine to be ridden. Alternatively you could create custom shaped saddles similar to how the Machop ride mechanic works in alola. Smaller Pokemon like Pichu can also ride on the Trainer's shoulder or run alongside them in the same occupying space to functionally have the same effects as being ridden.

Ride as One

Prerequisite: Rider, Adept Acrobatics or Athletics

Scene - Free Action

Trigger: You or your Mounted Pokemon Intercept an Attack directed at one or the other

Effect: The Interceptor resists the Attack by an additional damage step.

Bonus: You and your Mounted Pokemon may Intercept for one another as a Movement Action if desired. When Intercepting for each other, the Attack isn't increased by one damage step

Synchronized Strike

Prerequisite: Rider, 3 Rider Features, Master Acrobatics or Athletics

At-Will - Full Action

Effect: The Pokemon you're mounting may use a Damaging Attack as a Free Action, however it must target an Enemy they haven't Targeted this Round yet. They cannot Attack those Targets for the rest of the Round.

Bonus: You and your Mounted Pokemon may expend SP from each other's SP Pool, as if it were their own.

Rider Examples

1. A Rider has his ace Pokemon as a Charizard and mounts it in battle to fly around and command him from the sky.
2. A Rider who is also a skirmisher battles alongside his Excavaler side by side, slicing their targets with precision.
3. A Rider carries a Smoliv in their backpack and protects it as they fight.

SIGNER

Some Rangers are able to form deep connections with Legendaries and Pokemon of grand power. These Trainers may draw on their connections and form sigils which draw upon the power of these Guardians and can assist them or act on behalf of the Guardian.

Signer

[Advanced] [Class]

Prerequisite 1: Ranger or Occult Researcher **[or]**

Prerequisite 2: Adept Occult Edu or Poke Edu

Bind X - Extended Action

Target: A Pokemon with significant power that you have at least a Trusted Bond with

Effect: The Target becomes your Guardian for the duration they are bound by this Feature.

Bonus: You may communicate with your Guardian(s) as if you had the Telepath and Empath Capability, regardless of your current distance from them. X is equal to your Tier Level.

Guardian Sign

Prerequisite: Signer, Novice Occult Edu or Poke Edu
At-Will - Standard Action

Effect: Choose a Guardian Sign from the list on the next page and apply its effects.

Battle Emblem

Prerequisite: Guardian Sign, Expert Occult Edu or Poke Edu

At-Will - Swift Action

Effect: Choose a Guardian Sign from the list on the next page and apply its effects. Each time you use this Feature after the first time during an Encounter, you must expend 1 additional SP to do so. (First usage is 0 Points, next is 1, next is 2, etc...)

Bonus: You may use the Signer Feature as a Swift Action twice per Day, choosing a new Target to become your Guardian.

GM Note - A Pokemon with significant power could be a Legendary Pokemon or a Pokemon with mythological importance to your setting such as an elder Venusaur that rules a forest. It is recommended that when your Player takes Signer, they have at least 1 Pokemon they have a bond with from their Backstory. They are meant to gain more as they journey which can expand what they can do and who they choose to draw power from at a given time.

Guardian Aspect

Prerequisite: Signer, Adept Occult Edu or Poke Edu
Static

Effect: At any time, you can expend 1 SP to use a Guardian Aspect from the list on the next page and apply its effects. If used during combat it is considered a Free Action. Whenever you perform a Downtime Action involving one of your Guardians, you gain SP equal to half the number of Successes (Rounded Down)

Example (Gaining Spirit Points) - A Player has a Guardian Darkrai and at night, he spends a Downtime Action to perform relaxation. He meditates in his room and communicates to Darkrai through telepathy and updates them on their journey thus far. He regains 2 SP as a result.

Divine Intervention

Prerequisite: Guardian Sign, Master Occult Edu or Poke Edu
Scene x2 - Reaction

Trigger: You or an Ally fall below 50% of their Maximum Hit Points

Effect: Choose a Guardian Sign from the list on the next page and apply its effects to the triggering combatant. They also have a +2 bonus to Accuracy Checks and Save Checks until the end of their next Turn.

Guardian Signs

Sigil of Elements

Effect: Choose an Attack that you or an Ally within 5m knows and a Type that one of your Guardians is. The Attack is treated as that Type until the end of the Scene.

Sigil of Empowerment

Effect: Choose you or an Ally within 5m and one of your Guardians. The chosen combatant gains +2 CS in any Stat, or +1 CS in your Guardian's highest base stat if used as a Swift Action.

Sigil of Imbuement

Effect: Choose you or an Ally within 5m and one of your Guardians. The chosen combatant gains one Attack the Guardian can learn until the end of the Scene, provided the combatant could legally learn it through Tutor Rules.

Sigil of Protection

Effect: Choose you or an Ally within 5m. The chosen Combatant gains 2 Ticks of Temporary Hit points. If used as a Standard Action, they also resist all attacks by an additional damage step until the start of your next Turn.

Sigil of Restoration

Effect: Choose you or an Ally within 5m. If used as a Standard Action, the chosen combatant restores 5 Ticks of Hit Points or is cured of a Status Affliction. Otherwise, they restore 2 Ticks of Hit Points and have a +2 bonus to their next Save Check. A Combatant can only benefit from the Standard Action effect once per Scene.

GM Note

Whenever a Player develops their relationship with one of their Guardians, you should encourage new Signs or Aspects to be discovered depending on the fluff of the Guardian, as these are meant to be generic and usable across an assortment of entities! This should be given as rewards for invested time or success. An example could be that a Player with a Guardian Ho-Oh can use a special Sign once per Scene known as the Sigil of Revival, which allows them to revive a Combatant and set them to 2 Ticks of Hit Points if used as a Standard Action. Another example could be a Sigil of Nightmares, allowing a Player to cause a Drowsy Enemy to become Cursed.

Guardian Aspects

Sigil of Authority

Effect: Whenever you fail a Skill Check involving a Pokemon whose Type matches one of your Guardians, you may use this Aspect to reroll it. This Aspect may only be performed once per Skill Check.

Sigil of Connection

Effect: This Aspect may be used to have one of your Guardians assist you in some way that they are currently able. You must be within their domain of influence for this to work or what you ask of them must be within their power profile. Depending on the scope of how they help, you may need to expend more than one Spirit Points. This cannot be used during Combat.

Example (Forest Elder) - A Player has a Guardian of an Elder Venusaur. While running away from a group of Team Rocket, they use Sigil Connection to have Venusaur summon ivy that tangles their pursuers. A Player has a Guardian Xerneas. When encountering a Poisoned Audino in the wild, they call upon Xerneas to cure them, however it costs 2 Spirit Points.

Sigil of Insight

Effect: Whenever you perform a Skill Check that one of your Guardians is Proficient or Mastered Rank in, you may use this Aspect to gain a Boon for it.

Sigil of Symbiosis

Effect: When this Aspect is used, choose one of your Guardians. For up to 10 minutes, either you or the chosen Guardian may spiritually enter the willing other's body, as if they shared a consciousness. While in this state, they experience all senses of the body they entered. If either participant takes damage for this duration, the connection is severed.

Example (Forest Elder) - A Player has a Guardian of an Elder Venusaur. While traveling, the Player is telepathically made aware that someone is attacking the forest, they set up a Sigil of Symbiosis and the Player connects with Venusaur, seeing a group of Team Rocket attacking native Pokemon and setting up fires.

Sigil of Unity

Effect: Choose a Capability that one of your Guardians has. You gain that Capability until the end of the Day.

TYPE SPECIALIST

Between Gym Leaders and Trainers who just prefer certain types, Type Specialist is the class meant for those who love a specific type. While some specialists may run only one type on their team, these classes allow you to use other Pokemon while boosting their ability to use that type.

Type Specialist

[Base] [Class]

Prerequisite: 1 Pokemon of your Chosen Type. Type Linked Skill or Poke Edu at Novice

Static

Effect: Choose a Type to become your Chosen Type. You gain the Type Aura Ability. "Your Type" for Type Aura is considered to be your chosen Type. Your Pokemon always benefit from your Type Aura Feature regardless of if they're within 2m of you.

Note: If you qualify for this Feature through Poke Edu, you may choose any Type, otherwise it must meet the Skill Requirements associated with that Type.

Type Sync

Prerequisite: Type Specialist, Type Linked Skill or Poke Edu at Novice
At-Will - Free Action

Trigger: An Allied Pokemon within 5m uses an Attack

Effect: The Triggering Attack's is treated as your chosen Type instead. This may cause the Attack to Trigger Features as if your chosen Type was its Natural Type, ignoring normal rules.

Type Exploit

Prerequisite: Type Specialist, Type Linked Skill or Poke Edu at Expert
Scene x2 - Free Action

Trigger: Your Pokemon hit with an Attack of your chosen Type

Effect: The Attack is resisted one step less, to a maximum of neutral effectiveness. If the Target(s) were to be Immune to the Triggering Attack, it instead becomes neutral effectiveness.

Type Linked Skills

Bug- Command or Nature Edu | **Dark-** Guile or Stealth
Dragon- Command or Intimidate | **Electric-** Focus or Tech Edu
Fairy- Charm or Guile | **Fighting- Athletics** or Combat
Fire- Focus or Intuition | **Flying-** Acrobatics or Perception
Ghost- Intimidate or Occult Edu | **Grass-** Gen Edu or Nature Edu
Ground- Intuition or Perception | **Ice-** Athletics or Nature Edu
Normal- Charm or Intuition | **Poison-** Intimidate or Stealth
Psychic- Focus or Occult Edu | **Rock-** Combat or Nature Edu
Steel- Focus or Tech Edu | **Water-** Athletics or Intuition

Type Expertise

Prerequisite: Type Specialist, Type Linked Skill or Poke Edu at Adept
Scene - Free Action

Trigger: You or an Ally within 5m are hit with a Damaging Attack that matches your chosen Type.

Effect: You and all Allies targeted by the Triggering Attack resist it by an additional damage step.

Bonus: You treat your chosen Type as resisted whenever you're Attacked by a Damaging Attack that matches it.

Type Embodiment

Prerequisite: Type Specialist, 3 Type Specialist Features, Type Linked Skill or Poke Edu at Master
Bind 3 - Extended Action

Target: Your Pokemon

Effect: While Bound, the Target's Type is adjusted in order to include your chosen Type. Adjusting this way can either replace a Type for your chosen Type, or add the Type if they only have one Type. If a Type is replaced, all of the Target's Attacks that are the replaced Type instead become your chosen Type (For example, Thunderbolt becoming Fire Type). Once this Feature is bound, it cannot be unbound outside of GM discretion.

Note- Your GM may allow Pokemon Targeted this way to become Type Shifts and if so, they may have additional alterations by their discretion. This may include added Attacks to their Tutor List, changed Abilities or changed Attack Effects. This Feature has the Bind Frequency instead of a "3 Times Usage" frequency in case they no longer want to use a Pokemon and want to essentially "Retrain". This is not intended for the Trainer to bind and unbind their team whenever they want and keep separate sheets for when they're bound.

BUG SPECIALIST

Bug Specialists excel in training Pokemon that are insectoids in nature. Compared to normal Trainers, Bug Specialists specialize in unlocking the adaptive nature of Bug Types, being able to command temporarily evolutionary forms depending on what they need in combat.

Bug Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Bug as your chosen Type) **[or]**

Prerequisite 2: Command, Nature Edu or Poke Edu at Adept
Bind 3 - Extended Action

Target: Your Pokemon with a Bug Type Attack

Effect: Choose an Adaptation Technique to apply to the Targeted Pokemon which they benefit from while this Feature is Bound. Your Pokemon can only have one Adaptation at a time.

» Adaptation Techniques are on the next Page

Reactive Adaptation

Prerequisite: Bug Specialist, Command, Nature Edu or Poke Edu at Novice
Scene x2 - Reaction

Trigger: Any Combatant would perform a Roll

Target: Your Pokemon bound by the Bug Specialist Feature

Effect: Before the Trigger resolves, the Target switches an Adaptation Technique they're currently affected by with a different Technique. This change reverts at the end of the Scene

Transitory Improvement

Prerequisite: Bug Specialist, Command, Nature Edu or Poke Edu at Expert
At-Will - Free Action

Trigger: Your Bug Type Pokemon start their Turn

Effect: The Triggering Pokemon gains a +2 Modifier to one of the following Combat Values until the end of the Round.

» Accuracy, Effect Range, Critical Hit, Evasion, Save Checks

Advanced Evolution

Prerequisite: Bug Specialist, Command, Nature Edu or Poke Edu at Adept
Scene x2 - Free Action

Trigger: Your Pokemon begins their Turn

Effect: During this Turn, your Pokemon's Bug Type Damaging Attacks can have their Range altered to any of the following until the end of the Turn.

» **If Melee:** It can become Pass, Burst 1 or Close Blast 2

» **If Ranged 1-Target:** It can become Line 4 or Ranged Blast 2

Disruptive Pest

Prerequisite: Bug Specialist, 3 Bug Specialist Features, Command, Nature Edu or Poke Edu at Master
Scene x2 - Free Action

Trigger: Your Pokemon hit a Bug Type Attack

Effect: After the Attack's resolution, choose an Effect to apply to all Targets of the Triggering Attack. An Enemy can only be affected by Disruptive Pest once per Scene.

» They lose -2 CS in all Stats they have positive CS in.

» They fail their next Save Check.

» They become Dazed and suffer -3 to their next Accuracy Roll.

Adaptation Technique List

Chitin Shield

Effect: The user has an Uncapped bonus to Evasion equal to your Tier Level against Status Attacks. If the user is Targeted by an Attack, the Attack has a penalty to Effect Ranges and Critical Hit Ranges equal to your Tier Level.

Exoskeleton

Effect: The user has Damage Reduction against Physical Attacks equal to your Tier Value

Nimble Speed

Effect: The user has a bonus to their Movement Value equal to double your Tier Level and cannot provoke Attacks of Opportunity via movement.

Venomous Glands

Effect: The user's Damaging Attacks have a 16+ Effect Range to Poison all Targets hit by the Attack. This extends existing Poison Effect Ranges by +2. The user may use any Bug Type Attack as if it were Poison Type.

Piercing Power

Effect: The user's Bug Type Attacks cannot be resisted by Type Effectiveness. The user ignores Damage Reduction equal to your Tier Value.

Predator Senses

Effect: The user can sense when an Enemy is 50% HP or lower. The user's Bug Type and Melee Attacks have the Sureshot Keyword when Attacking Enemies that have less than 50% HP or have a Status Affliction.

Strength Sapper

Effect: Whenever the user hits an Attack against a single Enemy used as a Standard Action, they lose -2 CS in a Stat of your choice. On a 14+, they gain +1 CS in the chosen Stat or gain a Tick of Temporary Hit Points. On a 19+, they instead gain +2 CS or two Ticks of Temporary HP.

Swarm Commander

Effect: Allies that Attack an Enemy the user is Adjacent to have a bonus to Accuracy Rolls equal to your Tier Level. Once per Round, an Ally within 3m can use an Intercept on an Attack Targeting the user as a Free Action.

DARK SPECIALIST

Dark Specialists excel in training Pokemon that tend to be either aggressive or sly in nature, as Dark Types tend to be. Whether it's a mischievous Pokemon like Morgrem or an aggressive Pokemon like Pangoro, these specialists excel in dark type and social attacks.

Dark Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Dark as your chosen Type) **[or]**

Prerequisite 2: Guile, Poke Edu or Stealth at Adept Static

Effect: Your Pokemon have a bonus to Accuracy equal to your Tier Level if the Target is Flanked, Drowsy, Slowed, Suppressed, Tripped, Weakened or Vulnerable. If the Attack is Dark Type and they gain this bonus, they also have a bonus to Effect Ranges equal to your Tier Level.

Clever Ruse

Prerequisite: Dark Specialist, Guile, Poke Edu or Stealth at Novice
At-Will - Free Action

Trigger: Your Pokemon hit a Dark Type Attack against an Enemy

Effect: After the Triggering Attack resolves choose an Effect below choose an Effect below to apply. Clever Ruse can only be activated once per Round:

- » Targets of the Triggering Attack lose -1 CS in a Stat of your choice.
- » They may use a Manipulate Maneuver against one Target as a Free Action
- » Targets of the Triggering Attack have a Penalty to their next Save Check equal to your Tier Level.

Devious

Prerequisite: Dark Specialist, Guile, Poke Edu or Stealth at Expert
Scene - Free Action

Trigger: Your Dark Type Pokemon use an Attack with the Social Keyword

Effect: After the Triggering Attack is resolved, they immediately use a Dark Type Status Category Attack or a different Attack with the Social Keyword as a Swift Action. This Attack must have a different Target than the Triggering Attack.

Sly Scheme

Prerequisite: Dark Specialist, Guile, Poke Edu or Stealth at Adept
At-Will - Free Action

Trigger: Your Pokemon resolve a Dark Type or Status Attack

Effect: Choose an Effect below to apply to the Triggering Pokemon. Sly Scheme can only be activated once per Round and cannot be used if you used Clever Ruse for the Triggering Attack:

- » They may use the Disengage Maneuver as a Free Action
- » They gain +1 CS to a Stat of their choice
- » Their next Attack or Maneuver ignores Stat Evasion

Master Plan

Prerequisite: Dark Specialist, 3 Dark Specialist Features, Guile, Poke Edu or Stealth at Master
Scene x2 - Free Action

Trigger: Your Pokemon hit a Maneuver (With an AC) or Dark Type Status Attack against a single Enemy

Effect: After the Triggering Attack or Maneuver resolves choose an Effect below choose an Effect below to apply to the Enemy. An Enemy can only be affected by Master Plan once per Scene.

- » The Target fails their next Save Check
- » The Target has a Stat with Positive CS set to -2 CS
- » The Target has all Abilities or an Attack you've witnessed Disabled until the end of the next Round.

Artist: Yuuichi Bobobo

DRAGON SPECIALIST

Dragon Specialists excel in training Pokemon that are regal and ferocious in nature, often being just as formidable as their Pokemon. Dragon Specialists can bring out the primal power of their Dragons to be as ferocious as their type should be, effectiveness be damned.

Dragon Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Dragon as your chosen Type) [or]

Prerequisite 2: Command, Intimidate or Poke Edu at Adept Static

Effect: Your Pokemon may become Enraged as a Swift Action. Whenever your Pokemon are Enraged, they cannot become Provoked. While your Pokemon are Enraged, their Dragon Type Attacks have their Area of Effects increased by +1. If an Attack would be 1-Target, it may become Blast 2 instead of having its Area of Effect increased.

Unyielding Spirit

Prerequisite: Dragon Specialist, Command, Intimidate or Poke Edu at Novice
Scene x2 - Special

Trigger: Your Pokemon become Enraged or fall below 50% Hit Points

Effect: This Feature can be activated as a Reaction by your Pokemon when the Trigger would occur. The Triggering Pokemon has a Status Affliction they're affected by cured or remove a Coat that is affecting them. Whenever they Trigger this Feature, their next Damaging Attack gains the Smite Keyword

Bonus: While your Pokemon are below 50% Hit Points, their Dragon Type Damaging Attacks have the Smite Keyword, or Sureshot Keyword if they already have the Smite Keyword.

Empowered Tyrant

Prerequisite: Dragon Specialist, Command, Intimidate or Poke Edu at Expert
Scene x2 - Swift Action

Trigger: Your Pokemon use a Dragon Type Damaging Attack

Effect: After the Triggering Attack resolves, the Triggering Pokemon may use an Attack with the "Self" range as a Swift Action, if able. This Attack must be At-Will or EoT for its Frequency.

Bonus: Your Dragon Type Pokemon may use Status Category Attacks with the "Self" range even if they're Enraged.

Draconic Sovereignty

Prerequisite: Dragon Specialist, Command, Intimidate or Poke Edu at Adept
At-Will - Free Action

Trigger: Your Pokemon hits a Dragon Type Damaging Attack against a single Enemy that is Vulnerable, Weakened, or is suffering from a Status Affliction

Effect: The Triggering Attack ignores Type Effectiveness (Including Immunity) and is treated as Super Effective. This Attack cannot benefit from any other Feature if this Effect Applies and its Effectiveness cannot be increased beyond 1.5x

Dominus Prime

Prerequisite: Dragon Specialist, 3 Dragon Specialist Features, Command, Intimidate or Poke Edu at Master
Scene x2 - Free Action

Trigger: Your Pokemon use a Dragon Type Attack

Effect: The Triggering Attack cannot miss. If the user has at least +2 CS in Attack, the Triggering Attack is automatically a Critical Hit. If the user has at least +2 CS in Special Attack, the Triggering Attack automatically triggers its Effect Range. A Pokemon may only be affected by this Feature once per Scene

ELECTRIC SPECIALIST

Electric Specialists excel in training Pokemon that obviously use electricity and lightning in some capacity. Unlike normal Trainers, Electric Specialists have the ability to measure the electrical voltage of their Pokemon and utilize it to their advantage in combat.

Electric Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Electric as your chosen Type) [or]

Prerequisite 2: Focus, Poke Edu or Tech Edu at Adept Static

Effect: Your Pokemon's Damaging Electric Type Attacks gain a 18+ Effect Range to cause their Targets to become Paralyzed if they don't have one already. If they already have one, it is increased by +1. Whenever your Pokemon use a Damaging Attack against a Paralyzed Enemy, they cannot resist it.

Electrical Charge

Prerequisite: Electric Specialist, Focus, Poke Edu or Tech Edu at Novice Static

Effect: Your Pokemon gain Voltage counters (Max 6) whenever any of the conditions below are met. If multiple conditions are met at the same time, they stack. Your Pokemon have a bonus to Paralyze Effect Ranges equal to half the number of Voltage Counters they have (Rounded Up)

- » They miss an Electric Attack against all Targets - 2 Counters
- » They use an Electric Status Attack - 1 Counter
- » They use a Self Attack - 1 Counter
- » They gain an Affliction - 2 Counters

Electrical Overload

Prerequisite: Electrical Charge, Focus, Poke Edu or Tech Edu at Expert At-Will - Special

Effect: Your Pokemon must activate this Feature as a Swift Action when they declare the usage of an Electric Type Attack. Apply any number of the Effects below to the Triggering Attack, then continue with the Attack's resolution (Effects can be chosen multiple times). After the resolution, they must expend the Voltage Counters equal to the cost, or half (Rounded Up) if it missed.

- » **1 Counter** - Grant the Attack Smite. If it already has Smite, it has a +2 Bonus to Accuracy.
- » **2 Counters** - Increase the Area of Effect by +1 or change the Range to Blast 2.
- » **3 Counters** - Ignore Type Effectiveness and treat the Attack as if it were Super Effective or Neutral Effectiveness if they were to be Immune.

System Shock

Prerequisite: Electric Specialist, Focus, Poke Edu or Tech Edu at Adept Scene x2 - Free Action

Trigger: Your Pokemon cause an Enemy to become Paralyzed or would Paralyze an Enemy that is already Paralyzed.

Effect: Choose one of the Effects to apply to the affected Enemy:

- » The Target becomes Suppressed.
- » The Target cannot use a Movement Action or Reaction for the rest of the Round.
- » The Target's Abilities are disabled while they're Paralyzed.

Chain Lightning

Prerequisite: Electric Specialist, 3 Electric Specialist Features, Focus, Poke Edu or Tech Edu at Master Scene x2 - Free Action

Trigger: Your Pokemon hit with a 1-Target Electric Attack

Effect: Before Damage Calculation, choose another Enemy within 3m of the Target. They also become a Target of the Triggering Attack and perform another Accuracy Roll against them. This Accuracy Roll has a penalty equal to the number of meters they are away from the original Target. If this Attack hits, you may repeat this effect but based on the position of the 2nd Target. The 3rd Target cannot be the original Target.

FAIRY SPECIALIST

Fairy Specialists excel in training Pokemon that have a mystical or even a chaotic aura. Through this Class, these Trainers can harness the power of Fairy Lights, created by their Pokemon in order to redirect their energy to help their allies or lead to magical ruin!

Fairy Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Fairy as your chosen Type) **[or]**

Prerequisite 2: Charm, Guile or Poke Edu at Adept

At-Will - Free Action

Trigger: Your Pokemon use a Fairy Type Attack or your Fairy Type Pokemon use a Status Category Attack

Effect: A Fairy Light is summoned in an Adjacent, unoccupied space. If the Triggering Attack's Accuracy Roll was a Natural 15+ and/or if it was a Status Attack used as a Standard Action, one more Fairy Light is Summoned. If the Triggering Attack didn't have an Accuracy Check, you may perform a Luck Roll instead.

Bonus: Fairy Lights may be expended to grant the Target a Tick of Temporary Hit Points which may stack on existing Temp HP.

Mechanic - Fairy Light
Fairy Lights float in the space they occupy, have the Glow Capability, have 1 Hit Point and are Immune to Physical Damage. On your Turn, you may have each Fairy Light Slide up to 4m as a Free Action. If they were to enter the space of an occupied Combatant, you may apply an Effect from the Fairy Specialist Class that a Fairy Light is able to do when expended, then the Fairy Light disappears. Fairy Lights are expended at the start and end of a Scene.

Mystic Blessing

Prerequisite: Fairy Specialist, Charm, Guile or Poke Edu at Novice

At-Will - Free Action

Trigger: Your Fairy Type Pokemon target an Ally with an Ability or Status Attack or Maneuver

Effect: Choose Accuracy, Save Checks or Effect Ranges for the Target(s) to gain a bonus equal to your Tier Level until the end of their next Turn. This Feature can only Target a Combatant once per Round.

Bonus: Fairy Lights may be expended to restore a Tick of Hit Points to the Target, or two Ticks if they're below 50% HP.

Phantasmal Folklore

Prerequisite: Fairy Specialist, Charm, Guile or Poke Edu at Expert

Static

Effect: Each of your Pokemon gain an Ability based on the type of Fairy you perceive them as or have trained them as. You may change this choice as an Extended Action when Training the Pokemon during Downtime.

» **Caretaker** (Blessed Touch), **Cursed** (Cursed Body), **Guardian** (Gentle Vibe), **Malicious** (Pressure), **Mystical** (Starlight), **Nature Spirit** (Flower Veil), **Temptress** (Cute Charm), **Trickster** (Prankster)

GM Note - As a GM, you may allow more ability options based on how the Trainer is training their Pokemon in the ways of a Fairy Ace. Malicious could grant Cruelty instead if desired but be wary with what you allow.

Fae Trance

Prerequisite: Fairy Specialist, Charm, Guile or Poke Edu at Adept

Scene x2 - Special

Trigger: Your Pokemon hit a Fairy Type Attack or a Social Attack

Effect: Your Pokemon must use a Swift Action to activate this Feature. Choose a Target hit by the Triggering Attack to become Dazed, Entranced or Suppressed, Whenever this Target would end their Turn while having an Affliction gained this way (After Save Checks), a Fairy Light is created in a space that is adjacent to them.

Bonus: Fairy Lights may be expended to grant the Target a bonus or penalty to their next Save Check equal to your Tier Level.

Ancient Rite

Prerequisite: Fairy Specialist, 3 Fairy Specialist Features, Charm, Guile or Poke Edu at Master

Scene - Standard Action

Target: Two Fairy Lights on the Field and your Active Pokemon with a Damaging Fairy Type Attack on their Battle Attack List

Effect: Draw a Zone in the shape of a rectangle that connects both of the Targeted Fairy Lights as corners of the Zone, then the Fairy Lights are expended. The Targeted Pokemon may use a Fairy Type Damaging Attack as a Free Action with the Range being replaced with all Allies or Enemies (Of your choice) in the Zone, ignoring Frequency. Using an Attack this way does not create Fairy Lights.

FIGHTING SPECIALIST

Fighting Specialists excel in training Pokemon that prioritize brawn over brains, often preferring to punch their way to a solution. This Class's strategy is to allow your Pokemon to single out an enemy and gain bonuses as they fight in close range to them in a one v one duel.

Fighting Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Fighting as your chosen Type) **[or]**

Prerequisite 2: Athletics, Combat or Poke Edu at Adept

At-Will - Free Action

Trigger: Your Pokemon hit with a Melee or Fighting Type Damaging Attack on a single Target

Effect: The Target becomes Marked with an Adversary Mark.

Bonus: Your Pokemon's Fighting Type Damaging Attacks have a bonus to Damage Rolls equal to your Tier Value and a bonus to their Accuracy Rolls equal to your Tier Level. These bonuses only apply if the only Target is an Enemy with the Adversary Mark.

Retaliating Strike

Prerequisite: Fighting Specialist, Athletics, Combat or Poke Edu at Novice
Scene x2 - Special

Trigger: Your Pokemon are hit by an Adjacent Enemy

Effect: Your Pokemon must activate this Feature by using a Reaction when it would Trigger. After the Triggering Attack resolves, the Pokemon hit by the Attack may perform an Attack of Opportunity against the Triggering Enemy as a Free Action. If the Triggering Pokemon had their Adversary Mark, they may instead use a Damaging Fighting-Type Attack with a Frequency of At-Will instead of a Basic Attack.

Bonus: Whenever a Combatant with your Adversary Mark would Disengage out of a space that is Adjacent to your Pokemon, they trigger an Attack of Opportunity, ignoring Disengage.

Who's Next?

Prerequisite: Fighting Specialist, Athletics, Combat or Poke Edu at Expert
Scene x2 - Free Action

Trigger: An Enemy with an Adversary Mark applied by you Faints

Effect: Choose an Enemy to apply the Adversary Mark to. Your Active Pokemon gain a Tick of Temporary Hit Points and +1 CS in a Stat of their Choice.

Boastful Challenger

Prerequisite: Fighting Specialist, Athletics, Combat or Poke Edu at Adept

Scene x2 - Free Action

Trigger: Your Pokemon hit a Fighting or Melee, 1 Target Damaging Attack

Effect: The Target becomes Provoked by the Attacker until the end of their next Turn. If the Target was their Adversary, the attacker resists their next Damaging Attack by an additional step. An Enemy can only be affected by Boastful Challenger once per Scene.

Smashing Punishment

Prerequisite: Fighting Specialist, 3 Fighting Specialist Features, Athletics, Combat or Poke Edu at Master
Scene - Free Action

Trigger: Your Pokemon hit an Adjacent Enemy with a Fighting-Type Damaging Attack

Effect: The Target becomes Vulnerable until the end of the next Round. In addition apply one of the following Effects to the Target:

» Before Damage Calculations, the Target's Defense or Special Defense is set to -2 CS.

» The Target gains the Wounded Affliction.

» The Target loses one Coat that they are currently affected by and it cannot be Activated in response to this Feature's Activation.

Bonus: Your Pokemon's Attacks against their Adversary ignore their Physical Evasion.

FIRE SPECIALIST

Fire Specialists excel in training Pokemon that burn with a fiery spirit as hot as their flames. Their specialty lies in empowering the fire of their Pokemon, leaving residual embers on the field and leaving burns that are stronger than normal. It's time to turn up the heat!

Fire Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Fire as your chosen Type) **[or]**

Prerequisite 2: Focus, Intuition or Poke Edu at Adept Static

Effect: Your Pokemon's Damaging Fire Type Attacks gain a 18+ Effect Range to cause their Targets to become Burned. If they already have a Burn Effect Range, it is increased by +2. Whenever a Fire Hazard or your Pokemon Burn a Target that is already Burned, they lose a Tick of Hit Points and gain +1 Combustion Counter (Max 3). Whenever a Burned Combat with a Combustion Counter would cure the Burned Affliction, they instead remove a Combustion Counter.

Fan the Flames

Prerequisite: Fire Specialist, Focus, Intuition or Poke Edu at Novice
Scene x2 - Free Action

Trigger: Your Pokémon uses a Fire Type Attack

Effect: Instead of its usual range, the attack may be performed as if it had a range of Burst 1 if Melee, or Close Blast 2 if ranged. If the Attack is already a Burst, Blast, or Line, increase the size of the Attack's area by +1 (Burst 1 becomes Burst 2, etc). Regardless of if the Attack hits, Fire Hazards are created on each space within the Attack's Range.

Blazing Battlefield

Prerequisite: Fire Specialist, Focus, Intuition or Poke Edu at Expert
Scene - Free Action

Trigger: Your Pokémon would use a Fire Type Attack

Effect: You may ignore the Range of the Triggering Attack. Instead, choose any number of Fire Hazards within 3m of the Triggering Pokemon and create a 3x3 Zone around each chosen Fire Hazard, centered on the Hazard. The Attack's Range is all spaces within the created Zones. Each Hazard chosen this way is destroyed after Attack Resolution.

Bonus: Your Pokemon may originate any Fire Type Attack from a Fire Hazard within 5m of them, but after Attack Resolution, the Hazard is destroyed.

Severe Burns

Prerequisite: Fire Specialist, Focus, Intuition or Poke Edu at Adept Static

Effect: Enemies that are Burned by your Pokemon or Fire Hazards you create cannot restore Hit Points while Burned. In addition, whenever they would lose Hit Points from the Burned Affliction, they lose an Additional Tick per Combustion Counter they have.

Spontaneous Combustion

Prerequisite: Fire Specialist, 3 Fire Specialist Features, Focus, Intuition or Poke Edu at Master
Scene x2 – Free Action

Trigger: Your Pokemon use a Fire Type Attack against a Burned Enemy

Effect: All Burned Targets of the Triggering Attack become cured of the Burned Affliction and all Combustion Counters they had. The Triggering Attack cannot miss Targets cured this way. If the Triggering Attack was Damaging and they cured Combustion Counters, the Attack also becomes a Critical Hit automatically and they cannot use Reactions against it.

Mechanic - Fire Hazard

Any Combatant who ends their turn on or enters as space with a Fire Hazard becomes Burned. Ground and Rock Type Pokemon are immune to Fire Hazards and destroy them when shifting through them. Ground, Rock, and Water Type Attacks that Target these Spaces also destroy these Hazards. Fire Type Pokémon are Immune to this Hazard's effects.

FLYING SPECIALIST

Flying Specialists excel in training Pokemon that are as free as the wind itself. These Trainers specialize in swift Pokemon that can use the sky to their advantage, can manipulate the battlefield with their gales, and can act swiftly with speed only an avian can perform.

Flying Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Flying as your chosen Type) [or]

Prerequisite 2: Acrobatics, Perception or Poke Edu at Adept Static

Effect: Your Pokemon gain the Quick Capability. Your Flying Type Pokemon may use the Disengage Maneuver as a Swift Action as well as a Movement Action and when they do, they may move 3m instead of 1.

Skyward Bound

Prerequisite: Flying Specialist, Acrobatics, Perception or Poke Edu at Novice
At-Will - Special

Effect: Your Pokemon with the Flier Capability may activate this Feature as a Movement Action to fly up to 25m in the air and leave the field, becoming Untargetable for this duration. At the beginning of their next Turn they re-enter the Field as a Movement Action and descend down to any space within 10m of their previous location, then their next Damaging Attack this Turn gains the Smite Keyword. Each Pokemon may only activate Skyward Bound once per Scene.

Note: This Feature cannot be used if the user is in an area with a height of less than 10m. This Feature allows the user to ignore the Flier Capability, allowing them to exceed 4m in the air.

Aerial Control

Prerequisite: Flying Specialist, Acrobatics, Perception or Poke Edu at Expert
At-Will - Special

Effect: Your Flying Type Pokemon may activate this Feature as a Swift Action to perform any of the following:

- » Choose an Enemy within 5m to Slide 3m in any direction unless they pass a Tough CR (3) Acrobatics Check
- » The Weather becomes Windy or the Weather is removed, of your choice. The Weather may only become Windy this way once per Scene
- » In a Close Blast 3 or Line 6 Range, all Hazardous Terrain that was created by an Attack or Ability is destroyed and reverted to Basic Terrain.

Gale Strike

Prerequisite: Flying Specialist, Acrobatics, Perception or Poke Edu at Adept
Scene x2 - Free Action

Trigger: Your Pokemon miss a Flying Type Attack against all Targets

Effect: The Accuracy Roll is performed once again. If the Attack would result in a Critical Hit, it is instead a normal hit, but Gale Strike's Frequency is not expended.

Tornado Surge

Prerequisite: Flying Specialist, 3 Flying Specialist Features, Acrobatics, Perception or Poke Edu at Master
Scene - Free Action

Trigger: Your Pokemon would take their Turn

Effect: Choose two different options from the following list to grant the Triggering Pokemon for this Turn.

» **An Extra Standard Action:** This can only be used to use a Flying Type Attack that is At-Will, use a Flying Type Attack that is EOT, or use a Naturally Flying Type Status Attack.

» **An Extra Swift Action:** This can only be used for Abilities, Maneuvers or Flying Specialist Features.

» **An Extra Movement Action:** This must be used to Move spaces.

» **An Extra Save Check:** Taking this allows you to roll your Save Check twice, taking the higher result.

GHOST SPECIALIST

Ghost Specialists excel in training Pokemon that live on the edge of life and death and have a spectral nature. Being attuned to Ghost Types allows these Trainers to hex their enemies with curses and debuffs utilizing Curse Tokens which are gained from ghastly events in combat.

Ghost Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Ghost as your chosen Type) **[or]**

Prerequisite 2: Intimidate, Occult Edu or Poke Edu at Adept Static

Effect: Whenever your Pokemon use a Ghost Type Attack, you gain 1 Curse Token (Max 6) after Attack resolution. Your Pokemon may use a Standard Action, or a Free Action upon Fainting, to expend any amount of Curse Tokens to apply conditions to an Enemy within 5m of them listed below at their listed cost:

» **1 Curse Token:** The Target becomes Suppressed

» **2 Curse Tokens:** The Target becomes Cursed or loses -3 CS in a Stat of your Choice

» **3 Curse Tokens:** The Target has one Stat of your choice lowered to -2 CS

» **4 Curse Tokens:** The Target becomes Drowsy and cannot be cured through sources other than a Save Check.

Phase Shift

Prerequisite: Ghost Specialist, Intimidate, Occult Edu or Poke Edu at Novice
At-Will - Special

Effect: Your Ghost Type Pokemon may activate this Feature as a Movement Action to remove themselves from the Field and become Untargetable for this duration. At the beginning of their next Turn they may reappear in any space they could have moved to from their previous location, then their next Attack ignores Speed Evasion. Each Pokemon may only activate Phase Shift once per Scene.

Bonus: Your Pokemon with the Phaser Capability may instead use it as a Free Action.

Cursed Malediction

Prerequisite: Ghost Specialist, Intimidate, Occult Edu or Poke Edu at Expert
Scene x2 - Free Action

Trigger: Your Pokemon is hit by an Attack

Effect: After Damage Calculations, you may spend any of your Curse Tokens and apply its conditions to the Triggering Enemy. If the Triggering Enemy has a Status Affliction, they have a -4 Penalty to their next Save Check.

Bonus: Whenever an Enemy fails a Save Check, you gain a Curse Token. You can only gain up to two per Round this way.

Vampirism

Prerequisite: Ghost Specialist, Intimidate, Occult Edu or Poke Edu at Adept

Scene x2 – Free Action

Trigger: Your Pokémon hits an adjacent enemy with a Ghost Type Attack

Effect: Choose a Stat. After Damage Calculations (If any), the triggering enemy loses a Tick of Hit Points and a Combat Stage in that Stat. Your Pokémon gains 1 Combat Stage in the chosen Stat, and a Tick of Temporary Hit Points. If the Triggering Attack was a Critical Hit or the Weather is Foggy, this Feature's Frequency isn't expended.

Spectral Surprise

Prerequisite: Ghost Specialist, 3 Ghost Specialist Features, Intimidate, Occult Edu or Poke Edu at Master

Scene x2 - Free Action

Trigger: Your Pokemon use a Ghost Type Attack

Effect: The Triggering Attack gains the Smite Keyword. After the Triggering Attack is resolved, they may spend any of their Curse Tokens and apply its conditions to any targets of the Triggering Attack as a Free Action.

GRASS SPECIALIST

Grass Specialists excel in training Pokemon that abide in nature. These Trainers often specialize in the wide array of status attacks a Grass Pokemon can learn and the growth potential of grass Pokemon. This allows them to make their Grass Types stronger and be versatile.

Grass Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Grass as your chosen Type) [or]

Prerequisite 2: Gen Edu, Nature Edu or Poke Edu at Adept
At-Will - Extended Action

Trigger: You use a Downtime Action to Train your Pokemon

Target: Your Trained Pokemon and a Grass Type Status Attack on their Battle or Known Attack List

Effect: The Targeted Attack no longer takes an Attack Slot and is always on their Battle Attack List. A Pokemon can only have one Attack affected by this Feature at a time; if a new Attack is chosen for the Targeted Pokemon, the previous one loses this Effect.

Floral Embodiment

Prerequisite: Grass Specialist, Gen Edu, Nature Edu or Poke Edu at Novice
At-Will - Extended Action

Trigger: You use the Training Downtime Action on your Grass Type Pokemon

Effect: They gain either the Flower Power or Flower Veil Ability. A Pokemon can only have one Ability gained this way at a time.

Enduring Bloom

Prerequisite: Grass Specialist, Gen Edu, Nature Edu or Poke Edu at Expert
Scene x2 - Free Action

Trigger: Your Grass Type Pokemon is dealt Super Effective Damage

Effect: The Grass Type Pokemon gains a Tick of Temporary Hit Points and gains +1 CS in a Stat of your choice. If the Weather is Sunny, they also resist the triggering Attack by an additional damage step. A Pokemon may only be affected by this Feature once per Scene.

Photosynthesize

Prerequisite: Grass Specialist, Gen Edu, Nature Edu or Poke Edu at Adept
Scene x2 - Free Action

Trigger: Your Grass Type Pokemon end their Turn without using a Damaging Attack or in Sunny Weather

Effect: Choose an Effect to apply:

- » The user restores two Ticks of Hit Points.
- » The user gains a Tick of Temporary Hit Points.
- » The user is cured of a Status Affliction.

Cross Pollination

Prerequisite: Grass Specialist, 3 Grass Specialist Features, Gen Edu, Nature Edu or Poke Edu at Master
Scene - Free Action

Trigger: Your Pokemon hit a Damaging Grass Type Attack as a Standard Action

Effect: The Effect of the Triggering Attack is replaced with the Effect of a Naturally Grass Type Status Attack on the User's Battle Attack List.

Example - Cross Polination

Your Pokemon use Leaf Storm and hit with it. They replace following effect with the effect of Grass Whistle, which is also on their Battle Attack List.

Before (Leaf Storm)

After Damage Calculations, lower the Offensive Stat used for this Attack by -2 CS. Smite

After (Leaf Storm w/Grass Whistle Effect)

The Target becomes Drowsy or Entranced. On a Miss, they instead become Vulnerable until the end of the next Round. Spirit Surge.

GROUND SPECIALIST

Ground Specialists excel in training Pokemon that are masters of the ground beneath us, being able to manipulate the very soil that we walk on. These Trainers specialize in manipulating the field, creating spikes, creating large attacks and even tripping others as you control the land.

Ground Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Ground as your chosen Type) **[or]**

Prerequisite 2: Intuition, Perception or Poke Edu at Adept

At-Will - Free Action

Trigger: Your Pokemon use a Ground Type Attack

Effect: After the Attack's resolution, create a 3x3 Zone that includes one Target of the Triggering Attack. Spike Hazards are created in Spaces in this Zone. If the Triggering Pokemon has the Groundshaper Capability, they may use it on any number of spaces in this zone as a Free Action.

Embedded Thorns

Prerequisite: Ground Specialist, Intuition, Perception or Poke Edu at Novice
Static

Effect: When Enemies Trigger Spike Hazards that are created by you or your Pokemon they gain an Embedded Coat. Whenever an Enemy with an Embedded Coat uses a Movement Action for anything other than removing the Embedded Coat, they lose a Tick of Hit Points and cannot gain Hit Points or Temporary Hit points until the end of the next Round. The Embedded Coat may be expended as a Movement Action

Seismic Warning

Prerequisite: Ground Specialist, Intuition, Perception or Poke Edu at Expert
At-Will - Special

Effect: Your Pokemon may use a Swift Action to create a 3x3 Zone on the Field within 5m of them, then choose a Naturally Ground Type non-Field Attack on their Battle Attack List. At the end of the next Round, the Attack is used as a Free Action (Following Frequency) with its Range being all spaces within that Zone. If the Attack is Damaging, it is resisted by an additional Damage Step.

Upheaval

Prerequisite: Ground Specialist, Intuition, Perception or Poke Edu at Adept

Scene x2 - Free Action

Trigger: Your Pokemon use a Ground Type Attack or an Attack with the Groundsource Keyword

Effect: After the Accuracy Roll and before determining if it hit or not, one Target of the Triggering Attack must make an Acrobatics Check with a Standard CR (2) or else they become Tripped. If the Triggering Attacks' Natural Accuracy Roll was a 15+, the Skill Check becomes a Tough CR (3) instead. If the Triggering Pokemon is Tier 3, increase the Challenge Rating by +1.

Unraveled Earth

Prerequisite: Ground Specialist, 3 Ground Specialist Features, Intuition, Perception or Poke Edu at Master

Scene x2 - Free Action

Trigger: Your Pokemon would use a Ground Type Attack or an Attack with the Groundsource Keyword

Effect: The Triggering Attack must be used as a Full Action instead of its former Action cost in order to Trigger this Feature. The Range of the Triggering Attack is changed to Burst 3 and gains the Friendly and Smite Keyword. If any Target would be Immune to Ground Type or Groundsource Attacks, it is instead treated as Neutral Effectiveness. A Pokemon can only Trigger this Feature once per Scene.

Mechanic - Spike Hazard

Spaces with Spike Hazards are treated as Slow Terrain. Any Grounded Enemy that enters a space with a Spike Hazard loses one Tick of Hit Points and cannot gain Hit Points or Temporary Hit Points until the end of the next Round.

ICE SPECIALIST

Ice Specialists excel in training Pokemon whose cold tactics weaken those around them. The job of an ice specialist is to make their Ice Pokemon sturdier and to empower their Pokemon's Ice Attacks to cause worse effects on their enemies, including a deep chill.

Ice Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Ice as your chosen Type) **[or]**

Prerequisite 2: Athletics, Nature Edu or Poke Edu at Adept Static

Effect: Your Pokemon's Ice Type Attacks inflict the Chilled Affliction on an 18+ or increase existing Chilled Effect Ranges by +2. Whenever your Pokemon would cause a Chilled Pokemon to become Chilled again, they gain a Permafrost Coat. Whenever an Enemy with a Permafrost Coat is hit by a Damaging Attack, it automatically becomes a Critical hit, then the Coat is expended.

Glacial Body

Prerequisite: Ice Specialist, Athletics, Nature Edu or Poke Edu at Novice
Scene x2 - Free Action

Trigger: Your Ice Type Pokemon are hit by a Damaging Attack

Effect: The Ice Type Pokemon gains Damage Reduction against the Triggering Attack equal to their Tick Value. If the Weather is Snowy and the Triggering Attack is Super Effective, it is resisted by an additional damage step as well.

Arctic Zeal

Prerequisite: Ice Specialist, Athletics, Nature Edu or Poke Edu at Expert
Scene x2 - Swift Action

Trigger: Your Pokemon use with an Ice Type Attack as a Standard Action

Effect: Choose one of the Effects to apply:

- » All Targets of the Triggering Attack lose -2 CS in a Stat of your Choice (Choose for each)
- » You may use an Ice Type Blessing Attack with its Versatile Effect as a Free Action, ignoring Frequency
- » If the Weather is Snowy, gain +1 CS in a Stat of your choice

Frozen Solid

Prerequisite: Ice Specialist, Athletics, Nature Edu or Poke Edu at Adept
Scene x2 - Free Action

Trigger: Your Pokemon would apply a Permafrost Coat

Effect: Instead of having the Coat apply to them, they lose their next Standard Action and become Slowed. An enemy can only be affected this way once per Scene.

Bonus: Your Pokemon also apply a Permafrost coat when they cause an Enemy to become Chilled if they are Vulnerable or Weakened.

Deep Cold

Prerequisite: Ice Specialist, 3 Ice Specialist Features, Athletics, Nature Edu or Poke Edu at Master
Scene - Swift Action

Trigger: Your Pokemon hit with an Ice Type Damaging Attack

Effect: One Target of the Triggering Attack becomes Chilled, then choose a Stat of theirs to be set to -2 CS.

NORMAL SPECIALIST

Normal Specialists excel in training Pokemon that are, well, normal. Average. Run of the mill. There's nothing special about normal ace except its ability to make normal Pokemon less normal and excel in raw strength or prowess. Or they could bring others down to their level.

Normal Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Normal as your chosen Type) **[or]**

Prerequisite 2: Charm, Intuition or Poke Edu at Adept Static

Effect: Your Pokemon's Normal Type Attacks have a Damage Bonus equal to your Tier Value. Whenever your Pokemon use a Normal Type Attack as a Standard Action, they gain Damage Reduction equal to your Tier Value until the end of the next Round. Damage Reduction gained this way cannot stack with itself.

Plainly Precise

Prerequisite: Normal Specialist, Charm, Intuition or Poke Edu at Novice Static

Effect: Your Pokemon's Normal Type Damaging Attacks have their Accuracy Roll performed twice, taking the higher result

Simple Minded

Prerequisite: Normal Specialist, Charm, Intuition or Poke Edu at Expert Static

Effect: Your Normal Type Pokemon gain the Simple Ability.

Extra Ordinary

Prerequisite: Normal Specialist, Charm, Intuition or Poke Edu at Adept At-Will - Special

Trigger: Your Pokemon resolve a Normal Type Attack

Effect: The Triggering Pokemon must use a Swift Action to activate this Feature. The Triggering Pokemon either gains +1 CS in a Stat of their choice or a +2 Modifier to any of the following Combat Values for the rest of the Scene.

» Accuracy, Effect Range, Critical Hit, Evasion, Save Checks

Contagious Normality

Prerequisite: Normal Specialist, 3 Normal Specialist Features, Charm, Intuition or Poke Edu at Master Scene x2 - Free Action

Trigger: Your Pokemon hit an Enemy with a Normal Type Attack used as a Standard Action

Effect: Choose one of the Effects to apply to the Targets hit by the Triggering Attack. An Enemy can only be affected by Contagious Normality once per Scene:

» The Target's next Damaging Attack cannot exceed Neutral Effectiveness

» The Target's Abilities are disabled until the end of the next Round.

» The Target's Combat Stages are set to +0 until the end of the next Round. After this duration, they revert to their original value, overwriting any changes that may have occurred since this was inflicted.

POISON SPECIALIST

Poison Specialists excel in training Pokemon that weaken and subdue their enemies with their venom. These Trainers specialize in having more effective poison that has a stronger potency on their enemies and can even weaken their physical health and combat stats.

Poison Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Poison as your chosen Type) [or]

Prerequisite 2: Intimidate, Poke Edu or Stealth at Adept Static

Effect: Your Pokemon's Damaging Poison Type Attacks gain a 18+ Effect Range to cause their Targets to become Poisoned. If they already have a Poisoned Effect Range, it is increased by +2. Whenever a Hazard or your Pokemon Poison a Target that is already Poisoned, they gain +1 Venom Counter (Max 3). Whenever a Poisoned Combatant with a Venom Counter would cure the Poisoned Affliction, they instead remove a Venom Counter.

Miasma

Prerequisite: Poison Specialist, Intimidate, Poke Edu or Stealth at Novice
Scene x2 – Free Action

Trigger: Your Pokémon uses a Poison Type Attack

Effect: Gas Hazards are created in the spaces within the Range of this Attack. If the Triggering Attack had a single Target, it may instead create Gas Hazards in a Ranged Blast 3 centered around that target. If the Triggering Attack missed, this Feature does not require a usage of its Frequency to be activated. Enemies that Trigger this Hazard become Poisoned.

Debilitate

Prerequisite: Poison Specialist, Intimidate, Poke Edu or Stealth at Expert
Scene - Free Action

Trigger: Your Pokemon would Poison an Enemy, Grant them a Venom Counter or land a Critical Hit with a Poison Type Attack.

Effect: They instead become Weakened or Vulnerable (Of your choice) until the end of the next Round. If the Trigger was a Critical Hit, the Triggering Attack is no longer a Critical Hit but inflicts one of the prior listed Conditions.

Potent Venom

Prerequisite: Poison Specialist, Intimidate, Poke Edu or Stealth at Adept
At-Will - Free Action

Trigger: Your Pokemon Poison an Enemy or grant them a Venom Counter

Effect: If they became Poisoned, you may have any Stat become lowered by the effects of the Affliction, not just Special Defense. Additionally, the chosen Stat can't be raised while they're Poisoned. If they gained a Venom Counter, they lose -2 CS in a Stat of your Choice.

Bonus: Whenever Poisoned Enemies would lose Hit Points from the Poisoned Affliction, they lose an Additional Tick per Venom Counter they have.

Corrosive Blight

Prerequisite: Poison Specialist, 3 Poison Specialist Features, Intimidate, Poke Edu or Stealth at Master
Scene x3 - Free Action

Trigger: Your Pokémon hits a Poisoned Enemy with a Poison Type Attack

Effect: The Target loses a Tick of Hit Points, then loses another for every Stat they have negative CS in. A Target may only be affected by Corrosive Blight once per Scene.

Mechanic - Gas Hazard

Any Enemy who ends their Turn on or enters a space with a Gas Hazard loses one Tick of Hit Points and suffers any additional effects derived from the source. This Effect is ignored by Combatants with the Breathless Capability.

PSYCHIC SPECIALIST

Psychic Specialists excel in training Pokemon that are trained in the mystic arts and sometimes have intelligence equal to our own. Unlike other specialists, the Trainers psionically link with their Pokemon, allowing them access to the psychic capabilities their partners possess.

Psychic Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Psychic as your chosen Type) [or]

Prerequisite 2: Focus, Occult Edu or Poke Edu at Adept

Bind 2 - Extended Action

Target: A Pokemon you own and a Psychic Status Attack currently on their Battle Attack List

Effect: While this Feature is bound, you have the chosen Attack added to your Attack List.

GM Note - As a GM you may curate which Attacks they're allowed to choose through this Feature for sake of balance or table fun. Attacks like Teleport can be deemed to be unlearnable if you don't want players to access it. Additionally be wary of type shifted Attacks.

Psychic Sponge

Prerequisite: Psychic Specialist, Focus, Occult Edu or Poke Edu at Novice
Static

Effect: All of your Pokemon gain +1 Attack Slot on their Battle Attack List, however it can only be used for a Psychic Type Status Attack. Whenever your Psychic Type Pokemon see a Psychic Type Attack used by another Combatant, they may add it to their Battle Attack List for the rest of the Scene. Attacks added this way do not take an Attack Slot.

Mindbreak

Prerequisite: Psychic Specialist, Focus, Occult Edu or Poke Edu at Expert
At-Will - Free Action

Trigger: Your Pokemon use a Psychic Damaging Attack

Effect: Choose one of the following to apply. You may choose an additional effect for each Mental Affliction the Target is affected by:

- » The Triggering Attack gains a bonus to Damage Rolls equal to your Tier Value
- » The Triggering Attack gains a bonus to Effect Ranges equal to your Tier Level
- » The Triggering Attack ignores Evasion from Special Defense.

Psychic Resonance

Prerequisite: Psychic Specialist, Focus, Occult Edu or Poke Edu at Adept

Scene x2 - Free Action

Trigger: Your Pokemon hit with a Psychic Type Damaging Attack

Effect: After the Attack's resolution, roll 1d4. All Targets hit with the Triggering Attack become inflicted with the following Status Affliction. On a 1, they become Suppressed. On a 2, they become Dazed. On a 3, they become Enraged. On a 4, they become Drowsy.

Psionic Manipulation

Prerequisite: Psychic Specialist, 3 Psychic Specialist Features, Focus, Occult Edu or Poke Edu at Master

Scene x2 - Free Action

Trigger: Your Pokemon use a Psychic Typed Attack as a Standard Action

Effect: Your Pokémon may immediately use a different Psychic-Type Status Attack from its Attack List with a range of Blessing, Field, Hazard, or Self as a Swift Action. If the Triggering Attack was not a Status Attack, they cannot Trigger this Feature for the rest of the Scene.

ROCK SPECIALIST

Rock Specialists excel in training Pokemon that are born of the earth, soil and mountains. They specialize in flooding the field with rocky hazards that they can then use to either bolster their attacks, defend themselves or just have them impair the movement of their enemies.

Rock Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Rock as your chosen Type) **[or]**

Prerequisite 2: Combat, Nature Edu or Poke Edu at Adept

At-Will - Extended Action

Trigger: You use a Downtime Action to Train your Pokemon

Target: Your Trained Pokemon

Effect: The Target learns the Stealth Rock Attack, even if they normally can't learn it. If the Target is Rock Type, the Attack doesn't take an Attack Slot on their Battle Attack List. Your Pokemon may treat the Stealth Rock attack as if it were EOT Frequency instead of Scene x2.

Igneous Impact

Prerequisite: Rock Specialist, Combat, Nature Edu or Poke Edu at Novice
Scene x2 - Free Action

Trigger: Your Pokemon hit a Rock Type Damaging Attack

Effect: After the Attack's resolution, choose an Effect below to apply to one Target of the Triggering Attack:

- » The Target becomes Vulnerable against the next Attack to Target them
- » The Target is Slid up to 3m away from the user
- » The Target loses -2 CS in Defense.

Sedimentary Shield

Prerequisite: Rock Specialist, Combat, Nature Edu or Poke Edu at Expert
Scene - Free Action

Trigger: Your Rock Type Pokemon are hit by a Super Effective Damaging Attack

Effect: They resist the Triggering Attack by an additional Damage Step. After Damage Resolution, you may destroy 5 Stealth Rock Hazards within 3m of the Target to have the Frequency of this Feature refreshed.

Basalt Blockade

Prerequisite: Rock Specialist, Combat, Nature Edu or Poke Edu at Adept
Scene x2 - Free Action

Trigger: Your Pokemon use a Rock Type Attack with a Burst or Blast Range

Effect: After the Triggering Attack resolves, choose up to 6 Spaces within the Triggering Attack's Range that are unoccupied to have Stealth Rock Hazards or Blocking Terrain created in them. Blocking Terrain created this way is treated as Small.

Seismic Storm

Prerequisite: Rock Specialist, 3 Rock Specialist Features, Combat, Nature Edu or Poke Edu at Master
Scene - Special

Trigger: Your Pokemon use a Rock Type Damaging Attack

Effect: Your Pokemon must activate this Feature as a Swift Action when Triggered. Apply one Effect below to the Triggering Attack. You may destroy 3 Stealth Rocks within 3m of the Target to repeat the Effect of this Feature any number of times.

- » The Attack's Area of Effect is increased by +1 or becomes a Blast 2
- » The Attack gains the Smite Keyword or if it already had it, gains the Sureshot Keyword
- » This Feature's Frequency is refreshed.

STEEL SPECIALIST

Steel Specialists excel in training Pokemon that are the peak of technological marvels. These Pokemon tend to have great defensive capabilities and even if they are more offensive like Bisharp, being a specialist of this type enhances their abilities to sustain themselves.

Steel Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Steel as your chosen Type) **[or]**

Prerequisite 2: Focus, Poke Edu or Tech Edu at Adept Static

Effect: Non-Adjacent Attacks have a penalty to their Critical Hit Range, Effect Range and Accuracy Rolls against your Steel Type Pokemon equal to your Tier Level. Your Pokemon have a bonus to Effect Ranges for their Steel Type Attacks equal to your Tier Level.

Assault Armor

Prerequisite: Steel Specialist, Focus, Poke Edu or Tech Edu at Novice
Scene x3 - Free Action

Trigger: Your Pokemon hit a Steel Type Damaging Attack or Your Steel Type Pokemon hits a Physical Damaging Attack

Effect: The Triggering Pokemon may use their Defense as an Offensive Stat in place of its normal Offensive Stat.

Ironclad Resolve

Prerequisite: Steel Specialist, Focus, Poke Edu or Tech Edu at Expert
Scene x2 - Free Action

Trigger: Your Pokemon uses a Steel Type Attack

Effect: Choose an Effect below to apply to them until the start of their next Turn. If the Triggering Pokemon is a Steel Type, you may either ignore the Frequency of this Feature or apply all Effects below. Ironclad Resolve may only activate once per Round.

- » The User gains +3 to Save Checks
- » The User gains a Tick of Temporary Hit Points
- » The User has +3 Uncapped Evasion against non-Adjacent Attacks

Ironclad Bond

Prerequisite: Steel Specialist, Focus, Poke Edu or Tech Edu at Adept
Scene x2 - Free Action

Trigger: An Ally or Yourself that is adjacent to your Steel Type Pokemon would take Damage from a Physical Attack

Effect: When applying Damage Calculations, they may use the Defense Stat Value of the Steel Pokemon.

Bonus: You and your Allies that are adjacent to your Steel Type Pokemon may have their Physical Evasion treated as the Physical Evasion of that Pokemon.

True Steel Body

Prerequisite: Steel Specialist, 3 Steel Specialist Features, Focus, Poke Edu or Tech Edu at Master
Scene x2 - Free Action

Trigger: Your Pokemon is hit by a Damaging Attack

Effect: Your Pokemon gains Damage Reduction against the Attack equal to triple your highest Type Linked Skill Rank. Additionally, you may calculate Type Effectiveness against this Attack as if your Pokemon was only Steel Typed. A Pokemon may only be affected by True Steel Body once per Scene.

WATER SPECIALIST

Water Specialists excel in training Pokemon that live in bodies of water all around the world. Their training allows their water Pokemon to increase the strength of their water, allowing for bigger waves and possibly even persistent water typhoons that circle their enemies.

Water Specialist

[Advanced] [Class]

Prerequisite 1: Type Specialist (Water as your chosen Type) **[or]**

Prerequisite 2: Athletics, Intuition or Poke Edu at Adept Static

Effect: For each of your Pokemon, choose one of the tactics listed below. The style's effects apply to all of their Water Type Attacks. Your Water Specialist Features have different effects based on the Pokemon's chosen tactic.

» **Cascade** - Whenever you Target yourself or an Ally with a Water Attack, you both gain a Tick of Temporary Hit Points

» **Rapid** - All of your Damaging Water Attacks may be used as if their range were Melee, 1 Target, Dash.

» **Torrential** - While your Pokemon are under 50% Hit Points, their Water Attacks have a Damage Bonus equal to your Tier Value.

Hydro Deluge

Prerequisite: Water Specialist; Athletics, Intuition or Poke Edu at Novice
At-Will - Special

Effect: Your Pokemon may activate this Feature as a Swift Action to use their next non-Self or Field Water Type Attack as if its Range were Line 6, Burst 1, or Close Blast 2. Alternatively, if it already has an Area of Effect, increase it by +1. If the Weather is Rainy, this may be used once per Round as a Free Action as well.

Tidal Tactics

Prerequisite: Water Specialist; Athletics, Intuition or Poke Edu at Expert
Static

Effect: The Effect of this Feature varies based on the Pokemon's chosen tactic.

» **Cascade** - Your Water Type Damaging Attacks ignore the restriction on the Versatile Keyword and Help Maneuver, allowing them to still be used.

» **Rapid** - Whenever you activate the Dash Keyword, Targets cannot apply Speed Evasion against your Water Attacks

» **Torrential** - Whenever you use a Water Attack against a single Enemy, you gain the Damage Bonus from Water Specialist regardless if you're under 50% HP. If the Weather is Rainy, this applies to all Water Damaging Attacks you use.

Controlled Current

Prerequisite: Water Specialist; Athletics, Intuition or Poke Edu at Adept

Scene x2 - Special

Effect: Your Pokemon may activate this Feature as a Swift Action to apply the following Effect to their next non-Self or Field Water Attack, based on their chosen tactic.

» **Cascade** - Any Targeted Allies are cured of a Physical Affliction or have a Coat removed. If it was Damaging, they take no Damage.

» **Rapid** - The Attack gains the Pass Keyword. Instead of going in a straight line, you can change direction once during the movement.

» **Torrential** - The Attack has the Friendly and Smite Keyword.

Maelstrom Strike

Prerequisite: Water Specialist; Athletics, Intuition or Poke Edu at Master

Scene x2 - Free Action

Trigger: Your Pokemon use a non-Self or Field Water Type Attack

Effect: The Attack is altered based on their chosen tactic. Each of your Pokemon can only Trigger this once per Scene.

» **Cascade** - Any Allies within the Range of this Attack take no Damage from it and restore 5 Ticks of Hit Points

» **Rapid** - This also Targets all Enemies that are Adjacent to the original Target(s) of this Attack

» **Torrential** - The Attack has the Sureshot Keyword and cannot Trigger Reactions.

GENERAL RESEARCHER

Some Trainers don't really have a research specialty and prefer to study a general topic or study a wide array of topics. General Researchers excel at being a jack of all trades and being able to be decent and good at multiple topics or subjects.

General Researcher

[Base] [Class]

Prerequisite: Novice Gen Edu

Static

Effect: You may Rank up two different Skills you're able to upgrade. Whenever you make a Skill Check for an Education Skill other than General Edu, you may add 1d6 to the roll. When you reach Expert Gen Edu, instead add 2d6. You cannot exceed 6d6 this way.

Dilettante

[Ranked 2]

Rank 1 Prerequisite: General Researcher, Novice Gen Edu

Rank 2 Prerequisite: General Researcher, Expert Gen Edu
Static

Effect: Each Rank of Dilettante, you may perform two different options below. You do not need to meet the Skill prerequisites of chosen Talents or General Features. You must meet any other Prerequisites and have a General Education Skill Rank equal to the highest listed Skill Prerequisite of the chosen Feature or Talent. Whenever you gain a Feature or Talent this way, change any Skill Ranks or Skill Checks used directly by the Talent or Feature into General Education Skill Checks or Rank applications instead.

- » You gain a General Feature
- » You gain a Talent
- » You upgrade two different Skills by a Rank

Example: If a Feature says it requires Adept Athletics, it becomes Adept General Edu.

General Studies

[Ranked 2]

Rank 1 Prerequisite: General Researcher, Adept Gen Edu

Rank 2 Prerequisite: General Researcher, Master Gen Edu
Static

Rank 1 Effect: Choose a Skill that is at least Novice Rank to be your Trained Skill. Then choose a Feature in a Class without the [Class] Tag that has at most Adept Rank Prerequisites for its Skills and lists your Trained Skill. You gain that Feature despite not meeting its prerequisites.

Rank 2 Effect: Choose a Feature in a Class without the [Class] Tag that has at most Expert Rank Prerequisites for its Skills and lists your Trained Skill. You gain that Feature despite not meeting its prerequisite.

Example: If you choose your Trained Skill to be Combat, you can take Features from the Gladiator Class despite not having the Gladiator Feature listed in its prerequisites.

Example

Myra Witherbloom is an aspiring florist but doesn't know too much about nature despite studying about it a lot. She takes Nature Edu as her Trained Skill.

For the first Rank of General Studies, she takes the Floral Diversity Feature from the Herbalist Class, allowing her to have access to more Seed Bag Attacks.

For her second Rank of General Studies, she take the Survival Instincts Feature from the Nature Researcher Class, since she knows a lot about surviving in the wilderness.

CHRONICLER

Characters with talented insight, good memory and the ability to take notes will likely be most comfortable as a Chronicler. These Characters absorb the world around them and analyze observations in order to gain an edge over the competition and any challenge they face.

Chronicler

[Advanced] [Class]

Prerequisite 1: General Researcher **[or]**

Prerequisite 2: Adept Chronicler Skill
Static

Effect: Whenever you use the Analyze Maneuver on a Pokemon or Trainer and pass its associated Skill Check (If any), they become Studied. If you would need to make a Skill Check for an Analyze Maneuver that isn't a Chronicler Skill, you may add 2d6 to the roll, but it cannot exceed 6d6 this way.

Note - Chronicler Skills are Gen Edu, Intuition or Perception. Some common aspects to ask about during Combat for Analyze Maneuvers are the Combatant's battle stance, their body language, their disposition, or what attack they look like they're preparing.

Character Profile

Prerequisite: Chronicler, two Chronicler Skills at Novice Rank

Scene - Free Action

Trigger: You or your Pokemon use a Maneuver with an Accuracy Check

Effect: The Maneuver automatically hits but still must make an opposed check if applicable.

Bonus: You have a Boon to all Skill Checks involving Studied Creatures. If they were permanently Studied, you also treat the Skill as one Rank higher than it is.

Analyzed Reflexes

Prerequisite: Chronicler, 2 Chronicler Features, an Expert Chronicler Skill

At-Will - Special

Trigger: You or your Pokemon use an Attack

Effect: The Triggering Combatant must spend a Reaction to use this Feature. Targets of the Triggering Attack cannot use Reactions in response to the Triggering Attack and they cannot apply Stat Evasion against it. If the Target is Studied, the Triggering Combatant can use this Feature as a Free Action.

Studied Weakness

Prerequisite: Chronicler, an Adept Chronicler Skill

Scene x2 - Swift Action

Trigger: You or your Pokemon hit a Flanked Enemy or would hit a Super Effective Attack against an Enemy

Effect: Targets of the Triggering Attack cannot use Reactions in response to it. If the Target is Studied, they become Vulnerable until the end of the Round.

Predictable

Prerequisite: Chronicler, 3 Chronicler Features, a Master Chronicler Skill

Scene - Free Action

Trigger: You or your Pokemon are hit with an Attack

Effect: They resist the Triggering Attack by an additional Damage Step. Once per Scene, if the Triggering Attacker is Studied, you may choose to either not expend the Frequency of this Feature or instead cause the Attack to miss.

Mechanic - Studied

Your Chronicler Features have a benefit when used against Enemies that are Studied. At the end of the Session, Enemies are no longer considered to be Studied, however if you cause the same Creature to become Studied at least three times over the course of a Campaign, they become permanently Studied in all future Encounters with them. (If you study 3 different Charmander, all Charmander become Studied)

At your GM's Discretion, Creatures may be Studied as an Extended Action even if Combat hasn't occurred, however the User must have either passed a Skill Check with the intent to learn more about the Target or spent a Downtime Action with the Target somehow (Such as Socializing or Training or even reading about the Target). This should not be used to start the Scene with a Creature Studied, but more to count towards the three times to permanent studied bonus without needing to get into a Combat Scene with them in addition to studying allies to interact with them better.

MUSICIAN

Trainers who follow the path of a Musician come in many vocations and profession, though most adore the spirit of music. Whether as a musician or a vocalist, Musicians regal those around them with inspiring tales from journeys past or songs from the soul.

Musician

[Advanced] [Class]

Prerequisite 1: General Researcher or Performer **[or]**

Prerequisite 2: Adept Musician Skill

At-Will - Swift Action

Effect: You create a Zone of Song in a Burst 2 range centered on you. When the Zone is created, choose a song below to apply to all listed Combatants within this Zone. A Combatant cannot benefit from multiple Zones of Song. The chosen song can be changed as a Free Action at the start of your Turn. Whenever you use a Reaction, this Zone is removed.

Note- Your Musician Skills are- Gen Edu, Guile, Charm & Focus.

Tools for Tales

Prerequisite: Musician, two Novice Musician Skills
Static

Effect: You learn the Attack Sing and Moral Support. While you have a Bardic Instrument Equipped, you have the following Attacks added to your Attack list, Echoed Voice and Uproar. When you have at least 4 Musician Features, you also add Hyper Voice. When you have 5 Musician Features, you also add Boomburst.

Inspiring Presence

Prerequisite: Tools for Tales, an Expert Musician Skill, an Adept Musician Skill
Scene x2 - Swift Action

Trigger: You use a Sonic Attack

Effect: Choose an Ally or Enemy within the Range of the Triggering Attack. If you choose an Ally, they're cured of a Mental Affliction. If you choose an Enemy, until the end of their next Turn, they become Entranced or Provoked A Combatant can only be affected by Inspiring Presence once per Scene.

Bonus: Your Attacks with the Sonic Keyword gain the Friendly keyword.

Bardic Influence

Prerequisite: Musician, an Adept Musician Skill

At-Will - Reaction

Trigger: An Ally within 5m performs a Save Check, Skill Check in Combat or an Accuracy roll

Effect: The Triggering Ally adds a 1d6 to their Triggering Roll, or 2d6 if the user is Tier 3.

Bonus: Once per Round you may use Bardic Influence as a Free Action if the Triggering Ally is within your Zone of Song.

Motivating Performance

Prerequisite: Musician, 3 Musician Features, a Master Musician Skill, an Adept Musician Skill
Scene x3 - Free Action

Trigger: An Ally starts their Turn within your Zone of Song

Effect: Choose an Effect to apply to the Triggering Ally:

- » They gain +1 CS in a Stat of their Choice
- » They gain the benefits of a different Song as well
- » They gain double the Effects of the Song played

Musician Songs

» **Song of Despair** - Enemies that start their Turn within your Zone of Song have a Penalty to Critical Hit Ranges, Effect Ranges and Save Checks equal to your Tier Level until the end of their Turn.

» **Song of Inspiration** - The user and all Allies within your Zone of Song have a bonus to Save Checks and Effect Ranges equal to your Tier Level.

» **Song of Life** - The user and all Allies within your Zone of Song restore Hit Points equal to their Tick Value when they end their Turn within your Zone of Song. If they already have Max Hit Points, they instead get a Tick of Temporary HP

» **Song of Valor** - The user and all allies have a bonus to Damage Rolls equal to your Tier Value while within the range of this Song.

MEDICINE RESEARCHER

If not for medicine researchers, perhaps Pokemon fighting would be much more limited. However, thanks to modern medicine, potions may be crafted which have near instantaneous medical effects, allowing Medicine Researchers to be very beneficial to any adventuring party.

Medicine Researcher

[Base] [Class]

Prerequisite: Novice Med Edu

Static

Effect: Whenever you Use or Throw a Basic Healing Potion, you ignore the following restriction: "A Combatant cannot be Targeted by a Healing Potion more than once per Scene". When you have at least 4 Medicine Researcher Features, this also extends to Greater Healing Potions.

First Aid Training

Prerequisite: Medicine Researcher, Novice Med Edu
Scene x2 - Free Action

Trigger: An Adjacent Ally

Effect: You may use the Help Maneuver on the Target as a Free Action. You may still use the Maneuver this way even if you used a Damaging Attack this Round and may still use one after the Maneuver resolves. An Ally can only be Targeted by First Aid Training once per Scene.

Quick Fix

Prerequisite: Medicine Researcher, 2 Medicine Researcher Features, Expert Med Edu
Scene x2 - Swift Action

Effect: You may use a "Healing Potion" Item as a Free Action. A Combatant may only be Targeted by Quick Fix once per Scene and this can only Target Allies.

Medicinal Mastery

Prerequisite: Medicine Researcher, Adept Med Edu
Scene x2 - Free Action

Trigger: You use or Throw a "Potion" Item on yourself or a single Ally

Effect: Choose one of the following Effects to apply. This cannot be Triggered on Potions used through the Quick Fix Feature.

- » The Target restores a Tick of Hit Points
- » The Target is cured of a Status Affliction
- » The Target gains Damage Reduction against the next Attack they're hit by equal to your Tier Value.

Stay With Us!

Prerequisite: Medicine Researcher, 3 Medicine Researcher Features, Master Med Edu
Scene - Reaction

Trigger: An Ally within 3m would Faint

Effect: You may immediately Throw or Use a "Potion" Item on the Triggering Ally as a Free Action. If you plan to Use a "Potion", you may Slide up to 3m as a Free Action towards the intended Target. After resolving the condition that caused the Triggering Ally to Faint, they apply the Effects of the Potion, not being treated as Fainted yet. If they would end with an Hit Point value above 0, they are instead not Fainted from the Triggering condition.

ALCHEMIST

Some Medical Researchers pursue the study of natural elements and chemicals in the pursuit of creating potions. Depending on the ingredients, the effects can vary wildly, however the pursuit of Alchemy is one that leads to wide flexibility and is near limitless.

Alchemist

[Advanced] [Class]

Prerequisite 1: Medicine Researcher **[or]**

Prerequisite 2: Adept Med Edu

Scene x2 - Swift Action

Effect: Choose any "Basic Potion" Item. You may instead choose a "Greater Potion" Item if you have at least 4 Alchemist Features. Then apply any Effect below:

- » You create the chosen Item and it is added to your Inventory, however, it is destroyed at the end of the Scene.
- » One Item in your Inventory that matches the declared Item cannot miss when next used with a Throw Maneuver.

Caustic Chemistry

Prerequisite: Alchemist, Novice Med Edu

Scene x2 - Special

Trigger: You use a Throw Maneuver with a "Potion" Item

Effect: As a Swift Action, the Range is changed to either X, Ranged Blast 2, or Close Blast 2. As a Swift+Movement Action, it is changed to either X, Ranged Blast 3, or Close Blast 3. X is equal to your Throwing Range as stated in the Throw Maneuver.

Bonus: The Throw Maneuver's AC is treated as 2 when Throwing a "Potion" Item.

Mutated Mixture

Prerequisite: Alchemist, 2 Alchemist Features, Expert Med Edu

Static

Effect: Whenever you use a "Potion" Item listed below, you may instead treat their Effects as the following. An Enemy can only be affected by an Item adjusted this way once per Scene.

- » **Healing Potion** - The Target loses 2d3 Ticks of Hit Points and cannot restore Hit Points until the end of their next Turn.
- » **Malady Potion** - The Target is instead cured of the listed Affliction.
- » **Strength or Vitality Potion** - The Target instead has a negative Modifier or loses Combat Stages in the value specified by the potion. If the Target has a Negative Modifier this way, it is treated as a Physical Status Affliction that may be cured.

Elemental Elixirs

Prerequisite: Alchemist, Adept Med Edu

Bind 2 - Extended Action

Target: A "Potion" Item in your Inventory Slot that isn't "Healing" and a Willing Pokemon

Effect: Choose a Type that the Targeted Pokemon has. That Type is applied to the Targeted Item while this Feature is Bound. Whenever the Targeted Item is used in Combat, all Targets hit by the Item are treated as though they were hit with a Special Category Attack of the chosen Type. The Damage Base is equal to double your Med Edu Rank. Instead of an Offensive Stat, make a Medicine Edu Check and add that as a Damage Modifier. If you are Tier 3, add twice that result as a Damage Modifier.

Experimental Brew

Prerequisite: Alchemist, 3 Alchemist Features, Master Med Edu

Scene x2 - Full Action

Effect: You may use a Throw Maneuver as a Free Action, however you may expend 2 different "Potion" Items when doing so, one being "Basic" and the other being either "Basic or Greater". Their Effects are combined and both applied to the Target if they hit. The chosen Potions cannot have the same Name.

Brewing Example

You cannot expend a Basic and Greater Healing Potion or a Basic and Greater Malady Potion. You also cannot expend two of the same Potion but with different effects such as a Basic Malady Potion (Paralyze) and Basic Malady Potion (Burn). You can however combine a Basic Strength Potion with a Greater Healing Potion.

APOTHECARY

Some Trainers who research medicine go the more natural and herbal route compared to chemically processed. Apothecaries can either process poultices out of potions or find them naturally in the wild and use their wide array of curative properties to help their allies.

Apothecary

[Advanced] [Class]

Prerequisite 1: Medicine Researcher [or]

Prerequisite 2: Adept Med Edu and Novice Nature Edu

Scene x2 - Swift Action

Condition: You're in an area with floral life

Effect: You gain 2 Simple Poultice. If you have Expert Nature Edu, you instead gain 2 Greater Poultice or 3 Simple Poultice.

Bonus: You gain the Herb Crafter Talent, even if you don't qualify for it. Your "Poultice" Items are treated as "Healing Potions" for the sake of Triggers and Effects from Medicine Researcher.

Natural Variety

Prerequisite: Apothecary, Novice Med Edu or Nature Edu
Static

Effect: When using a Poultice as a Standard Action, you may choose any of the following Effects as well to apply instead of the listed ones.

- » The Target gains a +2 Modifier to their choice of Accuracy or Save Checks for the rest of the Scene. If it is a Greater Poultice, they instead gain +3.
- » The Target gains +2 CS in a Stat of your Choice. If it is a Greater Poultice, they choose two Stats.
- » The Target gains three Ticks of Temporary Hit Points. If it is a Greater Poultice, they also restore two Ticks of Hit Points.

Protective Salve

Prerequisite: Apothecary, 2 Apothecary Features, Expert Med Edu or Nature Edu
Scene x2 - Full Action

Target: Yourself or an Adjacent Ally

Effect: Expend a Poultice, then the Target gains a Salve Coat. While a Target is affected by a Salve Coat, they have +3 to Save Checks. The Target may expend the Salve Coat to benefit from the Poultice's Effect or an Effect from the Natural Variety Feature. A Combatant may only gain a Salve Coat once per Scene.

Botanical Purity

Prerequisite: Apothecary, Adept Med Edu or Nature Edu
Scene x2 - Free Action

Target: Yourself or an Adjacent Ally

Effect: Expend a Poultice, then apply one of the following Effects to the Target.

- » All Negative CS are reset to their Default CS Value
- » One Coat is removed from the Target
- » The Target is cured of a Status Affliction

Natural Remedies

Prerequisite: Apothecary, 3 Apothecary Features, Master Med Edu or Nature Edu
Scene - Swift Action

Trigger: You use a Poultice

Effect: The Effects of the Triggering Item do not apply immediately. At the start of your next Turn, the Poultice's Effects apply, however any numerical values are doubled. If the Target is fainted, this Effect may still apply and revives them.

NATURE RESEARCHER

Trainers that follow the path of a nature researcher specialize in, well, being in nature. Their primary benefit is choosing a type of terrain to excel in, such as living in a Tundra for most of your life. When you do, you gain benefits from having lived there long specific to the terrain.

Nature Researcher

[Base] [Class]

Prerequisite: Novice Nature Edu

Static

Effect: When you gain this Feature, you gain the Naturewalk Capability with a Terrain of your choice. While you're in Terrain that matches one of your Naturewalks, you gain a bonus to Accuracy Rolls equal to your Tier Level. (This bonus does not stack with itself)

Wild Trapper

Prerequisite: Nature Researcher, Novice Nature Edu
At-Will - Special

Effect: As a Swift Action, choose up to 3 Unoccupied Spaces that are continuous with each other and start in an Adjacent Space to create one of the following Hazards in it. If you're in Terrain that matches one of your Naturewalk Capabilities, you instead may choose up to 6 Spaces or use this as a Free Action once per Round. This may be used as an Extended Action to create a Trap that is a 3x3 Zone instead, which takes 10 Minutes to set up.

Wild Trapper Options are on the next page

Natural Connection

Prerequisite: Nature Researcher, 2 Nature Researcher Features, Expert Nature Edu
Bind 1 - Swift Action

Target: An Allied Pokémon within 3m of you

Effect: While you're within 3m of the Target, you're treated as being in the Terrain(s) listed under its Naturewalk Capability for the sake of Effects.

Bonus: You gain the Naturewalk Capability with a Terrain of your choice.

Survival Instincts

Prerequisite: Nature Researcher, Adept Nature Edu
Scene - Reaction

Effect: You are cured of a Status Affliction. If you're in Terrain that matches one of your Naturewalk Capabilities, this may also be used as a Swift Action

Bonus: While you're in Terrain that matches one of your Naturewalk Capabilities, you gain a bonus to Save Checks equal to your Tier Level. (This bonus does not stack with itself)

Wild Adaptation

Prerequisite: Nature Researcher, 3 Nature Researcher Features, Master Nature Edu
Static

Effect: Choose a Terrain listed on the next page for which you have the corresponding Naturewalk and gain the listed Ability. For each Naturewalk you have, you gain the listed Static Effect after the corresponding Terrain.

Wild Adaptation Options are on the next page

NATURE RESEARCHER CHARTS

Wild Trapper Hazards

Dust Trap

Effect: Spaces with Dust Traps are treated as Rough Terrain. An Enemy that enters a Space affected by this Hazard have a penalty to Accuracy equal to double your Tier Level until the end of their next Turn. This is ignored by Enemies with Blindsense.

Pitfall Trap

Effect: Spaces with Pitfall Traps are treated as Slow Terrain. A Grounded Enemy that ends their Turn on a Pitfall Trap becomes Tripped and Weakened while Tripped this way.

Slow Trap

Effect: Spaces with Slow Traps are treated as Slow Terrain. A Grounded Enemy that enters a Space affected by this Hazard has their Speed lowered by -3 CS, becomes Slowed and is Vulnerable while Slowed this way.

Spiked Trap

Effect: Spaces with Spiked Traps are treated as Slow Terrain. Any Grounded Enemy that passes through a Spiked Trap loses two Ticks of Hit Points and cannot gain Hit Points or Temporary Hit Points until the end of their next Turn.

Wild Adaptation List

Grassland

Ability: Aroma Veil

Static Effect: You gain the Quick Capability.

Forest

Ability: Flower Veil

Static Effect: You gain the Blender Capability.

Wetlands

Ability: Mud Dweller

Static Effect: You are Immune to the Poisoned Affliction.

Tundra

Ability: Snow Cloak

Static Effect: You are Immune to the Chilled Affliction.

Mountain

Ability: Rough Skin

Static Effect: You gain the Climber Capability.

Cave

Ability: Cave Dweller

Static Effect: You have a Boon to Perception Checks while in the dark.

Desert

Ability: Desert Weather

Static Effect: All Accuracy Penalties against you are reduced by 2. (-3 Penalty is reduced to -1)

Ocean

Ability: Hydration

Static Effect: You gain the Swimmer Capability.

Urban

Ability: Pickpocket

Static Effect: Whenever you would perform a Body Skill Check in Urban Terrain, you may instead use your Nature Education.

Space

Ability: Starlight or Sunglow

Static Effect: You have a Boon to all Skill Checks involved with traversing or battling in Space Terrain.

NOMAD

Nomads are Trainers that are wanderers by nature. They've probably already journeyed across the region from town to town and their survival skills display this prowess. Nomads specialize in using their inventory to the fullest and always have an item on hand to use.

Nomad

[Advanced] [Class]

Prerequisite 1: Nature Researcher **[or]**

Prerequisite 2: Adept Gen Edu or Nature Edu

Static

Effect: While you're in Terrain that matches one of your Naturewalk Capabilities, you cannot become Slowed or Tripped. You gain 2 Inventory Slots and another 2 when you have 3 Nomad Features and another 2 when you have 5 Nomad Features. You cannot have more than 12 total Inventory Slots.

Improvised Items

Prerequisite: Nomad, Novice Gen Edu or Nature Edu
Scene x2 - Free Action

Trigger: You use the Throw Maneuver

Effect: It gains the Sureshot Keyword or the Throw Maneuver's range becomes Ranged Blast 2.

Venerable Vagabond

Prerequisite: Nomad, Expert Gen Edu or Nature Edu
Static

Effect: Choose two of the Effects below to apply. You may choose the same one twice if desired.

- » You gain the Skill Specialty Talent
- » Choose one [Consumable] Item. Whenever you possess it, it has the [Resource] Keyword.
- » Choose one Item that isn't [Consumable] or [Equipment]. It gains the [Trinket] Keyword.
- » Choose two Terrains to gain the Naturewalk Capability for.

Traveling Caravan

Prerequisite: Nomad, Adept Gen Edu or Nature Edu
Bind 1 - Extended Action

Target: A Small or Medium [Equipment] Item in one of your Inventory Slots

Effect: While this Feature is bound, the Targeted Item is treated as being Equipped, despite being in an Inventory Slot.

Bonus: When you have 5 Nomad Features, this Feature becomes Bind 2, instead.

Supply Tactics

Prerequisite: Nomad, 3 Nomad Features, Master Gen Edu or Nature Edu

Scene x2 - Special

Effect: Choose one of the following effects to apply:

- » As a Swift Action, you may use an Item that would normally require a Standard Action.
- » As a Free Action, you may use an Item that would normally require a Swift Action.
- » As a Swift Action, you may use a Throw Maneuver.

The gameplay of Nomad revolves around using items better and more efficient than normal Trainers. As such, their strength lies in the versatility of Items they can bring to an Encounter and additional Equipment space. As a GM, make sure your Nomad has regular access to items such as Potions or Hazard Bags or even Harnessed Attack Items that are cheaper than the treasure rarity!

HERBALIST

Herbalists are Trainers who share a deep connection with nature, likely having a deep knowledge of flora in their region. Herbalists tend to use this knowledge offensively, being able to utilize seeds and powder to cause ailments in their enemies while others wield steel.

Herbalist

[Advanced] [Class]

Prerequisite 1: Nature Researcher [or]

Prerequisite 2: Adept Nature Edu

Static

Effect: You gain the Seed Bag Item and it gains the [Trinket] Keyword and is always treated as Equipped. If it were to occupy an Equipment Slot despite having the [Trinket] keyword, you have a bonus to Accuracy equal to your Tier Level for Attacks provided by it and the Herbalist Class.

Seed Spray

Prerequisite: Herbalist, Novice Nature Edu
At-Will - Swift Action

Trigger: You use an Attack provided by the Seed Bag Item

Effect: You may use the Triggering Attack as if its range was 6, Ranged Blast 3 or Close Blast 2.

Bonus: You learn the Attack Bullet Seed. At Expert Rank Nature Edu, you learn the Attack Seed Bomb.

Seed Specialist

Prerequisite: Herbalist, 2 Herbalist Features, Expert Nature Edu

Scene - Free Action

Target: An Attack on your Attack list that was granted by the Seed Bag Item

Effect: The Targeted Attack has its Frequency fully replenished.

Bonus: The Maximum Attacks your Seed Bag can grant are 6 attacks instead of 3.

Floral Diversity

Prerequisite: Herbalist, Adept Nature Edu

Static

Effect: When adding Attacks to your Seed Bag, you also may choose from the following Attacks:

» Cotton Spore, Magic Powder, Powder, Rage Powder, Spore, Worry Seed

Potent Powder

Prerequisite: Herbalist, 3 Herbalist Features, Master Nature Edu

Scene x2 - Free Action

Trigger: You miss all Targets with an Attack provided by your Seed Bag or a Herbalist Feature

Effect: Repeat the Triggering Attack as a Free Action with different Targets if desired. If the Triggering Attack was Damaging, it's resisted by an additional Damage Step. If the Triggering Attack was a Status Category, it applies the Versatile Effect instead if applicable (Ignoring any changes to AC or Range).

Seed Bag Reference- As a Downtime Action, add 3 of the following Attacks to your Seed Bag or switch out any number of Attacks in the Bag with others listed Attacks. While Equipped, you may use the chosen Attacks as if they were on your Attack List. You cannot have more than 3 Attacks in your Seed Bag. The Available Attacks are: Leech Seed, Burn Powder, Mystic Powder, Sleep Powder, Stun Spore, Poison Powder [Large] [Equipment]

OCCULT RESEARCHER

Having supernatural abilities doesn't always come naturally. Some need to actually study the occult in order to gain an understanding of it and possibly gain powers. Those who do study it however gain a deeper understanding of the topic and end up being even stronger.

Occult Researcher

[Base] [Class]

Prerequisite: Novice Occult Edu

Static

Effect: Upon gaining this Feature, choose a [Class] Feature that has Occult Researcher as a Prerequisite and you gain it as a Bonus Feature, becoming your Linked Class. When Features in a Linked Class refer to a Skill, you may replace it with Occult Education.

Example: Empath's Twisted Emotions can be taken with Novice Occult Edu instead of Intuition. Using the Empath Feature may use Occult Education instead of Intuition vs their Focus.

Esoteric Knowledge

[Ranked 2]

Rank 1 Prerequisite: Occult Researcher, Novice Occult Edu

Rank 2 Prerequisite: Occult Researcher, Expert Occult Edu
Static

Effect: Choose a Supernatural Topic that your Character is studying to become your Occult Study. For each Rank, gain two effects listed below that are related to your Occult Study. Coordinate with your GM for an Effect that is most applicable to what your Character has studied and would benefit from as a result.

- » Choose a Type related to your Occult Study. You now treat this Type as Resisted. This can only be gained once per Rank.
- » You gain a Boon to Skill Checks involving your Occult Study. If your Occult Study is generic (GM Discretion), choose two niche aspects of it to gain a Boon for
- » Choose a Capability related to your Occult Study to gain.
- » Choose an Item related to your Occult Study. You can now create this Item during Crafting Downtime Actions. If it is an [Equipment] Item, it gains the [Trinket] Keyword. If it is a [Consumable] Item, it gains the [Resource] Keyword.

Arcane Recovery

Prerequisite: Occult Researcher, Adept Occult Edu
Scene - Swift Action

Effect: Choose a Feature on your Linked Class, an Attack granted by your Linked Class or an Ability granted by your Linked Class. Its Frequency is restored by one additional usage.

Occult Efficiency

Prerequisite: Occult Researcher, 3 Occult Researcher Features, Master Occult Edu
Scene - Free Action

Effect: Choose a Feature on your Linked Class, an Attack granted by your Linked Class or an Ability granted by your Linked Class. During this Turn, the Feature's Action Cost is improved by one step. If it uses a Full Action, it becomes a Standard. If it was a Standard it becomes a Swift. If it was a Swift or Reaction it becomes Free. If it becomes free it can only be used once this Turn.

Esoteric Knowledge Examples

1. My Character is a Ghost Type Specialist who took the Occult Researcher Class and the Empath Class as a result. Ghost Hunting is my specialty (Occult Study) so for my first Rank, I chose to resist Ghost Type Attacks and I coordinated with my GM to create a device that traps Ghost Types when used. For my second Rank, I gained the Telepath Capability but can only use it to communicate with Ghosts, and then I made a device that can make Ghosts Weakened for a Full Round when hit.
2. My Character is a Fighter, Monk and Occult Researcher who took the Aura Guardian Class as a result. Aura and Ki are my specialty (Occult Study) so for my first Rank, I chose to Resist Fighting Type Attacks and then I chose to gain the Illusionist Capability, as I can manifest my Aura visibly this way. For my second Rank I chose to gain the Tremorsense Capability as I can see Aura through objects, and whenever I make an opposed check for someone to notice my Aura Illusions, I roll twice, taking the higher result.

HEX MANIAC

Researchers of the more darker side of the occult, Hex Maniacs are scholars that are adept in hexes and curses. Often seen as witches and warlocks, these Trainers specialize in inflicting ailments on enemies and inflicting numerous curses that have a wide array of effects.

Hex Maniac

[Advanced] [Class]

Prerequisite 1: Occult Researcher or Mystic **[or]**

Prerequisite 2: Adept Occult Edu, Novice Intimidate

At-Will - Free Action

Trigger: An Enemy within 5m misses an Attack

Effect: The Target gains a Hexed Coat. While they have this Coat each time they fail a Save Check, they have their Stat with the highest CS lowered by -2 CS. (Choose on tie)

Bonus: Choose two Attacks to learn. When you have 5 Hex Maniac Features, you learn the ones you didn't choose.

» Confuse Ray, Curse, Haunting Aura, Malice

Witchcraft Curses

[Ranked 2]

Rank 1 Prerequisite: Hex Maniac, Novice Occult Edu or Intimidate

Rank 2 Prerequisite: Hex Maniac, Adept Occult Edu or Intimidate
Static

Effect: For each Rank, choose two Witchcraft Techniques on the next page to learn. Whenever you cause an Enemy to gain a Hexed Coat, you may apply one Witchcraft Technique you know to them which lasts while they have the Coat. Each Witchcraft Technique has a Curse Effect that can be applied in the following methods. Only one Creature can be affected by a Curse Effect at a time.

» A Curse Effect can occur with a Downtime Action by expending a suitable personal object relating to the Target. This applies the Curse Effect for 24 Hours.

» A Curse Effect can occur as an Extended or Swift Action by expending 1 SP when touching a creature. When doing this, perform an Occult Edu or Intimidate Check opposed by their Focus and if they win, they're immune to the Curse for the next 24 Hours and are aware you did so, otherwise it applies for the next Hour.

Forbidden Studies

Prerequisite: Hex Maniac, Expert Occult Edu or Intimidate
Static

Effect: Choose a Forbidden Study to gain its associated Ability in parenthesis.

» **Control** (Shadow Tag), **Fate** (Probability Control),
Malediction (Cursed Body), **Pain** (Voodoo Doll)

Lingering Curse

Prerequisite: Hex Maniac, Master Occult Edu or Intimidate
Scene x2 - Reaction

Trigger: A Mental Affliction would be cured or a Combatant with a Mental Affliction would faint

Effect: Choose an Effect to apply:

» Choose an Enemy with a Hexed Coat within 5m of the Triggering Combatant to gain the cured Affliction or a Mental Affliction the Fainted Enemy had

» Cursed Hazards are created within a 3x3 Zone, centered on the Triggering Combatant as if it were Hazardous Terrain. Whenever an Enemy would trigger this Hazard, they gain the cured Affliction or a Mental Affliction the Fainted Enemy had.

Witchcraft Techniques

Hex of Delusion

Effect: If the Hexed Enemy becomes Dazed, they cannot Target their Allies with Attacks or Abilities and cannot perform Bolster Maneuvers as well. Whenever they become Cursed or Suppressed, you may instead have them become Dazed.

Curse: You gain Illusionist Capability for the Duration of this Curse but only the Target sees them.

Hex of Enchantment

Effect: If the Hexed Enemy becomes Entranced, you're also treated as the Fixation. If you Entrance them, you may choose an additional Fixation for them to have. Whenever they become Cursed or Suppressed, you may instead have them become Entranced.

Curse: You have a Boon to Charm and Guile Checks against the Target for this duration.

Hex of Foresight

Effect: Whenever the Hexed Enemy would Trigger an Effect that you or your Pokemon would need to use a Reaction to activate, it instead is a Free Action. You have a bonus to evasion against the Hexed Enemy equal to your Tier Level.

Curse: For this duration, you are treated as having the Premonition Capability but only regarding actions involving the Target.

Hex of Insight

Effect: You learn 3 facts about them from the GM which may include their knowledge of their Abilities, Attacks, Progression choices, Equipped Items, etc. This is treated as using the Analyze Maneuver.

Curse: For this duration, you are treated as having the Telepath Capability but only against the Target. If used as a Downtime Action, they ignore the 10m range to the Capability.

Hex of Madness

Effect: The Hexed Enemy immediately becomes Enraged, however if they are cured of the Enraged Affliction, the Hexed Coat is also removed. While they're Enraged this way, they cannot be cured of Afflictions other than Enraged.

Curse: The Target's mood becomes much more volatile and rash for this duration.

Hex of Sealing

Effect: If the Hexed Enemy becomes Suppressed, all of their Attack Frequencies are treated as one step higher (At-Will to EOT)I. Whenever they become Cursed, you may instead have them become Suppressed.

Curse: Choose a Capability you know the Target has to become disabled for this duration.

Hex of Weakness

Effect: While Hexed, choose a Type they currently resist or are Immune to. They treat the Effectiveness as Neutral instead. While they're Hexed and affected by a Mental Affliction, they are Vulnerable

Curse: The Target has a Bane on all Skill Check for this Duration.

GM Note - Researching new Witchcraft techniques can be a good reward for Players who take this Class! Have it be a Research Long Term Project and allow them to get custom curses or possibly hexes. Depending on the tone of your Campaign, the severity of the curses could differ but for the base system, they're more tame.

SAGE

Compared to Hex Maniacs, Sages are on the other side of the spectrum when it comes to studying the occult. These Trainers specialize in restorative and protective powers such as warding and barriers that can prevent their allies from becoming harmed during fights.

Sage

[Advanced] [Class]

Prerequisite 1: Occult Researcher or Mystic **[or]**

Prerequisite 2: Adept Occult Edu, Novice Focus

At-Will - Special

Trigger: You or an Ally within 5m would take Damage

Effect: Expend an Action listed below and apply its effects to all Combatants hit by the Triggering Attack:

» **Standard** - All Targets resist the Triggering Attack by an additional damage step

» **Swift or Reaction** - They gain Damage Reduction against it equal to your Tier Value. If you expend both a Swift and Reaction, it is instead double your Tier Value.

Abjorative Research

Prerequisite: Sage, Novice Occult Edu or Focus Static

Effect: You may learn two Attacks from the Novice Attack List below. Once you have 4 Sage Features you learn the other two Attacks from the Basic List and one Attack from the Expert Attack List below.

» **Novice** - Light Screen, Lucky Chant, Reflect, Safeguard

» **Expert** - Heal Bell, Mystic Circle, Protect, Wish

Sacred Studies

Prerequisite: Sage, Expert Occult Edu or Focus Static

Effect: Choose a Sacred Study to gain its associated Ability in parenthesis.

» **Blessings** (Blessed Touch), **Revitalization** (Natural Cure), **Tranquility** (Gentle Vibe), **Warding** (Magic Guard)

Protective Ward

Prerequisite: Sage, Adept Occult Edu or Focus Scene x2 - Free Action

Trigger: An Ally gains Damage Reduction as a result of the Sage Feature

Effect: The amount of DR they gained against the Attack persists until the start of your next Turn or end of their next Turn, whichever comes second. For this duration, they also have a bonus to Save Checks equal to your Tier Level.

Reactive Shielding

Prerequisite: Abjorative Research, Master Occult Edu or Focus

Scene x2 - Reaction

Trigger: You or an Ally gains an Affliction, misses an Attack, or is hit by a Damaging Attack

Effect: If the Trigger was gaining an Affliction, it becomes cured. If it was missing an Attack, it instead hits. If it was being hit by a Damaging Attack, it is resisted by an additional damage step.

POKEMON RESEARCHER

These Trainers excel at interacting with Pokemon, having a wealth of knowledge that they can apply to all situations. Unlike normal Pokemon Trainers, these Researchers practically have a Pokedex memorized and can use it to their advantage

Pokemon Researcher

[Base] [Class]

Prerequisite: Novice Poke Edu

Static

Effect: When interacting with Pokemon, you may add a bonus to the Skill Check depending on your Poke Edu Rank. If it is Adept or under, roll +1d6 more. If it is Expert or higher, roll +2d6 more. You cannot exceed (6d6) this way and this does not apply to Poke Edu Skill Checks.

Field of Study

Prerequisite: Pokemon Researcher, Novice Poke Edu Static

Effect: When you gain this Feature, determine a category of Pokemon that you specialize in. You and your Pokemon have a bonus to Damage Rolls and Damage Reduction equal to your Tier Value against Pokemon in this category. Additionally you have a Boon to Skill Checks involving Pokemon in this category.

Practical Knowledge

Prerequisite: Field of Study, Expert Poke Edu Scene x2 - Reaction

Trigger: An Ally uses a 1-Target Attack against an Enemy Pokemon

Effect: Apply an Effect below to the Triggering attack. If the Triggering Ally or Enemy Pokemon is in your Field of Study Category, this may also be used as a Free Action or it doesn't expend the Feature's Frequency.

- » They can't apply Stat Evasion against it
- » They can't trigger Effects in response to it
- » It ignores Immunity and is treated as if its Type Effectiveness was Neutral (1.0x)

Living Pokedex

Prerequisite: Pokemon Researcher, Adept Poke Edu Static

Effect: Once per Round, you may use the Analyze Maneuver as a Free Action if it Targets a Pokemon. Whenever you use the Analyze Maneuver against a Pokemon, you and your Pokemon have a bonus to Accuracy and Evasion against them equal to your Tier Level until the end of the Round. This can only be gained once per Round.

Pokemon Generalist

Prerequisite: Pokemon Researcher, Master Poke Edu Static

Effect: When you gain this Feature, choose two other non-[Class] Features to gain that list Expert or lower Pokemon Education in their Prerequisite. You gain those Features despite not meeting its Prerequisites.

GM Note - Field of Study

The number of Pokemon within this Category should be more than 10, but less than 50. If it is a custom field of research, coordinate with your GM to determine which Pokemon would qualify. Be warned that the larger a category is, the more versatile the class is. Example categories could include Pokemon with Swimmer, Dragon Pokemon, Canine Pokemon or Fossil Pokemon. An even more specialized category could be Delta Pokemon or somniac Pokemon like Hypno, Musharna and Snorlax.

BATTLE SPECIALIST

While some Trainers specialize at commanding Pokemon, some are skilled in Pokemon Tactics.. Unlike Strategists, they know the full potential of a Pokemon and how to manipulate it to fit any situation. Their skilled usage of improvisation makes them a deadly adversary.

Battle Specialist

[Adv] [Class]

Prerequisite 1: Pokemon Researcher or Training Specialist [or]

Prerequisite 2: Adept Poke Edu or Combat

At-Will - Extended Action

Target: A Pokemon you have used a Training Downtime Action this Scene and an Attack they know

Effect: The Targeted Attack becomes their Signature Attack. Refer to the next page for details on how to create a Signature Attack. A Pokemon may only have one Attack learned this way at a time. The points budget for this Attack is equal to the number of Battle Specialist Features you have. If the Targeted Pokemon isn't owned by you, their points budget cannot exceed 2 points used.

Analytical Tactician

Prerequisite: Battle Specialist, Novice Poke Edu or Combat

Static

Effect: Your Pokemon gain an additional Attack Slot. Until you have 5 Battle Specialist Features, this Attack Slot can only have a Status Attack occupy it.

Battlefield Awareness

Prerequisite: Battle Specialist, Expert Poke Edu or Combat

At-Will - Special

Trigger: Any Action is declared

Target: An Ally within 5m

Effect: This Feature costs a Reaction to use, however if the Triggering Combatant is a Pokemon owned by you, it may also be used as a Movement Action or Swift Action. Until the end of the current Turn, the Target is immune to the Effects of one of the following:

» Flanked, Surrounded, Slow Terrain, Rough Terrain, Cover Terrain, Hazards

Reactive Tactics

Prerequisite: Battle Specialist, Adept Poke Edu or Combat

Scene - Reaction

Trigger: An Allied Pokemon within 3m would use a non-Signature Attack

Effect: You may alter the Triggering Attack as if it were Targeted by the Battle Specialist Feature. If the Triggering Attack misses all Targets (Unless you gave Smite or Spirit Surge) or the Triggering Pokemon is owned by you, the Frequency of this Feature isn't expended.

Personalized Training

Prerequisite: 3 Battle Specialist Features, Master Poke Edu or Combat

Static

Effect: Your Pokemon may have up to two Signature Attacks at a time.

Creating Signature Attacks

When you create a Signature Attack, first, choose an Attack the Pokemon knows to become the baseline. The chosen Attack will be overwritten with any of the following modifications, also applying to their Versatile Effect if relevant. Then, determine how many Points you have to modify the Attack and choose any number of effects below to alter it. An Effect can be purchased multiple times. Signature Attacks modifiers are considered to be the Natural attributes of that Attack.

.....

Type Shift (X Points)

For 1 Point, the Attack is changed to match one of the user's Types. For 3 Points, you may choose any Damaging Attack on their Tutor List and change it to that Type.

Category Shift (2 Points)

If the Attack is Special, it becomes Physical. If it is Physical, it becomes Special.

Frequency Shift (3 Points)

The Frequency is improved by one step. If it was EoT, it becomes At-Will. If it was Scene, it gains +1 usage.

Range Shift (3 Points)

Change the Range to any of the following or increase its existing AoE by +1. If the Targeted Attack is Status, you can only increase its aoe this way. Melee, 1 Target | 6, 1 Target | Burst 1 | 3, Ranged Blast 2 | Line 3

Accuracy Shift (1 Point)

The AC of the Attack is lowered by -1, but cannot be lower than AC 2.

Damage Shift (1 Point)

The DB of the Attack is increased by +1 but cannot exceed 4 plus double your Tier Level (Before STAB).

Effect Shift (X Points)

Add any Keyword below for its listed points cost. Your GM may also create custom effects for an appropriate points cost. > Drain (4), Friendly (3), Pass (3), Priority (2), Smite (2), Spirit Surge (3), Unstoppable (3)

Examples

» A Froslass uses Spectral Flame as a baseline and uses type Shift to change it to Ice Type, which is 1 Point since they're Iced Type. Their Points Budget was 4 so they ask the GM if they can have it become Chilled instead of Burned, which they deem to cost 3 Points. They rename this new Signature Attack "Spectral Chill".

» A Hydreigon uses Psychic Fangs as a baseline with a Points budget of 5. They category shift it to Special for 2 Points, They give it the Smite Keyword for 2. Then they lower it to 2 AC for 1 Point.

GENETICIST

Whether they're Pokemon Breeders, Evolutionary Researchers, Genetic Engineers or Variant Hunters, Geneticists have the ability to manipulate how their Pokemon level up. Their Pokemon always end up different somehow, whether with unique Attacks, Abilities or even Typing!

Geneticist

[Adv] [Class]

Prerequisite 1: Pokemon Researcher or Medicine Researcher **[or]**

Prerequisite 2: Adept Poke Edu or Med Edu

At-Will - Extended Action

Target: Two willing Pokemon

Effect: Choose one Target to become the Donor, the other being the Recipient. Choose an Effect granted by the Bonus of one of this Class's Features to apply to the Targets. Abilities or Attacks granted this way cannot be Signature, Innate or originally gained as a result of this Feature. Pokemon may only be the Recipient Target of this Feature once, or up to twice if owned by you. If a Pokemon not owned by you benefits from this Feature, they can no longer equip Items. Changes made through this Feature are not considered "Natural".

Bonus: When using the Geneticist Feature, you can choose an Attack that Donor knows that matches a Type of the Recipient. Add that Attack to the Recipient's corresponding Tutor List. If the Recipient's Type would change in the future, they lose any Attacks that no longer match.

Recessive Emergence

Prerequisite: Geneticist, Novice Poke Edu or Med Edu
Scene - Standard Action

Target: An Adjacent Allied Pokemon

Effect: The Target loses an Ability of your choice, then gains a non-Innate Ability they can learn. The Effects of this Feature are reverted at the end of the Scene.

Bonus: When using the Geneticist Feature, if the Donor and Recipient share at least one Type, you may choose an Ability the Donor knows. When the Recipient would learn an Ability through progression, they may choose to learn that one.

Mutated Genome

Prerequisite: Elemental Splicing, Expert Poke Edu or Med Edu

Scene x2 - Swift Action

Target: A Pokemon within 5m with a Type that was altered by the Geneticist Feature

Effect: One Attack or Pokemon Type altered this way is reverted to its original typing until the end of the Scene.

Elemental Splicing

Prerequisite: Geneticist, Adept Poke Edu or Med Edu
Scene x2 - Free Action

Target: An Adjacent Allied Pokemon

Effect: Choose Two Attacks on the Target's Attack List. Their Types are swapped until the end of the Scene.

Bonus: When using the Geneticist Feature, you can choose an Attack that the Recipient knows. The Type of the Attack is changed to match one of the Donor's Types, but it gains the Full Action Keyword, or Recoil 1/2 if it already has Full Action.

Adaptive Genetics

Prerequisite: Geneticist, Master Poke Edu or Med Edu
At-Will - Reaction

Trigger: An Allied Pokemon within 3m that is affected by Geneticist uses an Attack

Effect: The Triggering Attack's Type may be changed to match one of the user's Types. This is considered to be the Attack's Natural Type, ignoring rules.

Bonus: When using the Geneticist Feature, you can choose a Type that the Donor has. The Recipient can either gain that Type if they only had one, or replaces one of their existing Types with the chosen one.

Note - Signature Traits are Traits where only one species line naturally learns it, like Unanimous learned by Tandemouse

Class Note

You can generally transfer non mechanical traits at any time without counting towards this limit. This could be transferring the sparkiness of a flaafty onto the fur of an eevee. As a GM, if you enable this class, it should be done with heavy supervision to prevent overpowered combinations. Communicate with your players if you feel like a combination is too strong or you aren't confident with your intuition on balance. The class's purpose is to enable the creation of unique Variant Pokemon but of course, this comes with a high risk of imbalance outcomes, so it is completely fine to ban this class if desired. When enabling this class, you should also coordinate with your Player on how they fluff these mechanics, as some may not like what is essentially Pokemon eugenics even if it's fluffed as being a breeder.

TECH RESEARCHER

The powers that can be created from technology are practically limitless, and Trainers who pursue this line of research know this first hand. Tech Researchers specialize in creating inventions and gadgets that can help solve whatever problem they have at hand.

Tech Researcher

[Base] [Class]

Prerequisite: Novice Tech Edu

Static

Effect: Choose any Capability listed under the Innovative Gadgets Feature. You gain a custom Item with the [Trinket] Keyword that grants the chosen Capability. Others cannot benefit from this Item.

Example: Colress wears high tech glasses as a fluff item that grants him True Sight. He could also have a detection device that measures seismic activity, gaining the Tremorsense Capability.

Innovative Gadgets

[Ranked 3]

Rank 1 Prerequisites: Tech Researcher, Novice Tech Edu

Rank 2 Prerequisites: Tech Researcher, Expert Tech Edu

Rank 3 Prerequisites: Tech Researcher, Master Tech Edu
At-Will - Extended Action

Effect: This Feature may be activated when you perform a Crafting Downtime Action. You may craft Small or Large Gadgets. When created, you may assign them a Capability based on the Rank of Innovative Gadget you have or lower.

Rank 1 Gadgets: Alluring, Chilled, Climber, Darkvision, Gilled, Glow, Heater, Jumper, Magnetic, Naturewalk, Quick, Repulsive, Swimmer, Tracker

Rank 2 Gadgets: Blender, Dead Silent, Flier, Groundshaper, Illusionist, Mindlock, Reach, Telekinetic, Threaded, Tremorsense

Rank 3 Gadgets: Aura Reader, Blindsense, Empath, Invisibility, Phaser, Teleporter, Telepath, Thermal Vision, True Sight, X-Ray Vision

Utility Belt

Prerequisite: Innovative Gadgets Ranked 1, Adept Tech Edu
Bind 1 - Extended Action

Target: A [Large] Gadget Item in your Inventory

Effect: The Targeted Item is treated as being Equipped, despite being in an Inventory Slot.

Bonus: Large Gadgets only take one Inventory Slot, despite being Large. If you have at least 4 Tech Researcher Features, this Feature instead becomes Bind 2.

GM Note

As a GM, you may restrict capabilities listed from being created, adjust the TN to create it successfully, allow additional Capabilities to be granted or allow restrictions on usage. Some Capabilities such as Teleporter could be game changing so be wary with what you allow.

ARTIFICER

Artificers are Trainers who are fascinated by the phenomena of 'Type Shards' which are located underground. These shards harness the power of Elemental Types and can be harnessed by those with enough knowledge to be a great asset in battle and a tool of great versatility.

Artificer

[Advanced] [Class]

Prerequisite 1: Occult Researcher or Tech Researcher **[or]**

Prerequisite 2: Adept Occult Edu or Tech Edu

At-Will - Special

Effect: You create a Shard and add it to an open Inventory Slot. If used as a Swift Action, its color is chosen instead of randomized. If used as a Free Action, it is randomized as normal. Artificer may only be used once per Round.

Bonus: You gain the Artificing Kit and grant it the [Trinket] Keyword. During Crafting Downtime Actions you may create Type Augmentors, Type Boosters and Type Braces. Each Shard you have can be used as if they were 5 "Ingredient" Items for Artificer Recipes, however their associated Type must match the crafted Item.

Shard Types - Red (Fire, Fairy, Psychic), **Orange** (Normal, Fighting, Dragon), **Yellow** (Electric, Rock, Steel), **Green** (Bug, Grass, Ground), **Blue** (Flying, Ice, Water), **Violet** (Dark, Ghost, Poison)

Shard Versatility

Prerequisite: Artificer, Novice Occult Edu or Tech Edu
At-Will - Special

Trigger: An Ally within 3m would meet a Trigger Condition of a Shard

Effect: Expend a Shard of the corresponding Color and apply its Effect to the Triggering Ally. Shard Versatility is a Free Action but can also be used as a Reaction to double numerical values in the Shard's Effect.

Bonus: Your Shards gain additional Effects listed below:

- » If the holder would be hit by an Attack that corresponds to one of the Shard's Types, they gain Damage Reduction against it equal to your Tier Value
- » If the holder would use an Attack that corresponds to one of the Shards Types, they gain Accuracy for it equal to your Tier Level

Crystal Imbuement

Prerequisite: Artificer, 2 Artificer Features, Expert Occult Edu or Tech Edu
Scene x3 - Free Action

Trigger: You or an Ally within 5m uses an Attack

Effect: Expend a Shard from your Inventory, then select one of its associated Types. The Triggering Attack is treated as if it were the chosen Type. If the Triggering Combatant is holding a Type Augmentor, Type Booster or Type Brace, you may have it be treated as the associated Item's Type instead of expending a Shard.

Gem Flux

Prerequisite: Artificer, Adept Occult Edu or Tech Edu
At-Will - Swift Action

Target: You or an Adjacent Ally with an equipped Type Augmentor, Type Booster or Type Brace

Effect: Expend a Shard from your Inventory and choose one of its associated Types. The Targeted Item is treated as if it were that Type instead until the end of the Scene.

Bonus: You may treat the "Shard" Item as if it had the [Resource] Keyword.

Prismatic Power

Prerequisite: Artificer, 3 Artificer Features, Master Occult Edu or Tech Edu

Scene x2 - Standard Action

Trigger: A listed Trigger below occurs

Effect: Expend a Shard from your Inventory that corresponds to the Trigger, then apply its effect.

- » **Red** - When an Ally uses a Physical Attack it automatically hits and is one step more effective (Max 1.5x)
- » **Orange** - When an Ally is hit by a Physical Attack, it instead misses and they suffer no effects of the Attack.
- » **Yellow** - When an Ally is hit by an Attack and isn't Fainted, they restore 5 Ticks of Hit Points.
- » **Green** - When an Ally gains a Status Affliction, it is automatically cured.
- » **Blue** - When an Ally uses a Special Attack it automatically hits and is one step more effective (Max 1.5x)
- » **Violet** - When an Ally is hit by a Special Attack, it instead misses and they suffer no effects of the Attack.

JAILBREAKER

Pokeballs are the central piece of tech that is important to all Pokemon trainers regardless of their reason. Jailbreakers are the creators of these balls and not only them, they can modify them as weapons or augments to their own pokemon inside them.

Jailbreaker

[Advanced] [Class]

Prerequisite 1: Tech Researcher [or]

Prerequisite 2: Adept Poke Edu or Tech Edu

Bind X - Extended Action

Target: A Pokeball you or an Ally owns with a Captured Pokemon inside.

Effect: Assign a Pokeball Modification from the list below to the Target which applies to the captured Pokemon while this Feature is bound to it. A Target can only be affected by one Pokeball Modification at a time. X is equal to the higher of your Poke Edu or Tech Edu Rank.

Bonus: You gain the Ball Crafter Talent even if you do not qualify. If you already have the Ball Crafter Talent or gain it in the future, you may also craft the Protoball Item for \$100 per.

Pokeball Modifications are on the next page

Dense Steel

Prerequisite: Jailbreaker, Novice Poke Edu or Tech Edu
Static

Effect: Pokeballs in your Inventory gain the [Throwable] Keyword. When you use the Throw Maneuver this way, its Category is treated as Physical and if they're hit, perform an Athletics, Poke Edu or Tech Edu Check. They take Physical Normal Damage equal to the number of Successes multiplied by your Tier Value (They apply Damage Calculations as if it were an Attack)

Overloaded Components

Prerequisite: Dense Steel, Expert Poke Edu or Tech Edu
At-Will - Swift Action

Trigger: You use a Throw Maneuver by expending a Pokeball

Effect: The Triggering Attack gains the Smite Keyword. If the Attack hits, all Enemies within 1m of the Target also take damage as if they were hit but resist it by an additional damage step.

Bonus: When using the Throw Maneuver with a Pokeball, you may treat the Attack as if it was Electric Type instead of normal if desired.

Utility Balls

Prerequisite: Dense Steel, Adept Poke Edu or Tech Edu
Scene x2 - Swift Action

Trigger: You use a Throw Maneuver by expending a Pokeball

Effect: Apply one of the following effects:

» **Bounce Ball** - Choose an Enemy within 2m of the Target to also be Targeted by the Maneuver.

» **Flash Ball** - The Target and all Combatants within 1m become Blinded until the end of their next Turn on a hit, or have a penalty to their next Accuracy Roll equal to your Tier Level.

» **Gravity Ball** - Choose a Combatant within 5m of the Target. They must pass a Severe CR (4) Athletics Check or else be Slid into any unoccupied space adjacent to the Target.

» **Net Ball** - The Target becomes Slowed on a hit or loses -3 to their Movement Value until the end of their next Turn on a miss.

Homebrew Masterpiece

Prerequisite: Jailbreaker, 3 Jailbreaker Features, Master Poke Edu or Tech Edu
Scene x2 - Full Action

Target: A Pokemon whose associated Pokeball is bound by your Jailbreaker Feature

Effect: Apply the listed Effect that corresponds to the Pokeball Modification that the Target is affected by. A Pokemon can only be Targeted this way once per Scene.

Homebrew Masterpiece Effects are on the next page

Jailbreaker (Continued)

Pokeball Modifications

Targets a Pokemon and applies the modification while bound

Immunity Module

Effect: When this Modification is bound or as an Extended Action, choose a Status Affliction for the Pokemon to become Immune to.

Power Module

Effect: Once per Round if they were to have a Combat Stage increased, increase it by +1 more

Recovery Module

Effect: At the end of the Pokemon's Turn, they recover a Tick of Hit Points. They also have a bonus to Save Checks equal to your Tier Level.

Resistance Module

Effect: When this Modification is bound or as an Extended Action, choose a Type for the Pokemon to resist by an additional damage step.

Homebrew Masterpiece

Require a Full Action to use, Targeting the Pokemon bound by the associated Module and Jailbreaker Feature

Immunity Module

Effect: All Enemies within a Burst 1 Range of the Pokemon become inflicted with the chosen Status Affliction.

Power Module

Effect: Choose a Stat. The Pokemon has that stat set to +6 CS until the end of their next Turn. Afterwards, it returns to its former CS Value +1

Recovery Module

Effect: The Pokemon restores 5 Ticks of Hit Points and is cured of all Status Afflictions.

Resistance Module

Effect: The Pokemon may immediately use an Attack on their Battle Attack List that matches the chosen Type as a Free Action, however its range is changed to Burst 1.

PERFORMER

Performers excel with being the center of the stage, having drama and flair be their signature style. Regardless of your profession, Performers are great at controlling the field and dominating the audience with their battle or performance prowess.

Performer

[Base] [Class]

Prerequisite: Novice Performer Skill

At-Will - Special

Trigger: You or your Pokemon hit a Super Effective Attack, hit a Scene x1 Attack, use the Intercept Maneuver or use the Riposte Maneuver

Effect: Gain 1 Flair Token. This Feature is a Free Action when Triggered but may also be used as a Swift Action, ignoring the Trigger. If this is used as a Swift Action, instead gain 2 Flair Tokens.

Bonus: You may spend Flair Tokens up to your Tier Level to add an equal amount to You or Your Pokemon's Effect Range until the end of their next turn as an At-Will Free Action.

Note: Performer Skills are Acrobatics, Charm, Focus or Guile

Spectacle And Splendor

[Ranked 2]

Rank 1 Prerequisite: Performer, a Novice Performer Skill

Rank 2 Prerequisite: Performer, an Adept Performer Skill
Static

Effect: For each Rank, choose 2 Performer Techniques on the next page to learn. Some Performer Techniques cost Flair to use, specified below the technique.

Shock And Awe

Prerequisite: Performer, an Expert Performer Skill
Scene x2 - Free Action

Trigger: You or Your Pokemon Trigger the Performer Feature

Effect: Choose one of the following Effects to apply to all Enemies within 2m of the Triggering Combatant.

- » They become Provoked by the Triggering Combatant until the end of their next Turn.
- » They cannot use Reactions for the rest of the Round.
- » They cannot apply Evasion towards the next Attack that targets them

Grand Finale

Prerequisite: Performer, a Master Performer Skill
Scene - Reaction

Condition: It is at least Round 3

Trigger: You or Your Pokemon use an Attack

Effect: Choose two different Effects below to apply to the Triggering Attack. You may spend 2 Flair Tokens any number of times to choose an additional effect that is different from the first two chosen. After the Triggering Attack resolves, you lose all Flair Tokens, gain Ticks of Temporary Hit Points equal to the amount lost, and cannot gain Flair Tokens for the rest of the Scene.

- » Gains Sureshot Keyword.
- » Gains the Spirit Surge Keyword.
- » Gains the Unstoppable Keyword
- » Change from Physical to Special, or Special to Physical.
- » Automatically becomes a Critical Hit if it hits, but gains the Recoil 1/2 Keyword.
- » Choose an Affliction. On 15+, that Affliction is applied to the Attack's Targets.
- » The Target automatically fails their next Save Check.
- » The User gains +2 CS to a Stat of their choice.

Artist: Nagatukiariake2

Performer Techniques

Showmanship

Cost: X Flair Tokens

At Will - Free Action

Trigger: You or your Pokemon perform an Opposed Check in Combat

Effect: Add a 1d6 to the Triggering Roll for each Flair Token expended.

Bonus: You may also use this as a Swift Action to ignore the Trigger. If you do so, Target yourself or one of your Pokemon within 3m and they add the modifier to their next Skill Check used this Combat.

Drum Up Excitement

Cost: X Flair Tokens

At Will - Swift Action

Effect: All Allies within a Burst X Range gain one Tick of Temporary Hit Points and gain +1 CS in a Stat of their choice.

Coordinated Choreography

Cost: 1 Flair Token

At-Will - Free Action

Target: An Enemy within 5m

Effect: The Target becomes Marked by a Performer Mark until the end of this Initiative. You and the Ally acting alongside you this Initiative become Provoked by the Enemy with your Performer Mark, however your Attacks have the Smite and Spirit Surge Keyword against them.

Take Center Stage!

Cost: 1 Flair Token

At-Will - Free Action

Trigger: A Party passes Initiative

Target: A Combatant within 5m who hasn't Acted this Round yet

Effect: If the Target does not take their Turn the next time their Party gains Initiative, they become Suppressed. If the Target is an Ally and they do take their Turn the next time your Party has Initiative they gain a bonus to all d20's equal to your Tier Level until the end of their Turn..

Guaranteed Appeal

Cost: 2 Flair Tokens

At Will - Free Action

Trigger: You or Your Pokemon hit an Attack with an Effect Range

Effect: One Effect Range of the Triggering Attack automatically applies, regardless of the Accuracy Roll. A specific Attack can only Trigger this once per Scene.

Shift the Limelight

Cost: 1 Flair Token

At Will - Swift Action

Target: An Enemy Combatant within 5m.

Effect: During each ally's next Turn, they ignore Evasion on the Target and they gain a Boon to any Opposed Checks involving the Target.

Skilled Performer

Static

Effect: Choose two of the options below to gain. You may pick the same option multiple times. You may take this Technique up to two times.

» Gain the Skill Specialty Talent. The Specialty you pick must be related to your ability to perform.

» Choose a Skill to Rank Up if you meet the Level Prerequisites.

COORDINATOR

Performers that get into the contest scene follow the path of a Pokemon Coordinator! These Trainers specialize not in a specific type of Pokemon but more of an aesthetic that is central to their team. Whether its a group of cute pokemon or tough guys, its their style.

Coordinator

[Adv] [Class]

Prerequisite 1: Performer or Training Specialist **[or]**

Prerequisite 2: Adept Coordinator Skill

At-Will - Extended Action

Trigger: You use a Downtime Training Action on your Pokemon

Effect: Choose an Attack on each of your Trained Pokemon and choose an Innovation Technique that corresponds to your Coordinator Style and whose Prerequisites are met. Whenever they use that Attack as a Standard Action, they gain the benefits of that Technique. A Pokemon may only be affected by one Innovation Technique at a time.

Note: When you gain this Feature, choose a Coordinator Style. Coordinator Styles are **Beauty, Cool, Cute, Smart, Tough**. When you have 4 Coordinator Features, you may select another Style to gain. **Coordinator Skills** are Charm, Command or Poke Edu

Set the Stage

Prerequisite: Coordinator

Scene - Free Action

Trigger: The Scene Starts

Effect: A Coordinator Blessing enters the Field with 3 Activations. The Effect of your Coordinator Blessing depends on your corresponding Coordinator Styles. Multiple Activations can be expended towards a Trigger to apply the effect an additional time.

- » **Beauty** - This can be activated when using an Attack to increase its Effect Range by your Tier Level.
- » **Cool** - This can be activated when using an Attack to increase its Critical Hit Range by your Tier Level.
- » **Cute** - This can be activated when targeted by an Attack to increase your Evasion against it by double your Tier Level.
- » **Smart** - This can be activated when using an Attack to increase its Accuracy by your Tier Level
- » **Tough** - This can be activated when hit by an Attack to gain Damage Reduction against it equal to your Tier Value.

The Show Must Go On

Prerequisite: Set the Stage, Master Coordinator Skill

At-Will - Free Action

Trigger: An Allied Pokemon would use an Attack affected by an Innovation Technique

Effect: Add +1 Activation to your Coordinator Blessing. If your Blessing was removed, it returns to the Scene with 1 Activation.

Bonus: Your Pokemon may have up to two Attacks affected by an Innovation Technique at a time.

Performance Director

[Order]

Prerequisite: Coordinator, Adept Coordinator Skill

At-Will - Reaction

Trigger: An Ally within 5m uses an Attack that doesn't have an Innovation Technique applied to it

Effect: Choose an Innovation Technique that corresponds to your Coordinator Style to apply to the Triggering Attack. It must meet any listed Prerequisites.

Bonus: As an At-Will - Swift Action, you may Target an Ally within 5m and the next Attack they use can have an Innovation Technique that corresponds to your Coordinator Style applied to it. It must meet any listed Prerequisites.

Stylized Grooming

Prerequisite: Coordinator, Expert Coordinator Skill

At-Will - Extended Action

Trigger: You use a Downtime Training Action on your Pokemon

Effect: Choose an Ability below for each Pokemon to learn from the list of your associated coordinator Style(s). A Pokemon can only have one Ability from this Feature at a time.

- » **Beauty** - Beautiful, Pride, Regal Challenge
- » **Cool** - Combo Striker, Courage, Reckless
- » **Cute** - Coward, Cute Charm, Gentle Vibe
- » **Smart** - Analytic, Dodge, Forewarn
- » **Tough** - Absorb Force, Intimidate, Unnerve

Innovation Techniques

Beauty Techniques

Captivating Strike

Prerequisite: This Attack is 1-Target

Effect: After the Attack's Resolution, the Target becomes Provoked or Entranced by the User. An Enemy can only gain an Affliction this way once per Scene.

Elegant Perfection

Prerequisite: None

Effect: If all Targets of this Attack have a Mental Affliction or are Provoked by you, this Attack gains the Sureshot Keyword.

Stunning Serenity

Prerequisite: This Attack has an Effect Range

Effect: This Attack cannot Critical Hit. This Attack gains the Spirit Surge Keyword and if it hits, the Effect Range automatically triggers.

Cute Techniques

Adorable Aura

Prerequisite: This is a Status Attack

Effect: The user cannot be Targeted by 1-Target Attacks until the start of their next Turn unless there are no other legal targets.

Dazzling Strike

Prerequisite: This Attack is 1-Target

Effect: After the Attack's Resolution, the Target becomes Dazed or Entranced by the User. An Enemy can only gain an Affliction this way once per Scene.

Inspiring Performance

Prerequisite: None

Effect: After this Attack's resolution, choose an Ally within 2m of the User to gain a Modifier to their next Accuracy Roll or Save Check of your choice equal to your Tier Level.

Cool Techniques

Awesome Strike

Prerequisite: This Attack is Damaging

Effect: The Attack gains the Smite Keyword and has a Critical Hit Modifier equal to your Tier Level.

Flashy Performance

Prerequisite: None

Effect: This Attack has a 14+ Effect Range to increase a Stat of your choice by +1 CS.

Ricochet Maneuver

Prerequisite: This Attack is 1-Target

Effect: Choose an additional Enemy to become a Target of this Attack within 2m of the first Target.

Smart Techniques

Analyzed Strike

Prerequisite: None

Effect: If a Target of this Attack is Flanked, this gains the Sureshot Keyword.

Distracting Tactic

Prerequisite: None

Effect: After this Attack resolves, the user may use a Manipulate or Tactic Maneuver against one Target of the Attack as a Free Action (Other than attack of opportunity or throw). If the Attack missed, the Maneuver automatically hits.

Tactical Shot

Prerequisite: This Attack is Damaging

Effect: This Attack is resisted one less damage step and gains the Unstoppable Keyword.

Innovation Techniques

Tough Techniques

Armor Up

Prerequisite: This is a Status Attack

Effect: After this Attack is used, the user gains Damage Reduction equal to their Trainer's Tier Value against the next Attack that hits them. If it was used as a non-Standard Action, they instead gain half the amount (Rounded Up)

Resilient Strike

Prerequisite: This is a non At-Will Damaging Attack

Effect: The Targeted Attack becomes a Full Action. If the Attack is Physical, its Offensive Stat becomes Defense. If the Attack is Special, its Offensive Stat becomes Special Defense.

Stylish Stamina

Prerequisite: None

Effect: After the Attack's Resolution, the user gains a Tick of Temporary Hit Points. If it was a Status Attack used as a Standard Action, they instead gain two.

DAREDEVIL

Trainers who like to live on the edge follow the path of a daredevil. Performers that thrive off adrenaline and seek risks can't see any other lifestyle than one on the edge. Daredevils excel at putting themselves in danger for big rewards or big losses.

Daredevil

[Adv] [Class]

Prerequisite 1: Fighter or Performer **[or]**

Prerequisite 2: Adept Combat or Intuition

At-Will - Free or Extended Action

Trigger: You perform a non-Education Skill Check

Effect: Add 2d6 to the Skill Check. If you don't exceed the required Successes by at least 1, it is treated as a Critical Failure instead. If the Triggering Skill Check is for a non-Questing Downtime Action, roll a Luck Check instead and on a 15 or less, you suffer a minor setback regardless of the result. If it was 5 or less, it is instead a major setback.

Bonus: You may gain Adrenaline Tokens as a result of your Actions.

Combat Instincts

Prerequisite: Daredevil

Static

Effect: Choose two Attacks to learn from the list below. When you have 4 Daredevil Features, choose two more to learn.

» Adrenaline Rush, Bulk Up, Concentration, Counter, Detect, Endure, Focus Energy, Protect, Quick Guard, Wide Guard

Adrenaline Boost

Prerequisite: Daredevil, Expert Combat or Intuition

Scene - Reaction

Trigger: You fall below 50% Hit Points or suffer a Critical Failure for a Skill Check in Combat

Effect: You gain X Ticks of Temporary Hit Points and gain +X Combat Stages in a Stat of your Choice. X is 1 but you may expend up to two Adrenaline Tokens to increase it by +1 per Token.

Thrill Seeker

Prerequisite: Daredevil, Adept Combat or Intuition

Static

Effect: Choose a Daredevil Style below and gain one of its corresponding Abilities

» **Gambler:** Defy Death or Super Luck

» **Masochist:** Absorb Force or Bulletproof

» **Reckless:** Courage or Reckless

» **Sacrificial :** Bodyguard or Friend Guard

Deadly Gambit

Prerequisite: Daredevil, Master Combat or Intuition

Scene x3 - Free Action

Trigger: You use an Attack or are Targeted by an Attack

Effect: The Triggering Combatant performs a Luck Check. On a 10 or below, the Attack Misses. On an 11 or above, the Attack becomes a Critical Hit which cannot be prevented or avoided by any means. You may use Adrenaline Tokens to grant a 1d4 penalty to their Luck Check if desired. If the usage of this feature leads you to miss an attack or an enemy landing a critical hit, you gain an Adrenaline Token

Mechanic - Adrenaline Tokens

Adrenaline Tokens are gained whenever you perform an action deemed risky by the GM. After the check is performed you gain 1 Adrenaline Token, or 2 if the result was negative. Actions are not deemed risky unless there is a decent chance of failure, have a penalty attached, or have a degree of uncertainty of its results. Adrenaline Tokens may be expended to add a d6 to any non-Education Skill Check, Accuracy Check, Luck Check or Save Check for each token expended. No more than 2 Tokens may be spent on a singular usage. You can only have a Maximum of 6 Adrenaline Tokens at a time.

Example- A Daredevil that Intercepts an Attack from a Minion or resisted Attack is not reckless. Intercepting an Attack that's strong or a Critical Hit would grant a Token.

Example- A Daredevil uses an explosive device to trigger an explosion on an oil barrel. He doesn't know the extent of what could happen, this would grant a Token.

IMPOSTER

Performers that are masters of disguise and conmen tend to follow the path of an Imposter. Masters of the Masquerade, Imposter specialize in wearing disguises, having multiple identities and even copying attacks used by their enemies and allies supernaturally.

Imposter

[Adv] [Class]

Prerequisite 1: Performer or Provocateur [or]

Prerequisite 2: Adept Guile or Stealth

Static

Effect: You gain the Makeshift Artisan Talent. You may craft [Small] and [Large] Disguises. You learn the Copycat Attack.

Sly Mimicry

Prerequisite: Imposter, Adept Guile or Stealth
At-Will - Swift Action

Target: A Combatant within 5m

Effect: Choose an Attack that the Target has used in this Scene. This Attack is added to your Attack list until the end of the Scene or until you use this Feature again. The Frequency of Attacks carries over even if replaced.

Bonus: Whenever you use Damaging Attacks that you didn't start the Scene with on your Attack List, they may be treated as either Physical or Special Category of your choice.

Art of Deception

[Ranked 3]

Rank 1 Prerequisite: Imposter

Rank 2 Prerequisite: Imposter, Expert Guile or Stealth

Rank 3 Prerequisite: Imposter, Master Guile or Stealth

Static

Effect: Choose two Imposter Techniques to gain from the list on the next page.

Imposter Techniques

Donned Disguise

Bind 1 - Extended Action

Target: A [Small] Disguise you own

Effect: While bound to this Feature, the Target Item gains the [Trinket] Keyword. When you have 4 Imposter Features you may instead Target a [Large] Disguise you own.

Voice Training

Static

Effect: As a TN 15 Downtime Research Action (Uses Guile or Stealth for the default skill), you may permanently learn to mimic the voice of any specific Pokemon or Person you have heard. With a CR 4 Guile or Stealth Check, you may learn to mimic a voice until the end of a Scene, not needing a Downtime Action. Enemies have no reason to suspect that your mimic'd voice is unauthentic, if successful.

Armored Apparel

Bind 1 - Extended Action

Target: A Disguise you own; An [Armor] Item of the same size

Effect: While this Technique is bound, the Targeted Disguise Item also has the Effect of the Targeted [Armor] Item.

Costume Change

Scene x2 - Free Action

Target: Yourself or an Adjacent Ally

Effect: The Target may unequip any number of Items in their Equipment Slot and add them to their or your Inventory. The Target may then equip any number of non-Weapon Items from their Inventory or yours

Memorized Tactics

Bind 2 - Extended Action

Trigger: You perform a Training Downtime Action on yourself

Target: A Willing Ally

Effect: Choose up to two At-Will or EOT Attacks that the Target knows and add them to your Attack list or swap them out with any Bound Attacks you learned this way previously. You may only have up to 2 Attacks learned this way on your Attack List at a time.

Illusory Tactics

Static

Effect: You learn the Double Team Attack. Whenever you use its Versatile Effect, the Frequency is ignored and not expended.

I'm You But Better

At-Will - Reaction

Trigger: An Enemy Targets you with an Attack

Effect: The Triggering Attack is added to your Attack list until the end of the Scene.

Bonus: Whenever you add an Attack to your Attack List, you may mark the source with a Mimic Mark. Whenever you Attack an Enemy with a Mimic Mark with an Attack you gained from them, they cannot apply Evasion against it.

DEFENDER

The classic tank characters should look towards being a Defender when picking a class, as it provides many generic defensive tools that Trainers could benefit from such as better intercepting, better defending and being better at making enemies attack you over allies.

Defender

[Base] [Class]

Prerequisite: Novice Athletics or Combat

Static

Effect: When using the Defend Maneuver, you may Target any number of Adjacent Allies to benefit from its Effect. You may learn two Attacks from the Defensive Combat Feature's Novice Attack List.

Note -: Defensive Combat's Novice Attack List is:
» Block, Harden, Quick Guard, Taunt, Withdraw

Draw Aggro

Prerequisite: Defender, Novice Athletics or Combat Static

Effect: Whenever you use the Provoke Maneuver, you may also use it as if its Range were "All Adjacent Enemies". Whenever you Provoke an Enemy, it is treated as a Mental Affliction instead of a Condition and must be cured, removing any listed time durations.

Defensive Tactics

Prerequisite: Defender, 2 Defender Features, Expert Athletics or Combat Static

Effect: Choose a listed Defensive Tactic to gain its associated Ability in the parenthesis.

» **Armored** (Battle Armor), **Bulky** (Absorb Force), **Guardian** (Friend Guard), **Protective** (Bodyguard), **Stoic** (Stoicism)

Instinctive Defense

Prerequisite: Defender, Adept Athletics or Combat Static

Effect: You gain the Durable Protector General Feature. You may use the Intercept Maneuver as if it was a Swift Action or Reaction.

Impenetrable Fortress

Prerequisite: Defender, 3 Defender Features, Master Athletics or Combat

Scene - Standard Action

Effect: You gain a Fortified Coat. While you're affected by a Fortified Coat, you resist the next two Damaging Attacks you're hit by for an additional damage step. The Fortified Coat is expended after Damage Resolution when you're hit by a second Damaging Attack since gaining this Coat.

Artist: @Magik_Jack_Art

BULWARK

Defenders that are a master at field control end up as a Bulwark. Bulwark trainers specialize in crowd control, being able to provoke and trap enemies and manipulate the field by creating obstructions that can be used to block attacks or mitigate damage.

Bulwark

[Advanced] [Class]

Prerequisite 1: Defender **[or]**

Prerequisite 2: Adept Athletics or Focus

At-Will - Standard Action

Effect: You create Large Blocking or Cover Terrain in up to 3 unoccupied adjacent spaces. Terrain Created this way is also [Fragile & Breakable]. Whenever you or an Ally are adjacent to this Terrain, they have Damage Reduction equal to your Tier Value (This does not stack with itself). If you have 4 Bulwark Features you may use this as a Swift or Movement Action as well, but only choose 1 unoccupied adjacent space instead.

Crowd Control

Prerequisite: Bulwark, Novice Athletics or Focus
At-Will - Special

Target: An Enemy within 3m or all Adjacent Enemies

Effect: If this is used as a Swift Action, apply one of the following to the Target(s). If this is used as a Standard Action, instead apply all of the following.

- » They are Provoked by you until the end of their next Turn.
- » They are Trapped by you until the end of the next Round.
- » You resist the next Damaging Attack from all Targets by an additional damage step until the end of the next Round.

Fortified Rampart

Prerequisite: Bulwark, 2 Bulwark Features, Expert Athletics or Focus
Scene - Special

Trigger: An Ally adjacent to Blocking or Cover Terrain you created would be hit by an Attacker who isn't adjacent to them

Target: A Blocking or Cover Terrain you created that is Adjacent to the Triggering Ally

Effect: The Ally is instead not hit by the Triggering Attack, nor do they take damage or are affected by its Effects. The Targeted Terrain is then destroyed. This Feature may be used as a Standard Action or Reaction. If used as a Standard Action, its Frequency is not expended.

Stalwart Bastion

Prerequisite: Bulwark, Adept Athletics or Focus
Static

Effect: You gain 5 Damage Reduction. When you reach Tier 2+, this is increased to 10 Damage Reduction. While an Ally is adjacent to you, they also have this Damage Reduction. Your [Equipment - Armor] Items cannot be affected by the Disarm Maneuver.

Steelclad Fortress

Prerequisite: Bulwark, 3 Bulwark Features, Master Athletics or Focus

Scene x2 - Free Action

Trigger: You or an Adjacent Ally would be hit by a Damaging Attack

Effect: When calculating the damage of the Triggering Attack, you and all allied Combatants that were hit are considered to be Steel Type for the sake of calculating Weaknesses and Resistances.

JUGGERNAUT

Defensive Trainers that refuse to faint are often known as Juggernauts, sometimes lovingly referred to as Behemoths. Juggernauts excel in having a massive durable body that can withstand a lot of damage and recover from anything thrown at them.

Juggernaut

[Advanced] [Class]

Prerequisite 1: Defender [or]

Prerequisite 2: Adept Athletics or Combat Static

Effect: You gain +5 Stat Points in HP. When you have 3 Juggernaut Features, you gain an additional +5. When you have 5 Juggernaut Features, you gain an additional +10. Stat Points gained this way go in the Extras Column. You start the Scene with a Tick of Temporary Hit Points.

Built Different

Prerequisite: Juggernaut, Novice Athletics or Combat Static

Effect: Allies that are Adjacent to you treat you as if you were Cover Terrain and Enemies cannot pass through spaces you're occupying. The User may shift through Spaces occupied by Enemies as if they were Basic Terrain but cannot occupy their space at the end of their Movement. If you are Targeted by a Line Attack, its Range stops at you and it cannot exceed to any further space.

Cover Terrain - If a Ranged Attack would Target a Combatant adjacent to Cover Terrain it is resisted by an additional damage step unless the Attacker is either Adjacent to the Target or this Cover Terrain. Cover Terrain must have a size designated and can only provide cover to Combatants of equal or smaller size, such as a Bush not providing cover for a Rhydon.

Resilient Recovery

Prerequisite: Juggernaut, 2 Juggernaut Features, Expert Athletics or Combat At-Will - Swift Action or Reaction

Trigger: You start your Turn or are hit by an Attack

Effect: You gain a Tick of Temporary Hit Points. If the Trigger was being hit by an Attack, this occurs after the Triggering Attack resolves.

Overwhelming Might

Prerequisite: Juggernaut, Adept Athletics or Combat At-Will - Swift Action

Trigger: You hit with a Melee Attack

Effect: You may use your Adjusted HP Stat Total (not Hit Points) as an Offensive Stat when calculating the Damage Roll for this Attack or add your Tick Value as a Damage Bonus instead.

Indomitable Body

Prerequisite: Juggernaut, 3 Juggernaut Features, Master Athletics or Combat Scene - Special

Effect: As a Swift Action, choose one of the Effects to apply. As a Full Action, all are applied.

» You are cured of a Physical Affliction

» You restore three Ticks of Hit Points

» You gain two Ticks of Temporary Hit Points

Bonus: Once per Scene, when you fall below 25% Hit Points, the Frequency of this Feature is refreshed.

SENTINEL

Defenders that don't seek to just be tanky for themselves, end up following the path of a Sentinel. These Trainers are much more self-sacrificing and built to protect others and deal back revenge when their allies are harmed, often using defense as their strength.

Sentinel

[Advanced] [Class]

Prerequisite 1: Defender **[or]**

Prerequisite 2: Adept Combat or Command
At-Will - Free Action

Trigger: You use Damaging Attack against an Enemy that is Provoked by you or an Attack of Opportunity

Effect: If the Triggering Attack is Physical, you use your Defense as the Offensive Stat instead of Attack. If the Triggering Attack is Special, you use your Special Defense as the Offensive Stat instead of Special Attack.

Bonus: When your Attack of Opportunity is Triggered, you may use a Swift Action or a Reaction to use it. An Enemy can only Trigger your Attack of Opportunity once per Round.

Stand Behind Me

Prerequisite: Sentinel, Novice Combat or Command Static

Effect: Whenever you use the Defend Maneuver, the Targets resist Blast and Line Attacks by an additional Damage Step while they're adjacent to you for this duration. Whenever an Adjacent Ally under the Effect of your Defend Maneuver would move, you may slide into a space that is Adjacent to them. This cannot let you move more spaces than your Movement Value.

Retaliating Force

Prerequisite: Sentinel, 2 Sentinel Features, Expert Combat or Command
Scene x2 - Free Action

Trigger: You Intercept an Attack or an Adjacent Enemy Targets an Ally with an Attack

Effect: After the Trigger resolves, you may use an At-Will Attack as a Free Action, with the Triggering Enemy being the only Target, provided they're in range, however it is resisted by an additional step. This is treated as an Attack of Opportunity for the sake of the Sentinel Feature. At Tier 3, you may instead choose an At-Will or EOT Attack.

Get Down!

Prerequisite: Sentinel, Adept Combat or Command
Scene - Free Action

Trigger: You Intercept for an Ally and they would still be hit by the Intercepting Area of Effect Attack

Effect: The Ally you Intercepted for is slid up to 3m instead of into an Adjacent Space. If they slide into a Space that isn't in the original range of the Attack, it misses them instead of dealing damage as if they resisted it by an additional damage step.

Sacrificial Heart

Prerequisite: Sentinel, 3 Sentinel Features, Master Combat or Command
Scene x2 - Free Action

Trigger: An Ally within 2m is Attacked

Effect: You may use the Intercept Maneuver against the Triggering Attack as a Free Action.

Bonus: You learn the Endure Attack

FIGHTER

Fighters are trainers that have basic martial combat knowledge in close range quarters. Whether with weapons or with fists, fighters excel at fighting others and even standing up to other Pokemon with only their strength to use against them.

Fighter

[Base] [Class]

Prerequisite: Novice Athletics or Combat

At-Will - Extended Action

Effect: Choose a Stat to become your Trained Stat (You can only have one at a time). Your Trained Stat has their Default CS Value set to +1. If you chose HP, you instead start the Scene with 2 Ticks of Temporary Hit Points.

Bonus: You may learn two Attacks from the Martial Combat Feature's Novice Attack List.

Note- Martial Combat's Novice Attack List is Bulk Up, Concentration, Double Kick, Low Sweep, Mach Punch, Meditate, Power-Up Punch

Close Combat

Prerequisite: Fighter, Novice Athletics or Combat
Scene x2 - Free Action

Trigger: You use a Melee Attack

Effect: The Triggering Attack is treated as having no effect, but apply one of the following:

» After the Attack's Resolution, you may perform one of the following Maneuvers against the Target using a Reaction. The Maneuver automatically hits but still needs an opposed check if necessary: Trip, Push, Hinder, Disarm, Distract or Provoke.

» This Attack ignores the Physical Evasion of all Targets.

» After the Attack's Resolution, the Target loses -2 CS in Defense or Special Defense.

Martial Style

Prerequisite: Fighter, 2 Fighter Features, Expert Athletics or Combat
Static

Effect: Choose a listed Martial Style to gain its associated Ability in the parenthesis.

» **Agile** (Vanguard), **Brutal** (Huge Power),

Guarded (Absorb Force), **Nimble** (Combo Striker),

Ruthless (Vicious)

Martial Prowess

Prerequisite: Fighter, Adept Athletics or Combat
Scene x2 - Free Action

Trigger: You would use a Riposte or Tactic Maneuver

Effect: Choose one effect to apply.

» The Triggering Maneuver automatically hits the Target.

» All Targets of the Triggering Maneuver fail their opposed check.

Bonus: Once per Round you may use any Tactic Maneuver (Other than Throw) as if it were a Free Action, but you must expend 1 SP to do so. (It still must be Triggered)

Combat Momentum

Prerequisite: Fighter, 3 Fighter Features, Master Athletics or Combat

At-Will - Free Action

Trigger: You roll a natural 15+ on a Melee Attack or cause an Enemy to faint with a Melee Attack

Effect: After the Trigger resolves, choose one of the following effects to apply:

» You gain +1 CS in your Trained Stat (1 Tick of Temporary HP if it's HP)

» Your next Melee Attack ignores Stat Evasion

» You gain an additional Movement Action. For the rest of your Turn, Movement does not trigger Attacks of Opportunity.

Bonus: Your Trained Stat's Default CS Value is increased by +1 or you start the scene with 3 Ticks of Temporary Hit Points if it is HP.

BERSERKER

Fueled by fury and rage, Berserkers are fighters that are full blown fighters. These Trainers can specialize in their rage to ramp up in power, fight past their limits or deal insane damage. In addition they can build up fury and pain in order to recover or deal even more damage.

Berserker

[Advanced] [Class]

Prerequisite 1: Fighter [or]

Prerequisite 2: Adept Combat and Novice Intimidate

At-Will - Free Action

Trigger: You're hit with an Attack or hit a Damaging Attack

Effect: After the Triggering Attack resolves, you gain a Fury Counter (Max 6).

Bonus: For each Fury Counter you have, your Critical Hit Range is increased by +1. Whenever you land a Critical Hit, all Fury Counters are expended. You learn the Rage Attack.

Reckless Strike

Prerequisite: Berserker, Novice Combat or Intimidate
At-Will - Free Action

Trigger: You miss a Melee Attack

Effect: You may perform the Accuracy Roll again. You cannot use anything requiring a Reaction until the start of your next Turn.

Bonus: While Enraged, your Actions are not restricted by the Affliction's Effects

Embodiment of Rage

Prerequisite: Berserker, 2 Berserker Features, Expert Combat or Intimidate
Static

Effect: You cannot become Provoked as a result of the Enraged Affliction. In addition, choose a listed Rage Style to gain its associated Ability in the parenthesis.

» **Enduring** (Enduring Rage), **Feral** (Berserk), **Wrathful** (Anger Point).

Power from Pain

Prerequisite: Berserker, Adept Combat or Intimidate
Static

Effect: While Enraged or Provoked, your Damaging Attacks have their Damage Base increased by +X for every two Ticks of Hit Points you're missing. X is equal to your Tier Level.

Example: If your Tick value is 10 and you're at 70 Hit Points out of 100, you're missing three Ticks. If you use a DB 6 Attack, this increases it by +2 (If you're Tier 2)

Fueled by Fury

Prerequisite: Berserker, 3 Berserker Features, Master Combat or Intimidate

Scene x2 - Swift Action

Effect: You may expend any number of Fury Counters. You then gain X Ticks of Temporary Hit Points, where X is the number of Counters expended.

Bonus: Whenever you're hit by a Critical Hit, you may expend 3 Fury Counters to treat it as a normal hit instead.

GLADIATOR

Trainers that follow the path of the Gladiator live for the glory of battle. They're not simply street brawlers but they're more entertainers and win a fight in style. Through the Glory mechanic, Gladiators can ramp up their power in a Scene based on their performance.

Gladiator

[Advanced] [Class]

Prerequisite 1: Fighter **[or]**

Prerequisite 2: Adept Combat and Novice Charm or Command At-Will - Free Action

Trigger: You Provoke an Enemy, land a Critical hit, an Attack misses you, or you or your Pokemon cause an Enemy to faint

Effect: You gain +1 Glory Counter. For each Glory Counter you have, you have a +1 Modifier to Accuracy for Melee Attacks. Whenever your Pokemon Faint, you lose half of your Glory Counters (Rounded Down). You cannot have more Glory Counters than double your Tier Level.

Bonus: You learn the Taunt Attack.

Rising Glory

Prerequisite: Gladiator, Novice Combat, Novice Charm or Command Static

Effect: You gain the following benefits while you don't have a Mental Affliction:

- » You have a +5 Bonus to Damage Rolls multiplied by your current Glory Counters. At Tier 3, this changes to a +10 bonus.
- » You have 5 Damage Reduction multiplied by your Glory Counters against Attacks derived from Enemies that are Provoked by you.
- » You have a +1 bonus to Evasion against Enemies Provoked by you multiplied by your current Glory Counters.

Flaunting Glory

Prerequisite: Gladiator, 2 Gladiator Features, Expert Combat, Adept Charm or Command Scene x2 - Swift Action

Effect: You may expend up to 2 Glory Counters and choose an effect below to apply for each Counter expended. (They can be the same Effect)

- » Choose an Enemy within 5m to become Provoked by you for a until the end of their next Turn. This cannot Trigger the Gladiator Feature.
- » Gain +1 CS in a Stat of your choice.
- » An Enemy within 5m that has a Mental Affliction suffers a -3 to their next Save Check.

Calling all Challengers

Prerequisite: Gladiator, Adept Combat, Novice Charm or Command Static

Effect: You learn the Regal Challenge Ability. If you Provoke at least 3 Combatants through this Ability, you instead gain +2 Glory Counters if you Triggered Gladiator through it. You may use Taunt through the Versatile Keyword even if you use a Damaging Attack during your Turn and can use a Damaging Attack even if you used Taunt through the Versatile Keyword this Turn.

Star of the Show

Prerequisite: Gladiator, 3 Gladiator Features, Master Combat, Adept Charm or Command Scene x2 - Free Action

Trigger: You hit, or are hit by, an Enemy who's Provoked by you

Effect: If the Trigger was being hit by a Provoked Enemy, you resist the Triggering Attack by an additional Damage Step. If the Trigger was hitting a Provoked Enemy, the Attack becomes a Critical Hit. An Enemy can only be affected by Star of the Show once per Scene.

MONK

While other Fighter classes are usually solely offensive, Monk Trainers focus on durability and versatility. When they desire, they can empower themselves to have brutal strikes or stunning strikes, but they can also have a mastery of body and mind, having sustainability.

Monk

[Advanced] [Class]

Prerequisite 1: Fighter **[or]**

Prerequisite 2: Adept Combat and Novice Athletics

At-Will - Free Action

Trigger: You start your Turn

Effect: Choose a Stance below to enter. You benefit from the Stance's effects until you enter a new stance or the Scene ends.

» **Ferocious Stance** - You have a bonus to the Damage Rolls for Melee Attacks equal to your Tier Value.

» **Defensive Stance** - You have Damage Reduction against Physical Attacks equal to your Tier Value

» **Flowing Stance** - Your Movement Value is increased by +3 and you do not provoke Attacks of Opportunity by moving.

» **Meditative Stance** - You have a bonus to Save Checks and Evasion equal to your Tier Level.

○ Flurry of Blows

Prerequisite: Monk, Novice Combat or Athletics
At-Will - Swift Action

Trigger: You miss a Melee Attack

Effect: You perform the Accuracy Roll again. If the Attack hits, it is resisted by an additional damage step, cannot be a Critical Hit and cannot trigger Effect Ranges. If you have at least 4 Monk Features and the rerolled Attack misses, you may roll it once more.

○ Stunning Strike

Prerequisite: Monk, 2 Monk Features, Expert Combat or Athletics

Scene x2 - Swift Action

Trigger: You roll a Natural 15+ on a Damaging Melee Attack against a Single Enemy

Effect: The Effect of the Triggering Attack is ignored. If it was a Critical Hit, it is no longer a Critical Hit. Choose one of the following Effects to apply to the Target. A Target can only be affected by Stunning Strike once per Scene.

- » They become Paralyzed
- » They become Dazed
- » They become Weakened until the end of their next Turn
- » They become Vulnerable until the end of the Round

○ Purity of Body & Mind

Prerequisite: Monk, Adept Combat or Athletics
Static

Effect: Upon gaining this Feature, choose Body or Mind. If you choose Body, while you're affected by a Physical Status Affliction, you may perform Save Checks twice, taking the higher result. If you choose Mind, while you're affected by a Mental Status Affliction, you may perform Save Checks twice, taking the higher result. If you have 5 Monk Features, you benefit from both instead.

○ Damage Deflection

Prerequisite: Monk, 3 Monk Features, Master Combat or Athletics

Scene x2 - Reaction

Trigger: You're hit by a Damaging Attack

Effect: Choose one of the Effects below to apply. Each effect may only be applied once per Scene:

- » You resist it by an additional Damage Step. Then your next Damaging Attack gains the Smite Keyword.
- » You resist it by an additional Damage Step. An Enemy within 2m is also hit by the Triggering Attack but resists it by an additional Damage Step.
- » If the Triggering Attack wasn't from an Adjacent Enemy, it misses instead.

MYSTIC

Compared to Occult Researchers, some Trainers have innate mystical abilities. While Fighters are pros at all things physical, Mystics are on the opposite side, mastering everything special and magical. The specialty of Mystics lay in their Mystic Techniques, altering their attacks.

Mystic

[Base] [Class]

Prerequisite: Novice Occult Edu or Focus

Static

Effect: You learn two Basic Weapon Attacks with the Requirement of [Arcane] Only or two Attacks from the Psionic Combat Features' Novice Attack List or one Attack from each list. When you have 4 Mystic Features, you learn two more from the Advanced Weapon list with the same requirement or from the Psionic Combat Features Expert Attack List. Weapon Attacks learned this way can be used through a qualifying Weapon as if it was granted through them or as if the Weapon Range was 6 and usable without a Weapon.

Arcane Alteration

Prerequisite: Mystic, Novice Occult Edu or Focus
Scene x3 - Swift Action

Trigger: You use a Special Attack

Effect: Apply a Mystic Technique to the Triggering Attack.

Note: Amplified Sorcery is the only Technique that can be applied to an Attack and stack its effects with itself. Other Techniques do not stack.

Mystical Style

Prerequisite: Mystic, 2 Mystic Features, Expert Occult Edu or Focus
Static

Effect: Choose a Mystical Style to gain its associated Ability in parenthesis.

» **Archaic** (Sorcery), **Overflowing** (Magical Surge),
Tactical (Mental Force), **Warding** (Magic Guard),
Willpower (Mysticism)

Channeled Mysticism

Prerequisite: Arcane Alteration, Adept Occult Edu or Focus
At-Will - Reaction

Trigger: An Ally within 3m uses a Special Attack

Effect: Apply a Mystic Technique to the Triggering Attack.

Magical Mastery

Prerequisite: Arcane Alteration, Master Occult Edu or Focus
Bind 2 - Extended Action

Target: A Special Attack you know and a Mystic Technique

Effect: While the Targeted Attack is bound by this Feature, they may choose to apply the targeted Mystic Technique as a At-Will - Free Action whenever it is used.

Mystic Attack Reference

Basic Arcane Weapon Attacks - Arcane Fury, Bane, Energy Blast, Healing Aura, Rending Spell, Resonance Beam

Advanced Arcane Weapon Attacks - Empowerment, Missile Shot, Magical Burst, Mirror Coat, Mystic Ward, Shield

Psionic Combat Novice Attacks - Calm Mind, Cosmic Power, Light Screen, Reflect, Safeguard

Psionic Combat Expert Attacks - Barrier, Imprison, Heal Pulse, Hypnosis, Kinesis, Mirror Coat

MYSTIC TECHNIQUES

Amplified Sorcery

Effect: The Attack's area of Effect is increased by +1. If it is 1-Target, it instead becomes Ranged Blast 2.

Berserk Blast

Effect: The Triggering Attack has a bonus to Critical Hit Ranges equal to your Tier Level but its Effect Ranges are ignored.

Channeled Element

Effect: Choose an adjacent willing Pokemon and one of their Types. The Triggering Attack is treated as that Type instead. The chosen Pokemon cannot apply Evasion against the next Attack that Targets them.

Controlled Sorcery

Effect: The Triggering Attack gains the Friendly Keyword but it cannot deal Super Effective Damage via Type Effectiveness.

Fated Spark

Effect: The Triggering Attack cannot be Intercepted, Riposted, and Targets cannot Trigger any Effect that would cause them to resist the Triggering Attack or cause it to miss.

Serene Spirit

Effect: The Triggering Attack has a bonus to Effect Ranges equal to your Tier Level and is treated as having the Spirit Surge Keyword, but it cannot become a Critical Hit.

Warped Energy

Effect: Targets hit by the Triggering Attack subtract their Defense during Damage calculations instead of Special Defense.

AURA GUARDIAN

The nature of Aura is the very spirit or life force of a creature, exhibited by both Pokemon and Humans. Aura Guardians can harness this energy and see it. Using this energy they can bolster the power of their allies or give restorative energy to those who are injured.

Aura Guardian

[Advanced] [Class]

Prerequisite 1: Occult Researcher or Mystic **[or]**

Prerequisite 2: Adept Occult Edu or Intuition, Novice Focus Static

Effect: Choose two of Aura Blast, Detect, Force Bullet, or Vacuum Wave. You learn the chosen Attacks. When you have 4 Aura Guardian Features, choose two of Aura Burst, Aura Sphere, Focus Blast or Heal Pulse. You learn the chosen Attacks.

Aura Reading

Prerequisite: Aura Guardian, Novice Occult Edu or Intuition, Novice Focus Static

Effect: You gain the Aura Reader Capability. When you have Expert Occult Edu or Focus, choose either the Blindsense, Empath, Telepath or Tremorsense Capability to gain. Whenever you sense that a Combatant has negative intentions, you have a Boon to Skill Checks against them or opposed by them.

Ambient Aura

Prerequisite: Aura Guardian, Adept Occult Edu or Intuition, Novice Focus At-Will - Free Action

Trigger: You use an Attack with the Aura Keyword or an Ally within 5m rolls a Natural 15+ on any d20

Effect: You gain an Aura Counter (Max 6). If the Triggering Attack was a Double Strike or Five Strike, it can only trigger this Feature once.

Bonus: Aura Counters may be expended in any of the following ways

» When you or an Ally perform an Accuracy or Save Check, as a Reaction, you may expend Aura Counters to grant it a bonus equal to your Tier Level for each Counter expended. If the roll fails, you gain your Reaction back.

» On your Turn, you may use a Swift Action to Target yourself or an Ally within 3m. The Target restores Ticks of Hit Points equal to the number of Aura Counters expended. This may also be used as a Reaction when an Ally within 3m ends their Turn, but it must Target them.

Sacrificial Shield

Prerequisite: Ambient Aura, Expert Occult Edu or Intuition, Adept Focus

Scene x2 - Free Action

Trigger: You or an Ally use the Intercept Maneuver

Effect: You may expend any number of Aura Counters to alter the Attack that the Triggering Combatant is Intercepting in the following ways, which may stack if multiple instances are applied:

» **1 Counter:** The Attack is resisted by an additional Damage Step, up to Resisted.

» **1 Counter:** The Effect Range no longer Triggers or is no longer a Critical Hit.

Unleashed Aura

Prerequisite: Ambient Aura, Master Occult Edu or Intuition, Adept Focus

Scene x2 - Swift Action

Trigger: You use a Damaging Aura Attack

Effect: You may expend any number of Aura Counters and it benefits from the following effects based on the number you expended:

» **1+:** The Attack's DB is increased by double the number of Aura Counters expended.

» **2+:** Targets cannot apply Physical or Special Evasion against them.

» **3+:** Its Critical Hit Range is increased by +2 and it gains the Smite Keyword or Sureshot if it already had Smite.

Note: The rate an Aura Guardian gains Aura Counters improves greatly depending on how many allies they have. Feel free to adjust how often this occurs based on your table

EMPATH

Some Trainers gain the supernatural ability to feel the emotions of others around them, including a special connection to Pokemon. Much like Yellow in the manga series, Empaths have the power to connect to others on a deep level, which allows for a total synchronized pair.

Empath

[Advanced] [Class]

Prerequisite 1: Occult Researcher or Mystic **[or]**

Prerequisite 2: Adept Intuition

Bind X - Free Action

Target: A Creature within 20m

Effect: While a Target is bound by this Feature they become Channeled by you. If the Target is unwilling you must make an Intuition Checks opposed by their Focus Check to Bind this Feature to them. You may stop Channeling any Target as a Free Action at any time. If a Channeled Combatant would go further than 20m away from you they stop being Channeled. You are always considered a Channeled Combatant. You may only use this Feature on an Enemy once per Round. X is equal to the higher of your Intuition or Occult Edu Rank.

Bonus: You gain the Empath Capability.

Mechanic - Channeling

While Channeling a Creature, it may communicate its intentions, emotions and motivations to you and you may communicate in a similar fashion, neither party being able to be deceitful in this exchange. If you Faint, all Targets bound by the Empath Feature are unbound and no longer Channeled. If a Channeled Target Faints, they are unbound by the Empath Feature and no longer Channeled. As a general note, Channeling allows both individuals to be treated as having the Empath Capability, removes any risk of falsity and communicates more than just emotions

Twisted Emotions

Prerequisite: Empath, Novice Intuition

At-Will - Special

Target: A Channeled Enemy

Effect: As a Full Action, choose a Status Affliction or Condition to grant the Enemy listed below. If Entranced or Provoked are chosen you may choose their Fixation or Provoker respectively. If Provoked is granted this way it lasts until the end of the Target's next Turn. An Enemy can only have one Status Affliction granted this way at a time. As a Swift Action, if the Target has a listed Affliction or Condition below, you may cure it and inflict a different Affliction or Condition listed below.

» Dazed, Enraged, Entranced, Provoked, Suppressed.

Shared Conduit

Prerequisite: Empath, 2 Empath Features, Expert Intuition

Scene - Free Action

Target: Two Channeled Combatants that are within 2m of each other

Effect: Apply one of the following Effects. If both Targets are Allies, this doesn't expend this Feature's Frequency.

- » Choose a Stat. Both Targets trade the CS Values for that Stat.
- » Choose a Target to remove a Coat from and grant to the other Target.
- » Choose a Target to gain all the Mental Afflictions that the other Target is suffering from.

Soothing Pulse

Prerequisite: Empath, Adept Intuition

At-Will - Swift Action or Reaction

Trigger: A Channeled Combatant gains Initiative

Effect: Choose one of the following Effects to apply to the Triggering Combatant.

- » The Combatant restores two Ticks of Hit Points
- » The Combatant has a bonus to their next Save Check equal to your Tier Level
- » The Combatant has a Damage Penalty to their Damaging Attacks this Turn equal to your Tier Value.

Battle Bond

Prerequisite: Empath, 3 Empath Features, Master Intuition

Static

Effect: Whenever your Pokemon develop a deep bond with you at your GM's Discretion, they become Battle Bonded. Battle Bonded Pokemon are always treated as Channeled regardless of distance and don't count towards your limit of Channeled Combatants. At any point, you can use Battle Bond Techniques, but each time you use it, it will cost SP from an Active Battle Bonded Pokemon or yourself.

Battle Bond Powers are on the next page

BATTLE BOND POWERS

Symbiotic Strike

Cost: 1 SP

Effect: You or your Battle Bonded Pokemon may learn an Attack from the other's Attack List until the end of the Scene. If the Attack is not At-Will or EoT, it costs 2 SP instead.

Symbiotic Resilience

Cost: 2 SP

Effect: When you are hit with an Attack, you may use this Technique to treat your Type as being the same as your Battle Bonded Pokemon's Type, in regards to Type Effectiveness Calculations.

Symbiotic Senses

Cost: 1 SP

Effect: Until the end of the Scene, you and the Bonded Pokemon share all of the following Capabilities if one or the other has it. Aura Reader, Blindsense, Darkvision, Dream Reader, Premonition, Soul Seer, Tracker, True Sight, Tremorsense, X-Ray Vision

Symbiotic Defender

Cost: 1 SP

Effect: The Battle Bonded Pokemon may use the Intercept Maneuver as a Free Action and it doesn't increase by one damage step. If they spend 2 SP instead, or if you're the one they're intercepting for, the Attack is additionally resisted by an additional step.

Symbiotic Retaliation

Cost: 1 SP

Effect: When you or a Battle Bonded Pokemon are hit with an Attack, the other gains the Sureshot Keyword on their next Attack against the Triggering Enemy.

Symbiotic Unity

Cost: 1 SP

Effect: Whenever you use an Attack, you may shift its type to match one of the Bonded Pokemon's Types. If you have the Elemental Affinity Talent or a Type Specialist Class, the Bonded Pokemon may also use this to shift an Attack they use to that Type.

ESPER

Trainers who are experts in the art of mysticism can sometimes have psychic abilities similar to Pokemon. These manifest in many different techniques, including the ability for telekinesis, telepathy or even teleporting! Espers excels in the variety of these psionic talents.

Esper

[Advanced] [Class]

Prerequisite 1: Occult Researcher or Mystic **[or]**

Prerequisite 2: Adept Focus, Novice Occult Edu Static

Effect: Choose two of Cognition Strike, Hypnosis, Psybeam, or Psychic Terrain. You learn the chosen Attacks. When you have 4 Esper Features, choose two of Psycho Cut, Psychic, Psychic Storm or Psionic Surge. You learn the chosen Attacks.

Psionic Prowess

Prerequisite: Esper, Novice Focus or Occult Edu Static

Effect: Choose a Capability to gain along with the associated Attack in its parenthesis.

» **Dream Reader** (Dream Illusion), **Empath** (Psycho Shift), **Mender** (Heal Pulse), **Mindlock** (Calm Mind), **Mind Weaver** (Disable), **Premonition** (Mind Reader), **Telepath** (Imprison), **Telekinetic** (Telekinesis), **Teleporter** (Teleport), **Wallshaper** (Barrier)

Mental Shield

Prerequisite: Esper, Expert Focus or Occult Edu Scene x2 - Reaction

Trigger: You or an Ally within 3m gain a Mental Affliction or are hit with a Special Category Attack

Effect: If the Trigger was gaining a Mental Affliction, the Triggering Combatant automatically passes their next Save Check. If the Trigger was being hit by a Special Category Attack, you may use your Special Attack Stat towards Damage Calculations instead of the Triggering Combatant's Special Defense.

PK Force

Prerequisite: Esper, Adept Focus or Occult Edu Scene x2 - Swift Action

Trigger: You resolve a Psychic Type Attack on your Turn that Targets an Enemy

Effect: Apply one of the Effects below:

» All Targets Slide up to 3m in any direction away from you.
 » All Targets lose -2 CS in Special Defense, or -3 if it is positive.
 » You may perform a Disarm, Hinder or Trip Maneuver as a Free Action against all Targets hit by the Triggering Attack, ignoring range. When performing the opposed roll, you must use either Focus or Occult Edu. An Enemy can only be affected by this Effect once per Scene.

Metaphysical Mastery

Prerequisite: Psionic Prowess, Master Focus or Occult Edu Static

Effect: Choose two of Psycho Boost, Psycho Slash, Psionic Boost or Mirror Coat. You learn the chosen Attacks. In addition, you gain another Capability from the Psionic Prowess Feature and its associated Attack.

MARKSMAN

Experts in keeping their distance and firing from afar, Marksman Trainers excel in ranged combat. Whether by using a bow, gun, or simply throwing fireballs from the backline, Marksmen are masters as precision, accuracy and staying far away from potential trouble.

Marksman

[Base] [Class]

Prerequisite: Novice Combat or Perception

At-Will - Free Action

Trigger: You miss a 1-Target Ranged Attack

Effect: Your next 1-Target Ranged Attack gains all of the following benefits upon the Attack's declaration.

- » It gains a bonus to Critical Hit Ranges equal to your Tier Level.
- » Targets may only apply Speed Evasion against it.
- » It gains the Unstoppable Keyword.

Clear Shot

Prerequisite: Marksman, Novice Combat or Perception
Static

Effect: Whenever you use a 1-Target Ranged Attack against an Enemy that is adjacent to no other Combatants, they're treated as Vulnerable against it. If they're already Vulnerable, it instead gains the Sureshot Keyword.

Modified Ammo

Prerequisite: Marksman, 2 Marksman Features, Expert Combat or Perception
Bind 1 - Swift Action

Condition: You have a Ranged Weapon Equipped or know a Ranged Damaging Attack

Effect: When this Feature is bound, choose an Effect below to apply to all Damaging Ranged Attacks you use this Scene while bound. At the end of the Scene, this Feature is Unbound.

- » **Armor-Piercing** - Before Damage calculations, the Targets lose -1 CS in the associated Defense Stat. On a 16+ they instead lose -2 CS.
- » **Barbed** - On a 16+, the Target becomes Slowed or gains the Wounded Affliction of your choice.
- » **Distracting** - On a Hit, the Target has a -2 Penalty to their next Accuracy Check. On a miss, it is instead a -3 Penalty.
- » **Explosive** - Any Single Target Ranged Weapon Attacks become Ranged Blast 3 instead, however all Targets that aren't in the center space resist an additional damage step.

Cover Fire

Prerequisite: Marksman, Adept Combat or Perception
At-Will - Free Action

Condition: You have a Ranged Weapon Equipped or know a Ranged Damaging Attack

Effect: Create a Zone consisting of up to 4 connecting spaces that are unoccupied within 5m. Whenever an Enemy would enter one of these spaces you may Trigger an Attack of Opportunity, ignoring Range. This Zone is removed when you use a Movement Action or Reaction. You can only have one Zone created this way on the Field at a time.

Dead-Eye Shot

Prerequisite: Marksman, 3 Marksman Features, Master Combat or Perception
Scene x2 - Free Action

Trigger: You use a Ranged Attack

Effect: Perform the Accuracy Roll twice, taking either result. If both results would have hit one of their Targets, they resist it one step less to a maximum of Neutral Effectiveness and it gains the Unstoppable Keyword.

Artist: @Royalnoir

Note - When taking this Class you need to have a few Ranged Attacks learned. This can be gained through other classes that grant Ranged Attacks or primarily with Ranged Weapons.

ARTILLERIST

Some Marksmen are experts at wide scale destruction, opting for the battle style of a cannon. Artillerists specialize in wide range attacks and raining down pain onto enemies, being able to make projected attacks and zones by which enemies get hurt if they cross its path.

Artillerist

[Advanced] [Class]

Prerequisite 1: Marksman [or]

Prerequisite 2: Adept Focus or Perception

Bind X - Extended Action

Target: A Ranged Blast Attack, Line Attack or a Damaging 1-Target Attack on your Attack list.

Effect: While this Feature is Bound, the Targeted Attack's Range improves. If it was a 1-Target Attack, it becomes Ranged Blast 2. If it was Ranged Blast, increase its Area of Effect by +1. If it was Line, increase its Area of Effect by +2. X is equal to the number of Artillerist Features you have.

Projected Barrage

Prerequisite: Artillerist, Novice Focus or Perception
At-Will - Swift or Movement Action

Trigger: The Round Starts

Effect: Choose a Line or Ranged Blast Attack and create a Zone that corresponds to its Range. At the end of the Round if the user hasn't moved, the Attack is used as a Free Action, Targeting all Combatants in that Zone. (Frequency still applies)

Early Bombardment

Prerequisite: Projected Barrage, Expert Focus or Perception
At-Will - Reaction

Trigger: An Enemy enters your Zone created by the Projected Barrage Feature

Effect: The chosen Attack is immediately used as a Free Action, Targeting all Combatants in that Zone, however they resist it by an additional Damage Step. After this Attack resolves, the Triggering Enemy may continue any movement that was interrupted by this Feature. The corresponding Zone is then removed from the Field and Projected Barrage's Effect does not resolve.

Sieging Strike

Prerequisite: Artillerist, Adept Focus or Perception
Scene x2 - Free Action

Trigger: You use a Line or Ranged Damaging Attack

Effect: Choose one of the Effects to apply to the Triggering Attack.

» If the Triggering Attack was made through Projected Barrage, it gains the Sureshot Keyword.

» All Terrain within this Range are changed to Slow Terrain and all Blocking or Cover Terrain are destroyed.

» It ignores all positive Combat Stages in Defense or Special Defense.

Precision Strike

Prerequisite: Artillerist, 3 Artillerist Features, Master Focus or Perception

Scene - Swift Action

Trigger: You use a Line or Ranged Blast Attack

Effect: Choose one of the Effects to apply to the Triggering Attack.

» It gains the Friendly Keyword

» It gains the Sureshot Keyword

Bonus: Whenever you use the Artillerist Feature on a 1-Target Damaging Attack, you may also have it become a Line X Attack, where X is the range of the 1-Target Attack.

GUNSLINGER

Gunslingers don't need to literally have a gun, but they're simply marksmen that specialize in close range combat. Their nimble nature allows them to bob and weave and get close up in combat, blasting enemies with whatever projectiles they're trained in up close.

Gunslinger

[Advanced] [Class]

Prerequisite 1: Marksman [or]

Prerequisite 2: Adept Acrobatics or Intuition

Static

Effect: Whenever you use a 1-Target Ranged Attack, you have a bonus to Accuracy equal to X subtracted by Y (Even if it's Range would change as a result of a Feature). X is equal to the higher of your Acrobatics or Intuition Rank. Y is equal to the distance in Meters the Target is away from you.

Notet: If the result is negative, you don't have a penalty, simply no modifier.

Fan the Hammer

Prerequisite: Gunslinger, Novice Acrobatics or Intuition

At-Will - Swift Action

Trigger: You use a 1-Target Ranged Attack

Effect: You may change the range of this Attack to Close Blast 2 or Burst 1. When you have at least 4 Gunslinger Features, you may also change the range to Close Blast 3 or 3, 2 Targets.

Quick Draw

Prerequisite: Gunslinger, 2 Gunslinger Features, Expert Acrobatics or Intuition

Scene - Special

Trigger: You're Targeted with an Attack

Effect: Before the Triggering Attack is used, you may use an Attack with the only Target being the Triggering Enemy. If the Triggering Enemy would faint as a result, the Triggering Attack no longer resolves. If this is used as a Reaction, the Attack must be a Basic Attack, then the Frequency of this Feature is not expended. If this is used as a Standard Action, it can be any 1-Target Ranged Damaging Attack.

Trick Shot

Prerequisite: Gunslinger, Adept Acrobatics or Intuition

Scene x2 - Swift Action

Trigger: You use a 1-Target Ranged Attack

Effect: Choose an Effect below to apply to the Triggering Attack

» The Triggering Attack gains the Unstoppable Keyword. The Target must be within 2m of Cover or Blocking Terrain to choose this Effect.

» Enemies that are Adjacent to the Target of the Triggering Attack also become a Target but the Attack is resisted by an additional Damage Step.

» You may use the Triggering Attack to Target an Enemy that is illegal to Targeting due to line of sight breaking, The Target must be within 2m of cover or Blocking Terrain that is within Range and Line of sight to use this Effect.

Rapid Fire Shot

Prerequisite: Gunslinger, 3 Gunslinger Features, Master Acrobatics or Intuition

Scene - Full Action

Effect: You may perform a 1-Target Ranged Damaging Attack as a Free Action. This Attack can only have one Target and cannot Trigger any other Features. When using this Attack, perform the Accuracy Check 6 times. Each additional time it would hit the Target after the first, increase the DB by +3. Each time one of the Accuracy Rolls misses, the Target or an Enemy that is Adjacent to them becomes Wounded.

SNIPER

Compared to Gunslingers, Snipers are the opposite. These Trainers specialize in combat from afar, as far as possible from the safest and most secure position. They specialize in controlling zones, impairing enemies and having high precision with deadly results.

Sniper

[Advanced] [Class]

Prerequisite 1: Marksman [or]

Prerequisite 2: Adept Focus or Perception

At-Will - Special

Effect: This Feature can be used as a Swift Action, Movement Action or Reaction. Each time this Feature is used, add an Accuracy and Critical Hit modifier to your next Ranged Attack equal to your Tier Level. These bonuses are removed at the end of the Round.

Overwatch

Prerequisite: Sniper, Novice Focus or Perception
At-Will - Swift or Movement Action

Condition: You have a Ranged Weapon Equipped or know a Ranged Damaging Attack

Effect: Create a 3x3 Zone on the Field within 10m of you that lasts until the start of your next Turn. This zone cannot overlap a Zone you've created through the Cover Fire Feature. Whenever an Enemy in this Zone performs any of the following, you may use a Basic Attack as a Free Action with Priority against them after the Trigger resolves, treating it as a 10m, 1 Target Attack. An Enemy can only be hit by a Basic Attack this way once per Round.

- » They use an Attack against an Ally that is not within that Zone or Adjacent to them.
- » They enter a space outside of the Zone.

Trained Marksman

Prerequisite: Overwatch, Adept Focus or Perception
At-Will - Special

Condition: You have a Zone on the Field created by Overwatch

Trigger: An Enemy Party gains Initiative

Effect: You may move the Zone to anywhere else where it could legally be created. This Feature can be used as a Swift Action, Movement Action or Reaction.

Bonus: You gain the Sniper Ability.

Targeted Strike

Prerequisite: Sniper, 2 Sniper Features, Expert Focus or Perception

Scene x2 - Swift Action

Trigger: You hit a 1-Target Ranged Damaging Attack

Effect: Choose one of the following Effects to apply after the Triggering Attack's Resolution. An Enemy can only be affected by Targeted Strike once per Scene:

- » **Head Shot** - The Target becomes Blinded until the end of their next Turn.
- » **Chest Shot** - The Target becomes Vulnerable until the end of the next Round.
- » **Arm Shot** - The Target is treated as though they failed a Disarm Maneuver against the user.
- » **Leg Shot** - The Target becomes Slowed.
- » **Wing Shot** - The Target has all Movement Capabilities disabled until the end of the next Round.

Perfect Precision

Prerequisite: Sniper, 3 Sniper Features, Master Focus or Perception

Scene - Swift Action

Condition: You have no Combatants within 2m of you

Trigger: You use a 1-Target Ranged Attack against an Enemy with no Combatants adjacent to them

Effect: The Triggering Attack gains the Smite Keyword. If the Attack hits, it automatically becomes a Critical Hit. If it misses, the Frequency of this Feature isn't expended.

Artist: @Marceline Liu

STRIDER

Experts of agility, Trainers who follow the path of a Strider specialize in the Speed Stat and their Advanced Classes focus on being nimble. Striders have the ability to use Speed for Damage, reacting to physical attacks sent their way and can even perform multiple Movement Actions.

Strider

[Base] [Class]

Prerequisite: Novice Acrobatics

Static

Effect: Enemies cannot Trigger Reactions as a result of your Movement. You may learn two Attacks from the Nimble Combat Feature's Novice Attack List.

Note:- Nimble Combat's Novice Attack List is:

» Aerial Ace, Acrobatics, Agility, Quick Attack, Quick Strike, Splash

Swift Striker

Prerequisite: Strider, Novice Acrobatics
At-Will - Free Action,

Trigger: You use a Damaging Physical Attack

Effect: Choose one effect to apply.

- » You may use your Speed as an Offensive Stat
- » After the Attack's Resolution, You may Move up to 3m.
- » All Targets cannot use their Speed Evasion against the Attack

Nimble Tactics

Prerequisite: Strider, 2 Strider Features, Expert Acrobatics
Static

Effect: Choose a Nimble Tactic to gain its associated Ability in parenthesis.

- » **Accelerating** (Speed Boost), **Agile** (Alacrity), **Evasive** (Dodge), **Swift** (Rocket), **Whirling** (Lancer)

Barely Grazed

Prerequisite: Strider, Adept Acrobatics
Scene x2 - Special

Trigger: You're hit with a Physical Attack

Effect: If this is used as a Reaction, you may use your Speed Stat instead of Defense when performing Damage Calculations. If this is used as a Free Action, you may use half of your Speed Stat instead of Defense when performing Damage Calculations and the Frequency of this Feature isn't expended.

Burst of Speed

Prerequisite: Strider, 3 Strider Features, Master Acrobatics
Scene x2 - Swift Action + Reaction

Effect: You gain an additional Standard Action. You become Vulnerable until the start of your next Turn.

Bonus: The First time you would use a Movement Action each Round, it does not expend your Action.

ACROBAT

Trainers who are Acrobats take speed to the level of full Evasion. They excel at not being hit by attacks and if they're ignored, helping their less nimble allies avoid the hit as well. Through Evasion tokens and their Features, they don't need armor if they're never hit.

Acrobat

[Advanced] [Class]

Prerequisite 1: Strider [or]

Prerequisite 2: Adept Acrobatics or Intuition

At-Will - Swift + Movement Action

Effect: You gain an Evasion Token.

Bonus: You start the Scene with 1 Evasion Token (Max 3). You may expend any number of Evasion Tokens when you're hit by a non-Adjacent Damaging Attack to downgrade it. If it was a Critical Hit, it is instead a normal hit. If it was a normal hit, you resist it an additional step. If you resisted it, it instead misses. You cannot use Evasion Tokens if you have Damage Reduction from any Item you're holding or equipping.

Sidestep

Prerequisite: Acrobat, Novice Acrobatics or Intuition
Scene - Free Action

Trigger: You're hit by a Line, Burst or Blast Attack

Effect: You may slide 1m into an unoccupied space. If you are no longer in the original range of the Triggering Attack, it instead misses you. You may expend an Evasion Token when using this Feature to slide an additional 1m or not expend the Frequency of Sidestep.

Acrobatic Reflex

Prerequisite: Acrobat, 2 Acrobat Features, Expert Acrobatics or Intuition
Scene x2 - Special

Trigger: You're hit by a Ranged 1-Target Attack

Effect: You may slide into an Adjacent unoccupied space. If you do, the Triggering Attack instead misses. This Feature is a Standard Action, but if you expend 1 Evasion Token it may be used as a Movement Action or Reaction instead.

Look out!

Prerequisite: Acrobat, Adept Acrobatics or Intuition
At-Will - Reaction

Trigger: An Ally within 2m would be hit by an Attack

Effect: The Triggering Ally is treated as having access to your Acrobat Features and current Evasion Tokens and may expend their usage until the Attack resolves.

Bob and Weave

Prerequisite: Acrobat, 3 Acrobat Features, Master Acrobatics or Intuition
Static

Effect: You may use Evasion Tokens against Adjacent Damaging Attacks. The Acrobat Feature's Action usage instead becomes Swift or Movement Action. You cannot gain more than two Evasion Tokens per Round.

Evasion Token Note - You can spend multiple Evasion Tokens to downgrade an attack multiple times if desired. If an Attack is a normal hit, you can spend 2 Evasion Tokens to downgrade it to resisted, then because it's resisted, it then misses.

DANCER

The spirit of dancing can take many forms, from the nimble movements of a pirate to a shrine maiden performing sacred arts. Dancers specialize in utilizing their Movement Action for more than just movement, allowing them to dance in place and impact the field.

Dancer

[Advanced] [Class]

Prerequisite 1: Performer or Strider **[or]**

Prerequisite 2: Adept Acrobatics and Novice Charm or Guile Static

Effect: Choose two Basic Dance Technique to learn. All Dance Techniques performed by you or your Pokemon can only Target the same Combatant once per Round.

Signature Performance

[Ranked 2]

Rank 1 Prerequisite: Dancer, Novice Acrobatics and Novice Charm or Guile

Rank 2 Prerequisite: Dancer, 3 Dancer Features, Master Acrobatics and Adept Charm or Guile Static

Rank 1 Effect: Choose two Basic Dance Techniques on the next page to learn.

Rank 2 Effect: Choose two Basic Dance Techniques or one Signature Dance Technique listed on the next page to learn.

Dance Techniques are on the next page

Choreographer

Prerequisite: Dancer, Adept Acrobatics, Novice Charm or Guile

At-Will- Extended Action

Trigger: You perform a Training Downtime Action on your Pokemon who has at least Proficient Acrobatics and doesn't know a Dance Technique

Effect: Choose a non-Signature Dance Technique you learned. The Target also learns that Technique.

Captivated Audience

Prerequisite: Dancer, 2 Dancer Features, Expert Acrobatics and Adept Charm or Guile

Scene x2 - Free Action

Trigger: You use a Dance that Targets an Enemy

Effect: Choose one effect to apply to the Target. Each Enemy can only be affected this way once per Scene.

» Any Status Affliction they gain as a result can't be cured during their next Save Check

» They suffer a Bane to their next opposed Skill Check

» Their Positive Combat Stages are set to their Default Value

DANCE TECHNIQUES

Basic Dance Techniques

Beguiling Rhythm

At-Will - Swift or Movement Action

Target: An Enemy within 5m

Effect: Choose a Stat for the Target to lose -2 CS in.

Charming Serenade

At-Will - Swift or Movement Action

Target: An Enemy within 5m

Effect: You may perform the Distract or Intrigue Maneuver against the Target as a Free Action. You may use your choice of Charm or Guile instead of listed skills on the Maneuver.

Duet's Momentum

Scene x2 - Reaction or Movement Action

Trigger: You and an Ally gain Initiative

Effect: The Ally gains a bonus to Accuracy Rolls and Save Checks equal to your Tier Level until the end of this Initiative.

Evasive Footwork

Static

Effect: You gain Evasion equal to your Tier Level.

Invigorating Performance

At-Will - Swift or Movement Action

Target: An Ally within 3m

Effect: Choose Accuracy Rolls or Save Checks. The Target gains a bonus to their next Roll of that Type equal to your Tier Level.

Motivating Performance

At-Will - Swift or Movement Action

Target: An Ally within 3m

Effect: Choose a Stat for the Target to gain +1 CS in.

Performer's Stamina

At-Will - Free Action

Trigger: You use an Action on a Dance Technique or move as a Movement Action

Effect: You gain a Tick of Temporary Hit Points or a bonus to your next Save Check equal to your Tier Level.

Solo Performer

Static

Effect: Anytime you use a Dance that would Target an Ally, you may instead Target Yourself.

Taunting Flourish

At-Will - Swift or Movement Action

Target: An Enemy within 3m

Effect: The Target becomes Trapped by you. You may make a Command or Guile Check opposed by their Focus. If you succeed they become Provoked by you until the end of their next Turn.

Thrilling Performance

At-Will - Swift or Movement Action

Target: An Ally within 3m

Effect: Perform an Acrobatics, Charm or Guile Check. The Ally gains a bonus to their next Damage Roll equal to the result.

Signature Dance Techniques

Dance of Devotion

Scene- Movement Action

Trigger: An Adjacent Ally is Targeted by an Attack

Effect: You may use an Intercept Maneuver as a Free Action. You have Damage Reduction against it equal to triple your Acrobatics Rank.

Dance of Elegance

Scene - Swift or Movement Action

Effect: Perform a Charm or Guile Check opposed by all Enemies within 3m and their Focus Check. Each Enemy that fails becomes Vulnerable until the end of the next Round.

Dance of Elements

Scene - Swift or Movement Action

Target: Two Allies within 5m, one being a Pokemon

Effect: During this Scene, the second Target may use Damaging Attacks as if it's Type was one of the Types belonging to the first Target.

Dance of Life

Scene - Swift or Movement Action

Target: An Ally within 3m

Effect: The Target is cured of a Status Affliction.

Dance of Spirits

Scene - Swift or Movement Action

Target: An Enemy within 5m

Effect: Perform a Charm or Guile Check opposed by their Focus. If you succeed, the Target becomes Cursed or Suppressed

Dance of War

Scene - Swift or Movement Action

Target: An Ally within 3m

Effect: The Target's next Damaging Attack has a +2 bonus to Crit Range and gains the Smite Keyword.

SKIRMISHER

Skirmishers are nimble fighters at heart. These Trainers live in the fray and jump all over the battlefield going from one target to the next. Speed is their specialty and they can use it to confound their enemies, perform quick strikes and prevent them from responding to your punches.

Skirmisher

[Advanced] [Class]

Prerequisite 1: Strider **[or]**

Prerequisite 2: Adept Acrobatics or Combat

At-Will - Free Action

Trigger: You use a Damaging Attack

Effect: After the Triggering Attack resolves, you may Disengage as a Free Action.

Bonus: Whenever you use the Disengage Maneuver you may instead move a number of spaces equal to half the higher of your Acrobatics or Combat Rank.

Quick Footed

Prerequisite: Skirmisher, Novice Acrobatics or Combat Scene x2 - Swift or Movement Action

Effect: Choose one of the Effects to apply:

- » You ignore Movement Penalties this Round
- » Enemies cannot Trigger Reactions against you until the end of your Turn.
- » You become cured of the Slowed Affliction or Trapped Condition
- » You ignore Speed Evasion this Round

Opportunist

Prerequisite: Skirmisher, 2 Skirmisher Features, Expert Acrobatics or Combat Static

Effect: You may perform Attacks of Opportunity when an Adjacent Enemy Disengages or misses an Attack against you. At any point you can spend a Movement Action to gain an additional Reaction this Round.

Tactical Striker

Prerequisite: Skirmisher, Adept Acrobatics or Combat Static

Effect: Whenever you hit a Damaging Attack against an Enemy, all Riposte and Tactics Maneuvers you use against them gain the Sureshot Keyword and you have a Boon to their Opposed Checks until the end of the Round.

Blade Dancing

Prerequisite: Skirmisher, 3 Skirmisher Features, Master Acrobatics or Combat

Scene x2 - Swift or Movement Action

Effect: You may use an At-Will or EOT Damaging Melee Attack as a Free Action, however it is resisted by an additional damage step. You may only use this Feature once per Round.

ROGUE

Masters of the shadows, Trainers that are rogues are experts in criminal behavior and a sketchy style of fighting. Whether its the sacred art of a ninja or the underground workings of an assassin, or even the egotistical path of a swashbuckler, Rogues always play dirty.

Rogue

[Base] [Class]

Prerequisite: Novice Stealth

At-Will - Reaction

Trigger: You hit a Damaging Attack against an Adjacent Enemy

Effect: After the Attack's Resolution, you may perform a Manipulate or Tactic Maneuver against one Target of the Triggering Attack as a Free Action, excluding Attack of Opportunity or Throw.

Bonus: You may learn two Attacks from the Criminal Combat Feature's Novice Attack List.

Note:- Criminal Combat's Novice Attack List is:

» Blindsight, Feint Attack, Gash, Hone Claws, Sucker Punch, Thief

Sneak Attack

Prerequisite: Rogue, Novice Stealth

At-Will - Free Action

Trigger: You hit a Damaging Attack against an Enemy that is Flanked, Vulnerable or Unaware of your presence.

Effect: The Triggering Attack has a Damage Bonus equal to your Tier Value.

Criminal Specialty

Prerequisite: Rogue, 2 Rogue Features, Expert Stealth Static

Effect: Choose a listed Criminal Specialty to gain its associated Ability in the parenthesis.

» **Aggression** (Defiant), **Infiltration** (Infiltrator), **Intimidation** (Intimidate), **Manipulation** (Analytic), **Thievery** (Pickpocket).

Hidden Shroud

Prerequisite: Rogue, Adept Stealth

Scene x2 - Free Action

Trigger: You use the Hide Maneuver

Effect: For the Duration of the Hide Maneuver or until you use an Attack (Whichever comes first), you become Untargetable. While Untargetable, Enemies are unaware of your presence. Enemies may use a Swift Action to perform a Perception or Intuition Check opposed by your Stealth. If they pass, they do not treat you as having the Untargetable Condition.

Cunning Bladework

Prerequisite: Rogue, 3 Rogue Features, Master Stealth

Scene x2 - Swift Action

Trigger: You hit a Damaging Attack against an Adjacent Enemy

Effect: Before the Triggering Attack resolves, choose an effect to apply. An Enemy can only be affected by Cunning Bladework once per Scene:

- » The Target gains the Wounded Affliction and cannot cure it for their next Save Check
- » The Target becomes Slowed and Tripped
- » The Attack is treated as Super Effective. This may only be applied if the Target has a Status Affliction or is under 50% HP.

ASSASSIN

Fighters or Rogues that master the art of hunting down a single target can carry the name of an Assassin. As an assassin, they choose a target on the field to single out with a death mark. From then they can have high effectiveness with critical hits or massive damage on them.

Assassin

[Advanced] [Class]

Prerequisite 1: Rogue [or]

Prerequisite 2: Adept Combat or Stealth

At-Will - Swift Action

Target: An Enemy you can see

Effect: The Target makes an Intuition or Perception Check opposed by your Combat or Stealth. If they fail, they become Marked with your Death Mark. Whenever you use an Attack with its only Target having your Death Mark, Enemies other than the Target cannot Trigger Reactions against it.

Lethal Attack

Prerequisite: Assassin, Novice Combat or Stealth
At-Will - Free Action

Trigger: You hit a Damaging Attack against an Enemy that is Flanked, Vulnerable or Unaware of your presence.

Effect: The Attack has a bonus to Critical Hit Ranges equal to your Tier Level. If the only Target is an Enemy with your Death mark, the bonus also applies to Effect Ranges.

Exploit Weakness

Prerequisite: Assassin, 2 Assassin Features, Expert Combat or Stealth
Scene x2 - Swift Action

Trigger: You hit a Damaging Attack against a Single Enemy that has a Status Affliction, has your Death Mark or is Vulnerable.

Effect: The Triggering Attack is one step more effective against the Target (Max 1.5x Effectiveness). An Enemy can only be affected by this Feature once per Scene. If the Target has 2 or more Afflictions, the Frequency of this Feature is not expended.

Fatal Expertise

Prerequisite: Assassin, Adept Combat or Stealth
Static

Effect: Choose Shadows or Toxin. For each Assassin Feature you have, learn an Attack listed below. Whenever you gain an Assassin Feature, learn an Attack listed below. If you chose Shadows, all Damaging Attacks gained this way are Dark Type. If you chose Toxin, all Damaging Attacks gained this way are Poison Type.

» Assassinate, Cross Poison, Night Slash, Camouflage, Sharpen, Mind Reader, Lock-On, Concentration, Gash, Hone Claws

Assassination

Prerequisite: Assassin, 3 Assassin Features, Master Combat or Stealth

At-Will - Free Action

Trigger: You hit a Damaging Attack against a Single Enemy with your Death mark and 50% or fewer Hit Points

Effect: The Attack is automatically a Critical Hit. An Enemy can only be affected by this Feature once per Scene.

Bonus: You are able to sense when an Enemy has 50% or fewer Hit Points.

NINJA

Ninjas are likely the most versatile of fighters within any setting, and Pokemon isn't any exception. Characters like Koga and Janine may follow the traditional path of a ninja, but there are plenty of other options! This includes an illusionary specialty, psionics and shadows.

Ninja

[Advanced] [Class]

Prerequisite 1: Rogue **[or]**

Prerequisite 2: Adept Ninja Skill

Static

Effect: Choose a Ninja Specialty listed below. You then gain the associated Capabilities of that specialty.

» **The Path of Deception** - Blender & Illusionist

» **The Path of Psionics** - Pick two of Aura Reader, Mindlock, Telekinetic, Telepath & True Sight

» **The Path of Shadows** - Dead Silent, Darkvision, Shadow Meld

» **The Path of Tradition** - Climber, Jumper & Quick

Note: Ninja Skills are Acrobatics, Guile, Intimidate or Stealth

Ninja's Arsenal

Prerequisite: Ninja, two Novice Ninja Skills

Static

Effect: Your Damaging Attacks have a 17+ Effect Range to cause Targets to become Poisoned. When performing a Crafting Downtime Action you may create Hazard Bags with any of the following Attacks:

» Iron Spikes, Poison Gas, Smokescreen, Spikes, Toxic Spikes

Precise Attack

Prerequisite: Ninja, 2 Ninja Features, an Expert Ninja Skill

At-Will - Free Action

Trigger: You use a Damaging Attack against an Enemy that is Flanked, Vulnerable or Unaware of your presence.

Effect: The applicable Targets are treated as Vulnerable against the Triggering Attack. If they are already Vulnerable or Poisoned, it gains the Sureshot Keyword instead.

Shinobi Combat

Prerequisite: Ninja, two Adept Ninja Skills

Static

Effect: You learn all the Attacks listed under your chosen Ninja Specialty except the one with the [Master] tag. Once you have 4 Ninja Features, you learn the Attack under your Specialty with [Master] listed next to it.

» **The Path of Deception** - Double Team, Devious Strike, Haunting Visage, Deception **[Master]**

» **The Path of Psionics** - Imprison, Magic Powder, Psycho Cut, Psycho Slash **[Master]**

» **The Path of Shadows** - Shadow Strike, Shadow Snare, Shadow Veil, Shadow Bolt **[Master]**

» **The Path of Tradition** - Agility, Toxic, Cross Poison, Assassinate **[Master]**

Mastered Technique

Prerequisite: Ninja, 3 Ninja Features, a Master Ninja Skill

Static

Effect: Choose two Abilities to gain; one without a Ninja Specialty listed and one with your Specialty listed. You cannot choose an Ability with a listed Specialty that isn't the one you picked.

» Ambush, Infiltrator, Run Away, Copy Master (**Deception**), Illusion (**Deception**), Shadow Tag (**Shadows**), Spectral Cloak (**Shadows**), Mental Assault (**Psionics**), Memory Wipe (**Psionics**), Deadly Poison (**Tradition**), Poison Point (**Tradition**)

SWASHBUCKLER

The life of a pirate is one that varies depending on the person. A swashbuckler could be a trainer with fighting prowess or verbal prowess, as they come with many skills. However all Swashbuckler have a sense of superiority and always end up on top in combat.

Swashbuckler

[Advanced] [Class]

Prerequisite 1: Rogue **[or]**

Prerequisite 2: Adept Swashbuckler Skill

Static

Effect: Your Damaging Attacks have a 12+ Effect Range to grant you a Panache Coat. This Effect Range cannot be extended like normal Effect Ranges.

Panache Mechanic is explained below

Note- Your Swashbuckler Skills are Acrobatics, Charm, Combat, Command, Guile, Intimidate and Stealth.

Creed of the Corsair

[Ranked 3]

Rank 1 Prerequisite: Swashbuckler, two Novice Swashbuckler Skills

Rank 2 Prerequisite: Swashbuckler, two Adept Swashbuckler Skills

Rank 3 Prerequisite: Swashbuckler, an Expert and Adept Swashbuckler Skill

Effect: For each Rank, choose two Swashbuckler Techniques to learn.

Swashbuckler Techniques are on the next page

Mechanic - Panache Coat

This Coat may be expended as a Free Action when performing an Accuracy Roll, Save Check or Skill Check in Combat to roll twice, taking either result. If the user gains a Status Affliction or is Critically Hit by an Attack, any Panache Coat they have is expended. Whenever you expend your Panache Coat, you cannot gain another during the same Turn.

Flourishing Finisher

Prerequisite: Swashbuckler, 3 Swashbuckler Features, a Master and Expert Swashbuckler Skill

Scene x2 - Free Action

Condition: You have a Panache Coat

Trigger: You hit and resolve a Damaging Attack

Effect: You may perform any of the following Maneuvers as a Free Action against a Target of the Triggering Attack. Additionally, you may expend a Panache Coat to treat the Maneuver as if they had the Sureshot Keyword and the Resistant Keyword for Maneuvers is ignored.

» Distract, Intrigue, Provoke, Terrorize, Disarm, Hinder, Push, Trip

SWASHBUCKLER TECHNIQUES

Braggart's Swagger

At-Will - Free Action

Trigger: You cause an Enemy to become Provoked by you or inflict a Mental Status Affliction

Effect: You gain a Panache Coat.

Combat with Style

Static

Effect: Choose two Attacks from any combination of the following Feature's Novice Attack Lists to learn. Once you have 4 Swashbuckler Features you may choose two more. Alluring Combat, Criminal Combat, Imposing Combat, Martial Combat, Nimble Combat

Feinting Strike

At-Will - Reaction

Trigger: An Enemy would Trigger an Attack or Ability in response to your Attack

Effect: You may expend a Panache Coat to ignore its effects but the Frequency and Action used are refunded.

Flamboyant Ego

Static

Effect: While you have a Panache Coat, you cannot gain a Mental Status Affliction.

Humbling Reassessment

Scene - Reaction

Trigger: You're hit by a Critical Hit or gain a Status Affliction while you have a Panache Coat

Effect: The Panache Coat is still expended as normal, however the Triggering Attack is no longer a Critical Hit or you are immediately cured of the Affliction.

Nimble Superiority

At-Will - Free Action

Trigger: You're Targeted by an Attack

Effect: You may expend a Panache Coat to have the Triggering Attacker perform the Accuracy Roll against you twice, taking the lower result. While you have a Panache Coat, you gain Evasion equal to your Tier Level.

Outnumbered but never Outmatched

At-Will - Free Action

Condition: You are Flanked

Trigger: You hit a Damaging Attack against an Enemy that is Flanking you

Effect: You gain a Panache Coat.

Privateer's Prowess

Static

Effect: Choose two Swashbuckler Skills to increase to the next Skill Rank, if you meet the prerequisites for that Rank.

Stylish Attack

At-Will - Swift Action

Trigger: You hit a Damaging Attack against an Enemy that is Flanked, Vulnerable or Unaware of your presence

Effect: You gain a Panache Coat after the Triggering Attack resolves.

Victorious Bravado

At-Will - Free Action

Trigger: An Enemy faints

Effect: You gain a Panache Coat. If you already have one, you instead gain +1 CS in a Stat of your choice or a Tick of Temporary Hit Points

PROVOCATEUR

Do you want to be a silver tongued menace? Provocateurs and their Advanced Classes are Trainers that specialize in using words as weapons. Through attacks like Charm or Taunt, they can easily inflict Mental Afflictions on enemies and pester them all day.

Provocateur

[Base] [Class]

Prerequisite: Novice Provocateur Skill

At-Will - Free Action

Trigger: You hit a Social Attack or Manipulate Maneuver

Effect: One Enemy hit by the Triggering Attack or Maneuver has a penalty to all Accuracy Rolls and Save Checks equal to your Tier Level until the end of their next Turn. Provocateur can only be used once per Round.

Bonus: You may learn two Attacks from either the Alluring Combat Feature or Imposing Combat's Novice Attack List, or a combination of either.

Note: Provocateur Skills are Charm, Command, Guile, or Intimidate.

Cutting Words

Prerequisite: Provocateur, a Provocateur Skill at Novice
Static

Effect: Your Social Attacks have a 18+ Critical Hit Range. If they were to Critical Hit, roll a 1d4. All Targets hit by the Triggering Attack lose X Ticks of Hit Points where X is equal to the result. You have a +2 Modifier to Critical Hit Ranges when using a Social Attack against an Enemy for each Mental Affliction they have.

Quick Wit

Prerequisite: Provocateur, 2 Provocateur Features, a Provocateur Skill at Expert
Scene x2 - Reaction

Trigger: You're Targeted with an Attack

Effect: Before the Triggering Attack is used, you may use a Social Attack or Manipulate Maneuver as a Free Action, but it can only Target the Triggering Enemy. They cannot apply Speed Evasion against this Attack.

Mind Games

Prerequisite: Provocateur, a Provocateur Skill at Adept
Scene x3 - Swift Action

Trigger: You hit a Social Attack used as a Standard Action

Effect: The Attack gains one of the following effects. An Enemy can only be affected by each effect of Mind Games once per Scene.

» All Targets become Provoked by you until the end of their next Turn.

» All Targets become Suppressed or Enraged of your choice.

» All Stats lowered by the Triggering Attack are lowered by an additional -1.

» Status Afflictions gained by the Triggering Attack cannot be cured during their next Save Check.

Under their Skin

Prerequisite: Provocateur, 3 Provocateur Features, a Provocateur Skill at Master
Scene - Free Action

Trigger: You're hit with an Attack from an Enemy with a Mental Affliction or that is Provoked by you

Effect: If the Triggering Attack was a Status Attack, it misses. If the Triggering Attack was a Damaging Attack, it is reduced by an additional damage step.

Bonus: You have +1 Uncapped Evasion against Enemy Attacks for each Mental Affliction they're affected by.

DEBONAIR

Some Trainers go beyond just smooth talking and their Charisma is truly breathtaking. Even their enemies aren't immune to their influence, as Debonairs have the power of Coersion. This special Affliction allows the Trainer to have some sway over what Enemies do in combat.

Debonair

[Advanced] [Class]

Prerequisite 1: Provocateur [or]

Prerequisite 2: Adept Charm or Guile

Static

Effect: You learn the Cute Charm Ability. Whenever you Entrance an Enemy that is already Entranced, they become Coerced.

Mechanic - Coerced

Coerced is a Mental Affliction that cannot be cured unless the affected Combatant is also cured of the Entranced Affliction (By which this is cured as well). At the start of a Coerced Combatant's Turn, apply one of the Effects below

- » Choose a Maneuver. The Coerced User cannot use that Maneuver until the end of the next Round.
- » Choose a Type. The Coerced User cannot use Attacks that match that Type this Turn.
- » Choose an Enemy. The Coerced User cannot be Targeted by them or Target them until the end of the next Round.
- » Choose yourself or an Ally. The Coerced User becomes Provoked by them this Turn.

Silver Tongue

Prerequisite: Debonair, Novice Charm or Guile
At-Will - Swift Action

Trigger: You hit a Social Attack against a single Enemy used as a Standard Action

Effect: The Attack gains one of the following effects. An Enemy can only be affected by each effect of Silver Tongue once per Scene.

- » The Enemy becomes Entranced
- » The Enemy becomes Vulnerable until the end of the Round.
- » Choose an Ally. the Enemy treats that Ally as their Fixation as well if they're Entranced.

Charming Visage

Prerequisite: Debonair, 2 Debonair Features, Expert Charm or Guile
Static

Effect: You gain the Beautiful Ability. The User's Entranced Effect Ranges for Status Attacks are increased by +2. Whenever the user would inflict a Mental Affliction, they may instead Entrance the Targets.

Mind Manipulator

Prerequisite: Debonair, Adept Charm or Guile
Scene - Free Action

Target: An Enemy within 6m that has a Mental Affliction

Effect: You may use a Manipulate Maneuver against them as a Free Action.

Bonus: Your Manipulate Maneuvers gain the Sureshot Keyword against Enemies with a Mental Affliction. You have a Boon to Skill Checks against or opposed by Enemies with a Mental Affliction.

Swayed Allegiance

[Order]

Prerequisite: Debonair, 3 Debonair Features, Master Charm or Guile
Scene - Full Action

Target: A Coerced Enemy within 3m

Effect: You may have the Target Slide up to their Movement Value. The Target performs an Attack as a Free Action as if it had the Priority Keyword. You choose the Attack that they use and its Targets. The Attack used does not have its Frequency expended.

GM Note

As a GM you can either have the Player choose Targets to Attack and you choose what they use or you may disclose the Target's Attack List and have the user decide

TRICKSTER

Much like Masterminds, Tricksters are Trainers who have mastered the art of trickery and non-violent combat. Trickster take provocation to the next level and torment through maneuvers and are much more efficient with their deception compared to other types of Trainers.

Trickster

[Advanced] [Class]

Prerequisite 1: Provocateur [or]

Prerequisite 2: Adept Guile or Gen Edu

At-Will - Free Action

Trigger: You hit a single Enemy with a Status Attack

Effect: After the Attack's Resolution, you may perform a Manipulate or Tactic Maneuver against the Target of the Triggering Attack as a Free Action, excluding Attack of Opportunity or Throw, provided you're in range. For any opposed Checks you may use Guile or Gen Edu instead of the listed Skills. Trickster may only be used once per Round.

Tormenting Wit

Prerequisite: Trickster, Novice Guile or Gen Edu
Scene x2 - Swift Action

Trigger: You inflict a Status Affliction on a single Enemy

Effect: That Enemy gains a Tormented Coat. Whenever an Enemy with a Tormented Coat fails a Save Check, they lose a Tick of Hit Points for each Affliction they're affected by. If an Enemy were to have no Afflictions, their Tormented Coat is expended.

Bonus: You have +3 Uncapped Evasion against Enemies with your Tormented Coat.

Quick Trick

Prerequisite: Trickster, 2 Trickster Features, Expert Guile or Gen Edu
Static

Effect: You gain the Prankster Ability.

Sly Malediction

Prerequisite: Trickster, Adept Guile or Gen Edu
Scene x2 - Free Action

Trigger: You succeed the Skill Check for a Manipulate Maneuver other than Analyze or hit a single Enemy with a Social Attack

Effect: Choose an Affliction the opposing Enemy has. They cannot cure that Affliction via Save Checks until the start of your next Turn. Sly Malediction can only affect an Enemy once per Scene.

Encore Performance

Prerequisite: Trickster, 3 Trickster Features, Master Guile or Gen Edu
Scene x2 - Free Action

Trigger: You use a Status Attack with the Versatile Keyword as a Standard Action

Effect: After the Triggering Attack resolves, you may use it again as a Swift Action using the Versatile Effect, ignoring the restrictions of the Versatile Keyword and ignoring its Frequency. A specific Attack can only Trigger this Feature once per Scene.

Bonus: You may use Status Attacks through the Versatile Keyword regardless if you used a Damaging Attack this Round and you may still use Damaging Attacks after resolving an Attack this way.

RUFFIAN

Trainers who are Ruffians impose authority and fear on those they face. Whenever they speak, enemies cower and for good reason. In combat they also have plenty of defensive capabilities such as gaining grit and defense, shrugging off damage and being an outright menace.

Ruffian

[Advanced] [Class]

Prerequisite 1: Provocateur [or]

Prerequisite 2: Adept Command or Intimidate

At-Will - Free Action

Trigger: You hit an Attack or Maneuver

Effect: One Target of the Triggering Attack or Maneuver loses -1 CS in a Stat of your choice. If the Triggering Attack was a Social Attack, it affects all Targets instead. A Combatant may only be affected by this Feature once per Round.

Fearsome Force

Prerequisite: Ruffian, Novice Command or Intimidate
Scene x2 - Free Action

Trigger: You hit a Social Attack

Effect: After the Triggering Attack resolves, you may use the Terrorize Maneuver against all Targets hit by the Triggering Attack. The Maneuver cannot miss but still performs the Opposed Check.

Shrug Off

Prerequisite: Ruffian, 2 Ruffian Features, Expert Command or Intimidate
Scene x2 - Swift Action

Effect: Choose one of the following Effects to apply. If the user is below 50% Hit Points, this doesn't expend the Frequency of Shrug Off.

- » The User gains a Tick of Temporary Hit Points
- » The User is cured of a Physical Status Affliction
- » The User removes a Coat or Mark affecting them

Combat Grit

Prerequisite: Ruffian, Adept Command or Intimidate

At-Will - Free Action,

Trigger: You're hit by a Damaging Attack or hit a Damaging Attack

Effect: After the Triggering Attack resolves, you gain +1 Grit Counter. You may have a Maximum number of Grit Counters equal to double your Tier Level.

Bonus: For each Grit Counter you have, you have +5 Damage Reduction. Whenever you restore Hit Points or gain a Status Affliction, you lose half your Grit Counters (Rounded Up).

Not even a Scratch

Prerequisite: Ruffian, 3 Ruffian Features, Master Command or Intimidate

Scene - Reaction

Trigger: You would Faint

Effect: You are instead set to 1 Hit Point. If you have any Grit Counters, they may all be removed and you gain a Tick of Temporary Hit Points equal to the number removed, however these Temporary Hit Points are removed at the start of your next Turn.

Starting Combat

Combat in Pokemon Tabletop Evolution takes place over multiple 10 second **Rounds** where combatants each have a **Turn** (Or **initiative**, used interchangeably) in which they can perform actions.

To determine the order by which combatants take their Turns, perform the following steps below. Once you get used to playing, some of these steps you'll know already and not have to determine when combat starts!

1. Determine all of the Combatants

At the start of a Scene, all Combatants have a brief moment to enter the Field. During this Step, ask your Players what Pokemon they want to be active on the field. They may release all of these Pokemon as a Free Action, ignoring normal Switching rules. (Remember you can have multiple Pokemon active at a time!). During this time, create a deployment Zone to determine which spaces are valid to start in.

2. Divide all Combatants into Parties

All unique groups of combatants form their own parties, including the Players. Each unique group typically has their own goal or interest separate from other Parties. For instance, a group of Wild Pokemon might want to drive off the Players that have stumbled into their territory, while a nearby group of Evil Team Grunts wants to capture the Wild Pokemon, but don't care much about the Players. NPCs typically shouldn't share a party with Players.

3. Determine which Party goes first

The GM determines what approach each Party is taking to the combat, and determines a relevant Skill to use for Initiative. Using the previous example, if the Evil Team Grunts are sneaking up on the Wild Pokemon, the Grunts might roll Stealth for their Initiative. The Wild Pokemon are watching for invaders, but are also acting aggressive and territorial, so they could reasonably roll Perception or Intimidation. The Players are relatively unaware of what's happening, so they would likely need to roll Perception or Intuition to determine their Initiative.

To resolve the rolls, every involved combatant rolls with an appropriate Skill. This can differ within a Party - for instance, the Wild Pokemon mentioned could have some of their members roll Perception and others roll Intimidation. Sum the total successes rolled from each Party. The Party with the most Successes or the Party with the highest Success number goes first (At the group's discretion), and the other Parties follow in descending order. If another Party joins an encounter during the fight, have them roll their appropriate Skill, and then insert them in the Initiative order according to their Successes rolled during the next Round.

Alternatively, if only one Combatant is Initiating, all opposing Combatants that are involved must exceed the number of successes of the initiator's Skill Check. If it is entirely unclear who should go first, or what Skills would be relevant, Luck Checks may be used in place of Skill Checks.

GM Note: If you and your players fully agree that a certain Initiative Order makes the most sense, you may forgo rolling and simply use that Initiative Order. Make sure your players are on-board with this idea before you use it!

Example: A Villain is monologuing in front of a group of players while one of his henchmen reaches for their weapon slowly. They perform a Stealth Check with 4 Successes. All Players that can see this henchmen may roll a Perception or Intuition and if they beat 4 Successes, they start the Scene.

4. The Initiators begin the Scene

When a Party gains Initiative, up to two Combatants may take their Turn. During these Turns, they can use any number of Actions available to them in any order between them. After these Turns are completed, the next Party gains Initiative. A Combatant may choose to end their Turn with unused Actions, which could be used if an Effect is Triggered that would require that Action. But unused Actions do not carry over to the next Round.

5. Take Turns until there are no Combatants left to take Actions

Initiative will swap from Party to Party until all Combatants that can use an Action have done so. If one Party has multiple Combatants who have Actions left who haven't taken a Turn yet, they can take it in succession until none remain, instead of just choosing two Combatants.

6. Start the next Round

Once Step 5 is completed, the Round ends. Any effect that would apply at the end of a Round then occurs. This can include environment changes, Lair Actions, Conditions or Affliction being removed, etc. The Party that starts the next Round is any Party that wasn't the last to act last Round. If the Enemies took their turns last during Round One, then the Players will start Round Two. At the start of this Round, all Combatants gain their appropriate set of Actions once more. This process will repeat until all members of a Party are Fainted or Surrender.

Alternative Initiative

There are a few additional ways you can start a Scene, listed below.

Alternative Initiative Rules

Take the Speed Stat of all Combatants and organize them in a list from highest to lowest. We recommend the other version but if you don't wish to move from PTU, it doesn't kill anything besides the flow of combat being less dynamic. Note that mechanics that reference the Initiative will not factor into this method of tracking Initiative.

Surprise Rounds

Sometimes the flow of a Scene can be interrupted by a sudden action such as a Charizard suddenly using a flamethrower, or a sniper suddenly shooting from stealth. When this occurs, determine which of the following applies to the situation.

1. Sudden Attack

If all opposing Combatants are aware of the Initiator's presence, but someone decides to start combat unexpectedly, they may not have time to prepare! When beginning the Scene, there is no Initiative Check. Instead, the first Combatant or Combat Pair to act are the ones who act first. During the next round however, the Initiative Check is performed at the start of the Round and it continues as normal.

For example, if the villain is monologuing in order to distract the players, they may suddenly call for an allied grunt to charge and launch an Attack! The Players however are aware of the grunt attacking but they won't be able to act faster than them. This allows the grunt to act first, ignoring their Speed or normal Initiative conventions.

2. Stealth Attack

If all opposing Combatants are *not* aware of the Initiator's presence, the Surprise Round may instead lead to a Stealth Attack! In this example, let's say the villain is monologuing and while doing so, they send a secret code to a hidden Intelleon that is hiding in a nearby bush. The Intelleon then uses Sniper Shot on the Party and initiates combat! The same as Sudden Attacks, there is no Initiative Check for the first Round, but in addition, the Initiator treats all Enemies as if they were Vulnerable!

The only difference however is that a Skill Check is required in order to succeed in a Stealth Attack. If the Initiator wins, they may continue as normal. If they lose however, any Attack the initiator performs is resisted by an additional Damage step and enemies gain +9 Evasion against it (Basically maximum evasion value). This Skill Check is made upon the Attack's declaration and can be any Skill determined by the GM. In this example, they could have an Intuition Check to determine the body language of the villain. Or there could be a Perception vs Stealth Check to see if the Intelleon was found by the Players!

Moving on the Field

Movement during combat is fairly simple so we'll resolve the basics in a few bullet points.

» **Pokemon Tabletop Evolution uses a square combat grid.** Each Square (Or Space) is considered 1 meter and it takes 1m of movement to move into that Square, regardless if it's diagonal or not.

» **Each Combatant occupies a number of spaces based on their Size Category.** Small and Medium Combatants take up a 1x1 Square. Large Combatants take up 2x2 and Huge takes up at least 3x3. Depending on the Combatant's shape, Huge Combatants could be a custom size, such as an Arbok being 2x5.

» **Movement Maneuvers** exist as options you can do, all under the Bolster Maneuvers. This includes **Disengaging**, which allows you to move 1m without Triggering an Attack of Opportunity, **Jumping**, which allows you to ignore Terrain and Hazards you move over, and **Sprinting**, which allows you to increase your Movement Value per Movement Action.

» **Movement** can be performed as a **Movement Action** where by default you can move up to 6 Meters. This can be altered by Movement Capabilities or Terrain you move through. You cannot split up Movement when you use a Movement Action unless you perform another Movement Action.

For example, you cannot move 3 Meters, Attack, then move another 3 Meters, as after the first 3m moved, your Movement Action is resolved.

» **Sliding** is the process of moving involuntarily, such as through an Attack like Hydro pump that slides you away from the source. This movement does not Trigger Attacks of Opportunity but does apply the effects of Terrain you're Slid through. The source of the Sliding determines the path in which you take whenever you Slide, however the GM has the final say.

Combat Positioning

There are a few different states one can be in during combat based on where they are on the field, these are known as **Position States**, each of which are listed below. Consider these equivalent to **Conditions** that persist while they're in this position.

Adjacent - Two Combatants are Adjacent if they occupy spaces that are touching each other (Including corners) or occupying the same space.

Flanked - A Combatant is Flanked whenever they have two Enemies adjacent to them, but those Enemies are not Adjacent to each other. If a Combatant is Large Sized or bigger, they need at least three Enemies to become Flanked, or one of the two must be Large Size or bigger. While a Combatant is Flanked, they apply -3 less Evasion against Attacks from Enemies.

Surrounded - A Combatant becomes Surrounded whenever they have at least three Enemies adjacent to them. Enemies that are Large Sized or bigger cannot be Surrounded. While Surrounded, a Combatant cannot apply Evasion against Attacks from Enemies. Surrounded Combatants are also considered Flanked.

High Ground - A Combatant has the High Ground State whenever a Target is at least 2m below them. Targets of someone who has the high ground apply -3 less Evasion against the Attacks of the Combatant with the high ground.

Low Ground - A Combatant has the Low Ground State whenever they Target an Enemy that is at least 2m above them. Targets of someone who has the Low Ground compared to them have +3 additional Evasion against their Attacks.

Example (Flanking): Aipom is currently being flanked

Terrain Tags

The Battlefield has a lot of diversity depending on the area surrounding you. You could battle in a simple city or basic terrain or you could be in a hazardous cave with a lot of lava pools and stalactites! **Each space on the battlefield may have numerous different Terrain Tags** assigned to them or objects occupying those spaces, each of which adding diversity to what you may encounter. All Tags are listed below.

[Basic] - Nothing is special about this Terrain

Example: Simple Grassland, Dirt, Pavement

[Slow] - Entering this Terrain costs 2 Movement Value instead of 1. Slow Terrain can be ignored if the Combatant has the Naturewalk for the associated Biome Tag on the Terrain.

Example: Mud, Shallow Rivers, Spider Webs

[Rough] - Ranged Attacks that Target a Combatant within Rough Terrain or travel through Rough Terrain have a -2 Penalty to Accuracy Rolls.

Example: Tall Grass, Dust Clouds, Smoke

[Elevated] - Compared to base level, assign a value of 1-4 Meters to this space to be higher than those around it. Melee Attacks cannot Target Enemies that are at least 2 Meters above or below them and are not considered Adjacent when occupying an Adjacent space.

Example: Towers, Hills, Cliffs, Boxes

[Cover] - If a Ranged or Line Attack would Target a Combatant that is Adjacent to Cover Terrain, it is resisted by an additional damage step. Cover Terrain has no effect if any of the following is applicable

» The Attacker is Adjacent to the Target

» The Target is a larger size than the Cover Terrain

» The Cover does not break the line of sight for the Attack

Example: Barricades, a Large Tree, Edge of Blocking Terrain

[Blocking] - This Terrain cannot be occupied by Combatants other than through the Phaser Capability and cannot be moved through. Blocking Terrain can either be **Small** or **Large**. If the Terrain is **Large**, it breaks line of sight and blocks Attacks that would travel through it such as Line or Ranged. If it is **Small**, it doesn't break line of sight or block Attacks.

Example: Small could be Barricades or Machinery. Large could be Walls or Trees.

[Breakable] - This Terrain or an Object within this Terrain can be destroyed when targeted by a Damaging Attack. When this Terrain or Object is destroyed, something may happen, which usually can be figured out through an Analyze Maneuver or prior knowledge. Breakable Objects are automatically hit when Targeted.

Fragile Breakable Objects are destroyed when hit by one Attack and **Dense** Breakable Objects are destroyed when hit by two Attacks.

Example: An explosive barrel that causes an explosion when hit. A pulsating artifact that causes a buff while not destroyed.

[Hazardous] - This Terrain is considered to have a Hazard Effect in them. Whenever a Combatant enters the space willingly or unwillingly or ends their Turn on it, they'll be affected by its Effects unless otherwise stated by the Hazard of its trigger conditions. A Combatant can only be affected by a specific Hazardous Terrain Effect once per Round, regardless of how many they activate. Only one Hazard may exist on a space at a time and Hazards cannot be placed on a space that already has one.

Example: Scorched ground that causes burns. Caltrops that inflict wounded. Miasma that lowers Sp Atk by -1 CS.

[Blessed] - This Terrain or an Object in is the source of a buff. The GM determines how this buff is granted, usually by either being within a range of the Terrain or starting your turn on, ending your turn on or entering the Terrain. Combatants can only be affected by a specific Blessed Terrain Effect once per Round, regardless of how many they activate.

Example: A Flag that while active, grants Temp HP within 2m at start of Turn. Holy ground that grants +3 to Saves while standing on it.

[Reactive] - This Terrain or Objects within it have a Trigger condition. When that Trigger condition occurs, something will happen, which can usually be figured out by an Analyze Maneuver. To determine this Trigger, either set a time limit (# of Rounds) or a range by which the Trigger can occur.

Example: A sizzling bomb will explode in 1 Round. Crumbling Terrain that will collapse after being entered. A rare crystal may shatter if an Attack hits a Combatant within 1m of it.

[Biome] - This space can be assigned with any Biome stated in the Naturewalk and it categorizes Combatants as standing in that Terrain.

Default Terrains: Grasslands, Forest, Wetlands, Tundra, Mountain, Cave, Desert, Ocean, Urban, Space

Environmental Modifiers

Sometimes you may want to add a sense of danger or realism to a location a Party is going in. When determining a scene, you may add any of the following environmental modifiers depending on what makes sense to be present.

As a note, you should have all native Pokemon immune to Environmental Modifiers, as they're usually native to the area and have adapted to its conditions. If desired you could have them affected as well but it would make sense for a Lillipup that was raised in a dark cave to gain darkvision and be used to the low lighting. Some Water Pokemon found at sea may also not have the Gilled Capability to go underwater which would make more sense to ignore.

Note: Have any suggestions? Feel free to send a message in our Discord!

Storming Weather - Weather will be persistent throughout the Encounter, whose type is most logical for the terrain. This could include Sunny Weather in a Volcano, Snowy Weather in a Tundra, or Foggy Weather in a City.

Harsh Heat - All Water Type and Ice Type Damaging Attacks are resisted by an additional step. Burn Ranges are extended by +2. Any Combatant wearing [Large] or heavy equipment such as steel plating or a winter jacket will be treated as Vulnerable. It is likely to be Sunny in this Area.

Harsh Cold - Combatants that aren't Fire or Ice Type suffer a-3 to Evasion. Chilled Effect Ranges are extended by +2. It is likely to be Snowy in this Area.

Underwater - Combatants without the Swimmer Capability treat all spaces as Slow Terrain. Whenever a Combatant ends their Turn without the Breathless or Gilled Capability, they take Suffocation Damage.

Low Vision - Combatants without the Blindsense, Darkvision or Glow Capability suffer a-3 to Accuracy Roll and -2d6 to Perception Checks. If there is instead no Vision and complete darkness, those without the above Capabilities are instead Blinded until their situation would change.

Shifting Terrain - At the start of each Round, the GM may shuffle any number of spaces and on a failed Acrobatics Check with a Standard CR (2), any Combatants standing on them are either Tripped or follow the space to its new destination. During this action, you may also create any Cover or Blocking Terrain in any pattern that is desired.

Oppressive Force - Some kind of energy or force is present on the battlefield and negatively affects the Players and their Party. On a failed Focus Check with a Tough CR (3), they suffer the negative effects depending on their Degree of Failure...This check may be repeated at the end of each Round if it is present, however the CR is lowered by 1 each subsequent time.

Mystical Force - Some kind of beneficial energy is present on the battlefield, positively affecting either the native Pokemon or all combatants. Examples could include a blessed field that cures all Status Afflictions, an Aura that increases Damage by +3 DB, or the energy of a crowd that increases all Rolls by +2.

Example (Gym Modifiers) - A Gym Battle in a Ghost/Dark Gym has a small fog that spreads across the battlefield, which results in the Storming Weather Effect and causing the battle to begin with Foggy Weather. In addition, in the crowd of the gym, there are many ghost enthusiasts and supernatural fanatics that are cheering for the gym leader, some even performing rituals to boost their performance, resulting in the Mystical Force Effect that causes all Ghost Type Damaging Attacks to gain the Smite Keyword.

Basic Attacks

Basic Attacks are always on a Trainer and Pokemon's Battle Attack list without taking an Attack Slot, symbolizing the simplest of attacks, such as punching someone or a Charmander shooting a puff of flames at someone.

Basic Attacks are referred to by other sections of the system, such as using Attacks of Opportunity. The following has the information on a Basic Attack:

Basic Attack

Frequency: At-Will

Range: Melee, 1 Target

Category: Physical or Special

Type: Normal

AC: 4

DB: 4

Effect: None

To those of you familiar with PTU, this is basically the same as a "Struggle" Attack, but expanded slightly more in order to give it some quality of life improvements and removing Struggle Modifiers like Firestarter or Fountain.

This is the default information for a Basic Attack, however **they can be altered in numerous ways listed below.**

» When performing a Basic Attack, the user may change the Type from Normal to any of the Types they are, such as a Charmander using a Fire Type Basic Attack.

» If the user has the Ranger Pokemon Role, the Range of Basic Attacks may also be 6, 1 Target.

» If the user is holding a Short Ranged Weapon, its Range may be changed to 6, 1 Target. If it's a Long Ranged Weapon, its Range may be changed to 12, 1 Target, but cannot Target Adjacent Enemies. If the Weapon is Melee, the DB is increased by +2 when used this way.

Additionally, **here are some rules that apply to Basic Attacks**

» Basic Attacks are treated as an "Attack" and can have a STAB bonus for Pokemon and can have DB modifiers applied to them such as through Technician.

» Basic Attacks ignore Ghost Type Immunity, instead being treated as if it were Resisted.

» Basic Attacks cannot Trigger anything from yourself or allies that do not specifically mention Attacks of Opportunity or Basic Attacks. This means if it just mentions an "Attack" being used, it cannot Trigger it.

Attack Info

Pokemon may learn up to a Maximum of **6 Attacks at a time** (Unless something would grant Attacks that don't expend an Attack Slot). Trainers however may learn as many Attacks as they gain from sources that apply to them! Unless stated in the Attack's Range, all Attacks require a Standard Action to utilize. Keywords like **Versatile** may allow some Attacks to be used as Swift Actions with different effects, and keywords like **Full Action** mean an Attack requires a Standard and Swift Action. An example of an Attack is listed below, along with an explanation of each component of an Attack.

Attack: Silver Wind
Type: Bug
Frequency: At-Will
Range: 6, 1 Target
Category: Special
AC: 2
DB: 6
Effect: On a 18+, the user gains +1 CS in all Stats. Spirit Surge

Attack- The first line is obviously the name of the Attack, which is what you declare when using the Attack. In this case, it's called Silver Wind.

Type - Next up is the Elemental Type of the Attack. There are Bug, Dark, Dragon, Electric, Fairy, Fighting, Fire, Flying, Ghost, Grass, Ground, Ice, Normal, Poison, Psychic, Rock, Steel and Water Attacks! This will determine the Type effectiveness.

Frequency - Frequency determines the rate at which you can use this Attack and how often during a Scene.

- » **At-Will:** These Attacks can be performed every turn if desired
- » **EOT:** Every Other Turn, these Attacks can only be used once every other Turn and cannot be used two turns in a row.
- » **Scene:** Scene Attacks have a limited number of times they can be used during a Scene, notified by the number next to them. An Attack with the Scene Frequency can only be used once, while one with Scene x2, may be used twice. In addition, these Attacks function similarly to EOT where they cannot be used two turns in a row.
- » **Static:** Given to very few Attacks, some Attacks like Wrap are given Static Effects which passively apply,

Range - Range specifies the distance in meters from which the Attack can hit. Keywords are also tagged on in the Attack's Range. If an Attack's Range changes, the Keywords are not changed, such as Dash or Priority. Besides the standard numerical distances, other common distances include Melee, Self and Field. Self Attacks simply target the user, Melee Attacks have a range of 1, and thus must target an Adjacent Target. The Field Range applies to the entire Field or Targets every Combatant if applicable, but rare. When using Area of Effect Attacks, such as ones with the Burst or Blast Range, make a single Accuracy Roll for the entire Attack. If a Target of the Attack would result in a different Accuracy Modifier when Targeting them specifically, only apply that modifier in the calculations against its relevant Target (Such as if you're Provoked)

Category - The Damage Category will also be listed on the Attack and will be one of 3 types, **Physical, Special or Status**. Physical Attacks are resisted by the Defense Stat and can be avoided via Physical or Speed Evasion and use the Attack Stat as the Offensive Stat. Special Attacks are resisted by the Special Defense Stat and can be avoided via Special or Speed Evasion and use the Special Attack Stat as the Offensive Stat. Status Attacks do not have Damage Bases and may only be evaded by Speed Evasion.

Accuracy Check (AC) - The Accuracy Check is used when a Combatant uses an Attack in which they perform an Accuracy Roll with a d20. The Accuracy Check is the result you need to match or exceed in order for the Attack to hit.

Damage Base (DB) - The number next to the Damage Base indicates the base amount of Damage dealt. Refer to the Damage section further on to determine what the equation is for the Damage Roll of the corresponding Damage Base. Many Effects or Features could modify the Damage Base of an Attack!

Effect - Effects list what the Attack does in addition to its Damage. Effects do not activate unless the Attack hits, or if the Attack has the Spirit Surge Keyword. Effect Ranges can be extended by other Effects. For example, with Silver Wind, the Effect Range is an 18+. If it is extended by +2, it now Triggers on a 16+. Some Features or external factors may extend Critical Hit or Effect Ranges, however they cannot be extended past a total of +6 from their Natural Range. If an Attack has a Burn Range of 19+, the most it can be extended to is 13+.

Attack Keywords

In order to minimize text, Keywords are added to Attacks for common effects. There are two types of Attack Keywords, **Passive Keywords** and **Effect Keywords**.

Passive Keywords are listed in the Range of the Attack to describe Attacks that have a unique category. Examples include **Aura Attacks**, **Blessing Attacks** or **Full Action Attacks**. These Keywords persist even if an Attack's Range is changed, despite being in the Range Cell.

Effect Keywords denote a common effect that is abbreviated to shorthand that are less of a category and more of an Attack's Effect. Examples include **Smite Attacks**, **Drain Attacks** and **Slide Attacks**.

Passive Keywords

Aura / Bite / Defensive / Healing / Punch / Sonic
These Attacks are referred to by other Features or Abilities such as Strong Jaw.

Blessing - All Combatants allied to the user and the user may benefit from the Blessing's Effects. The Attack's Effects describe how a Blessing may become activated. The Blessing persists until all activations are used or the Scene ends.

Coat - Coat Attacks grants the Target a Coat which while they have it, grants them its effects. A Combatant cannot have multiple coats of the same name. Coats have listed methods by which they are expended but are otherwise removed when the Target faints, the Scene ends, or an effect would destroy them.

Dash - If the user moves at least 2m in a straight line towards the Target and did not start their turn within 2m of them, Dash may be Activated. Regardless of if it's Activated, Attacks with this Keyword may choose to use Speed as if it were the Offensive Stat.

Full Action - Full Action Attacks require a Full Action to use, taking both a Standard and Swift Action.

Groundsource - Groundsource Attacks do not have their Accuracy lowered as a result of Terrain and ignore Blocking Terrain. These Attacks may also be used without line of sight, however if they hit, they are treated as if they missed with the Smite Keyword.

Hazard - Hazard Attacks cover a stated portion of the field, turning the Terrain into Hazardous Terrain, applying on top of any other effects applied to that Terrain. (Allowing Terrain to be both Slowed and Hazardous). Each Hazard will specify whether it affects only Allies, only Enemies or all Combatants. A Space may only be affected by one Hazard at a time, and if another Hazard would be set there, it replaces it unless it is a Blocking Hazard. An Enemy can only be affected by the same Hazard Effect once per Turn.

Interrupt - Interrupt Attacks may be declared in the middle of another Combatant's Turn in order to allow the user to take an Action. They work the same Priority (Advanced) effects in that they only allow you to take the Action that has Interrupt and not a Full Turn. Interrupt Attacks resolve before the Triggering Condition would take place.

Pass - At any point during a Movement Action used to move, the user may declare a Pass Attack. Once declared, the user may move forward up to 4 Meters, moving through occupied spaces as if it were Basic Terrain. The user must end in an Unoccupied Space. The Pass Attack Targets all Combatants that were moved through in this way, but each Target may only be hit once. The user cannot continue their Movement Action after moving through the 4 Meters. Shifting as a result of the Pass Keyword does not provoke Attacks of Opportunity. In order to use a Pass Attack this way, the user must have sufficient Movement remaining.

Ability Keywords

Connection (X) - The listed Attack next to the Connection Keyword is automatically learned when the Ability is gained and doesn't take an Attack Slot

Innate - Abilities with the Innate Keyword cannot be disabled, removed or obtained by combatants other than the Pokemon who took this ability.

Priority - At the Start of a Round, or after any Action resolves, you may declare a Priority Attack to use it immediately ignoring Initiative, as if it were a Trigger condition. This requires that you have the relevant Action available this Round. No Reactions can be made to this by Combatants with a lower Speed Stat than you.

Reaction - Reactions work the same as the Interrupt Keyword, however they occur after the Triggering condition is fully resolved. The user must survive the Trigger condition to be able to perform the Reaction.

Reckless- Reckless Attacks usually have some sort of negative penalty in their Effect applied to the user and may be referred to by other Abilities or Features.

Recoil- When this Attack hits, determine the Target that took the most Damage from this Attack. The user then loses hit points equal to the Damage taken multiplied by the Fraction listed next to the Recoil Keyword.

Set-Up - Set-Up Attacks cannot be used without Charge Tokens gained from their corresponding Charge Effect, and they expend all their Charge Tokens on use. You may use a Swift Action to Charge a Set-Up Attack you know, resolving its Charge Effect and gaining a Charge Token for it. If you had Charge Token(s) from a different Set-Up Attack, they are lost without further effect. You cannot Charge and Resolve a Set-Up Attack in the same round. Charging does not count as using an Attack, nor does it expend its frequency; however, you cannot Charge an Attack if you could not use it otherwise (i.e. it has no remaining Frequency, it's Disabled, etc.).

Shield - This Keyword is attached to some Interrupt Attacks when the Attack would prevent another Attack from hitting. Any Effects that activate off of being hit, beyond the Shield's Trigger, do not occur. In order to use a Shield Attack it must be the first thing Triggered (Ex: You cannot use Flame Body, then Protect)

Social - Social Attacks are socially manipulative based and may be referred to by other Abilities or Features. These Attacks cannot be Intercepted.

Trigger- Attacks with this Keyword specify their Trigger condition in their Effect and cannot be used if that condition is not met. If it is met however, it allows the user to perform the relevant Action outside of their Initiative.

Unstoppable - Enemies cannot activate Triggers in response to an Attack with this Keyword.

Upgrade - X - An Attack with the Upgrade Keyword will have a different Attack name in its brackets. If you were to learn the listed Attack, you must remove this Attack from your Attack List and it cannot be relearned. Note: In the base system, this only applies to Legendary Signature Attacks, but can also be used to homebrew signature Attacks for your Pokemon!

Versatile- Attacks with the Versatile Keyword may also be used as a Swift Action if the user has not performed a Damaging Attack this Round (Excluding Attacks of Opportunity). When a Versatile Attack is used this way, Damaging Attacks (Excluding Attacks of Opportunity) cannot be used by the user for the remainder of the Round. When using an Attack as a Swift Action through the Versatile Keyword, refer to the text next to "Versatile" for its new Effects or to see how the Attack is altered. An Attack with the Versatile Keyword cannot be used twice in the same Round.

Weather - Attacks with the Weather Keyword create Weather on the Field while they're affecting the Field. If a Blessing or Field Effect were to be removed, the Weather that was created from it is also removed. The Field can have up to two Weathers affecting it at a time, then any further Weather introduced overwrites the least recent Weather added to the Field. Weather itself doesn't do anything but other Attacks, Features or Abilities may reference a Weather condition and have a bonus effect. **There are 8 Types of Weather. Windy, Foggy, Mystical, Sunny, Snowy, Rainy, Thunderstorm and Sandstorm.**

Effect Keywords

Double Strike - Double Strike Attacks have their Accuracy Roll performed twice. If both Accuracy Rolls would result in hitting the Target, the Damage Base Value is doubled. Each hit may Critically Hit separately; when adding damage from Critical Hit, add the Damage Base before it is doubled. For example, if one Double Kick Attack is a Critical Hit, add 1d8+5 to the Damage Roll. If both are Critical Hits, add 2d8+10.

Drain- When this Attack hits, determine the Target that took the most Damage from this Attack. The user then restores Hit Points equal to half the Damage taken.

Friendly - Allies of the user of this Attack ignore the Effects of this Attack and do not take Damage from it, and are not treated as being hit by the Attack.

Five Strike - If you hit with a Five Strike Attack, roll additional Accuracy Checks until you miss, to a maximum of 5 total Checks. For each subsequent hit past the first, add +X to the Attack's Damage Base, where X is your Tier Level. Critical Hits and Effect Ranges can only be triggered from the first Accuracy Roll.

Spirit Surge - This Attack's Effects and Effect Keywords occur regardless if it hits its Target(s). If an Effect Range must be met, the Accuracy Roll still must meet this condition. Attacks used through the Versatile Keyword ignore the Spirit Surge Keyword.

Slide X- All Targets are moved a number of Meters with the max number moved being the value of X. The user may determine the path and final destination of the Target, following listed restrictions. Restrictions may be listed in parenthesis after the Slide Keyword such as (Towards) or (Away). If it specifies Towards, they cannot slide into spaces further than the user and conversely for Away. Movement via the Sliding triggers Hazards but not Attacks of Opportunity. Combatants cannot slide vertically.

Sureshot- Attacks with the Sureshot Keyword do not have an AC and automatically hit unless they would otherwise be avoided such as through a Shield Attack. They may still perform an Accuracy Roll for sake of being a Critical Hit or Effect Ranges. These Attacks cannot be intercepted.

Smite- Smite Attacks deal damage as if they were resisted by an additional damage step whenever they would miss. Targets dealt damage this way ignore the Effect and other Effect Keywords of the Attack (Excluding Damage).

Tutor Attacks

Each Pokemon has two sets of Attack Pools they can learn from, their **Level-Up List** and their **Tutor List**.

Level-Up Lists are Attacks they learn when they reach a certain level, as the name suggests.

Tutor Lists are a consolidated group of Attacks that the Pokemon could learn from all other sources. In the games, this was **Tutor Moves (From NPCs)**, **Egg Moves (From Breeding)**, and **Technical Moves (Learned from TMs)**. Combining it all under one list makes it easier to teach them these Attacks!

Learning Tutor Attacks - Pokemon can access Attacks from their Tutor List multiple ways. One way is through level milestones, as some milestones allow you to learn a free Tutor Attack! Another way is through Tutor Records, our version of TMs which can be rewarded to teach Tutor Attacks of a specific category. One last way they can be learned is through the Mentor Trait and the Training Downtime Action!

Tutor Rules - Whenever a Pokemon would learn a Tutor Attack or be granted one, they must follow the restrictions below. Any of the listed DB restrictions are before applying STAB.

» Pokemon **under Level 20** can only learn Attacks of an **At-Will or EOT** Frequency and with a **Max Damage Base of 7**. These Attacks are listed under the Pokemon's **Tier 1** Tutor Attacks

» Pokemon that are **at least Level 20** may learn Attacks that **aren't Scene [x1]** with a **Max Damage Base of 9**. These Attacks are listed under the Pokemon's **Tier 2** Tutor Attacks

» Pokemon that are **at least Level 40** have **no restriction** and may learn any Attacks on their Tutor List. These Attacks are listed under the Pokemon's **Tier 3** Tutor Attacks

» **Attacks that modify their Damage Base are all Tier 2 Tutor Attacks**, ignoring the rules above.

Note: The Pokedex will be inaccurate with their Tier Lists, as they've been changed many across multiple versions I've used the dex for. Please refer to the rules above to verify the the Attack has the correct listed Tier. Feel free to report inaccuracies as I'll update them at some point!

Range Keywords

Range Keywords denote the area of effect and how this Attack can be used. Below is a list of Range Keywords, how they'd be listed on an Attack and a picture to show how they may be used.

Note: If a Range has a Semicolon [;] in it, it has two different Ranges and can be used either way and is grouped separately. If a Range says [8, 1 Target, Double Strike; or 8, 2 Targets, Full Action, Smite], it should be viewed as (8, 1 Target, Double Strike) or (8, 2 Targets, Full Action, Smite)

Palossand is using a Melee Attack on Machop

Melee

Example: Range: Melee, 1 Target | Range: Melee, All Adjacent Enemies

The Attack can only Target Combatants that are in a Space that is Adjacent to the User. Most Melee Attacks are 1 Target but if they specify more than 1 Target, all Targets must be within melee range. This is considered a Melee Attack for anything that would mention it.

Claydol is using a 6, 1 Target Attack on Solosis

Ranged X, Y Targets

Example: Range: 6, 1 Target | Range: 8, 3 Targets

The Attack can only be used to Target Y Enemies within X Meters of the User. In the Example, the Attack can Target 1 Enemy within 6m of the User. This is considered a Ranged Attack for anything that would mention it

Xatu is using a 6, Ranged Blast 2 Attack on Torracat & Morgrem

X, Ranged Blast Y

Example: Range: 6, Ranged Blast 2 | Range: 8, Ranged Blast 3

The Attack creates a Y by Y Zone up to X Meters away and hits all legal Targets within. This is considered a Ranged Attack for anything that would mention it.

Seaking is using a Line 4 Attack on Marowak & Combusken

Line X

Example: Range: Line 3

The Attack creates a line that is at most X Meters long starting from the User and hits all Targets in that Line. A line must originate from an Adjacent Space to the User and continue in that direction as straight as possible. If an Attack is Line 7, it could be utilized as if it were Line 4, as 7 is the maximum length it can be.

Excadrill is using a Close Blast 2 Attack on Sandlash

Close Blast X

Example: Range: Close Blast 2

The Attack creates a X by X Zone, by which one space of the Zone must be in an adjacent space to the User and hits all Targets within.

Nidoking is using a Burst 2 Attack on Raichu & Malarar

Burst X

Example: Range: Burst 1

The Attack hits all Targets in a zone where the User is at the center and all spaces are X meters away from the User. If the Attack is Burst 1, it Targets all adjacent spaces because they're all of the spaces within 1m of the User.

Swalot is creating a 2x3 Zone of Toxic Spikes

Zone

Example: Create a "3x2" Zone

A Zone is a range of Spaces that cover the listed area. The above example is both a "3x2" Zone and a Zone of 6 Contiguous Connected Spaces. The Effect that created the Zone is applied to all of these Spaces and those within them. Unlike Hazards, Zones can overlap and multiple Zones can affect a singular space, however Zones of the same name/effect can never overlap from Allied Combatants. If a Combatant would occupy two Zones of the same name/effect, only one of them applies.

Using Attacks

Whenever you attempt to use an Attack, you must make an **Accuracy Roll**, and to hit, this roll must meet or exceed the **Accuracy Check (AC)**.

An **Accuracy Roll** is always simply **1d20**, but is modified by the user's Accuracy Modifier, by certain Attacks and other effects. Note that modifiers to Accuracy Rolls do not affect effect ranges or critical hit ranges, as those have to be natural results before modifiers are applied.

Example: If you use Flamethrower with an Accuracy Bonus of +4 and roll a 16 this would neither be a Critical Hit, nor inflict a Burn despite the Effect Range being 18+.

An **Accuracy Check** is the number an Accuracy Roll needs to meet or exceed to hit. It's determined first by taking the Attack's base AC and adding the target's Evasion. For example, if using Earthquake, which has an Accuracy Check of 2, against an opponent with a Physical Evasion of +4, you would need to roll a 6 or higher on your Accuracy Roll to hit the target. Conversely, it may be easier to subtract the relevant evasion from the result of the Accuracy Roll and compare it to the Attack's AC to determine if it hits, whichever method is easier.

Here are some notes and rules when making Attacks:

- » A roll of 1 is always a miss, even if Accuracy modifiers would cause the total roll to hit. Similarly, a roll of 20 is always a hit unless avoided, such as by a Shield Attack or by an Ability.
- » Attacks, Features, Abilities, or other mechanics that trigger on being hit may be declared before or after damage is rolled.
- » Attacks that have multiple Targets roll once, but apply modifiers separately. If you Target two Enemies with an area of effect attack and roll a 15 and one gives you a -2 Penalty to Attacks against them, the first Target is treated as the result being 15 and the other is treated as the result being 13.
- » When an Attack hits a Target and that Target uses a Feature, Ability, Attack, or other mechanic that causes the attack to miss, a combatant intercepts for the target, or otherwise redirects the attack to themselves, the original target may not trigger any Features, Moves, Abilities, or other mechanics that require them to be hit (this does not retroactively invalidate the mechanic that caused the attack to miss). In the case of a target change, the new target may activate such mechanics.
- » A Target can willingly choose to be hit by an Attack by not applying their Evasion.

Dealing Damage

When an Attack hits, you apply any effects of the Attack to the target, including damage. When rolling Damage, check the attack's **Damage Base**. This number serves as a guide for an Attack's strength, which translates to a specific amount of damage. Many effects, such as **Same Type Attack Bonus** or **STAB** for short may alter the Damage Base of Attacks.

After applying all modifiers that alter Damage Base, see the corresponding **Damage Roll** in the Damage Charts. This is the roll to which you add your Attack or Special Attack Stat. After you have added your appropriate Attack Stat (Based on its Category) to the Damage Roll of the attack, add any additional modifiers that may apply. **You can add a single stat to Damage Calculations a Maximum of one Time.** (No doubling up through Feature usage!)

The Target then subtracts the appropriate Defense Stat based on its Category. Physical Attacks have Defense subtracted from them; Special Attacks have Special Defense subtracted from them. If the target has **Damage Reduction**, that is subtracted afterwards.

After defenses and damage reduction have been applied, **apply Type Weaknesses or Resistances**. A Super-Effective hit will deal x1.5 damage. A Double Super-Effective or higher hit will deal x2 damage. A Resisted Hit deals 1/2 damage; a Double Resisted or less hit deals 1/4th damage. See the **Type Effectiveness Chart** to see how Pokémon Types match up against each other.

Same Type Attack Bonus

If a Pokémon uses a damaging Attack with which it shares a Type, the Damage Base of the Attack is increased by +2. This is referred to as 'STAB'.

Hit Point Loss

Effects that say "loses Hit Points" do not have Defensive Stats or Damage Reduction applied to these Hit Point changes.

Tick of Hit Points

Some effects use this term. A Tick of Hit Points is equal to 1/10th of someone's maximum Hit Points.

Critical Hits

On an Accuracy Roll of 20 (Or possibly lower if their Critical Hit Range is extended or they have Crit Range Modifiers), a Damaging Attack is a Critical Hit. A Critical Hit adds the Damage Roll a second time to the total damage dealt, but does not add the Offensive Stat or Damage Bonuses a second time. For example, a DB 6 Attack is originally 2d6 + 8. Because it's doubled, it becomes 4d6+16 instead if it crit.

Damage Formula

Putting this all together, the process for calculating damage is as follows:

1. Find initial Damage Base
2. Apply Five/Double-Strike if applicable
3. Add Damage Base modifiers for final Damage Base
4. Modify Damage Roll for Critical Hit if applicable
5. Roll damage
6. Add relevant attack stat and other bonuses
7. Subtract relevant defense stat and damage reduction
8. Apply weakness and resistance multipliers.
9. Subtract final damage from Target's Hit Points.

Damage Chart Below this section is what each Damage Base equates to as far as Damage Rolls. Simply roll the dice shown, adding the modifier next to it, and then add your Attack Stat to determine the total damage dealt.

DB	Damage Roll	DB	Damage Roll
1	1d6+1	15	4d10+20
2	1d6+3	16	5d10+20
3	1d6+5	17	5d12+25
4	1d8+6	18	6d12+25
5	1d8+8	19	6d12+30
6	2d6+8	20	6d12+35
7	2d6+10	21	6d12+40
8	2d8+10	22	6d12+45
9	2d10+10	23	6d12+50
10	3d8+10	24	6d12+55
11	3d10+10	25	6d12+60
12	3d12+10	26	7d12+65
13	4d10+10	27	8d12+70
14	4d10+15	28	8d12+80

Note: These values will likely be changed once I get someone on the team who is good with numbers

Example (Damage Roll): A Bisharp uses the Throat Chop Attack on an Alakazam. Going through the steps, the initial Damage Base is 8. There isn't any Double Strike or Flve Strike. It has a +2 DB Boost from being STAB, leading to DB 10. It didn't crit. The Damage Roll is 3d8+10 and it adds a 27 Damage Bonus considering the Attack is Physical and its Attack Stat is 27 (Offensive Stat). The roll result 20 from the 3d8, plus 10 plus 27 equaling 57 Physical Dark Damage. Alakazam has 8 Defense, leading to 45 Damage and it is Super Effective, multiplied by 1.5. **Alakazam takes 68 Damage.**

Other Damage Types

Any source of Damage that comes from non-Attack sources are listed below, along with the rules on how to resolve it. Be sure to use other Damage Types to spice up conflict and remember that the battlefield is alive!

When using Attacks through the Improvised Damage or Environmental Damage method, the Offensive Stat you use is either based on the Initiator of the Damage or based on its relative power level, listed below. If the Initiator is in control of the Damage, use their Offensive Stat instead but if it is out of their control, use the following values:

Weak Damage (20) Strong Damage (40) Massive Damage (80) Mythical Damage (120)

Improvised Damage

Sometimes during combat, you look at something and get an idea. Next thing you know, you're swinging a metal chair at an Incineroar. Or even better, you shoot a Chandelier to drop onto someone. Or even better, you shoot an oil barrel to make an explosion! This is similar to Environmental Damage but is not from the environment and is instead a singular source used as a tool to deal damage.

It's basically resolved the same way but can lead to different scenarios. When dealing with Improvised Damage, determine the source and determine how the action is best to resolve. This usually results in an Attack being used that the Initiator normally wouldn't know, however it is a one time usage. Do not let players repeat prior accepted sources just for expanded type coverage unless it comes at a cost such as by taking an Inventory Slot. It shouldn't be a bit where every combat, some guy goes "Do I see a metal chair nearby to throw at them?"

Improvised Damage Examples

Ex 1: Swinging a Metal Chair at an Incineroar is determined to be equivalent to using the Brutal Swing Attack but it is Steel Type instead of Dark. The Chair however becomes dented and unusable afterwards. The GM Determines that the Player uses their Attack Stat since they control the chair.

Ex 2: The GM Determines that the Chandelier has a Physical Evasion of 4 but on hit, it drops in a Blast 3 Range underneath it. Those hit by it are hit with the Heavy Slam Attack as if it were Weight Class 6. It also has a 15+ Effect Range to Trip Targets. The GM determines this Chandelier results in strong Damage, giving it an offensive stat of 40.

Ex 3: The GM determines that shooting the Oil Barrel will lead to a DB 15 explosion, dealing Fire Type Damage with massive damage giving it an offensive Stat of 80. The Damage will also be a Burst 3 Range, being very deadly to anyone inside.

Environmental Damage

Environmental Damage is very similar in application to Improvised Damage, but entirely in the GM's control on whether it occurs or not, considering it's the setting reacting in a way to damage others. Similarly, when the Environment would deal damage, choose a similar Attack or a damage type and category. Then determine its strength level to determine its offensive stat. Then determine its range and who and how it affects others. Additionally, determine methods of avoiding this damage such as passing a Skill Check or failing an Accuracy Check.

Environmental Damage Examples

Ex 1: A Steam Geyser in a cave starts sizzling, projecting a range in which it will attack next round. It then explodes, causing the Attack Scald to hit in a Burst 1 Range. It is considered strong damage, having 40 Special Attack. Good thing an enemy was pushed into it!

Ex 2: A Tree was knocked over after a Heracross missed a megahorn attack. This results in the tree performing the Wood Hammer Attack as if it was a Line 3 Attack opposing the direction heracross attacked. It was a smaller tree so it dealt weak damage with a 20 Attack Stat.

Ex 3: A windstorm is being caused by Tornadus, leading to extremely dangerous Weather. Combatants that don't pass a Tough CR (3) Athletics Check each round will be attacked by a Gust Attack based on Tornadus's Special Attack Stat.

Suffocating Damage

While rare, sometimes creatures can suffocate and lose the ability to breathe! When they do so, perform the following.

At the end of the Turn of a Suffocating Combatant, if they're still suffocating, they **lose two Ticks of Hit Points**. Then the next round if they're still suffocating, they lose **three Ticks instead**, then this continues, adding a Tick each time, **maxing out at 5 Ticks**. Combatants only take Suffocation Damage once per Round if they would have multiple Turns. This can be a very deadly state of being, so make sure you remove the source of Suffocation or resolve Combat fast or else it could spell disaster!

Suffocation Damage does not need to only be from sources such as the inability to breathe, but it is meant as a mechanic to deal increasing damage over time. Any of the following examples could result in Suffocating Damage.

Suffocation Damage Examples

Ex 1: A Trainer is being pinned into a pond while grappling with a Machop and drowned while they have dominance.

Ex 2: An Occult Trainer is dealing with exhaustion and takes Suffocation damage whenever they perform a Special Category Attack as a representation of mana thirst and mental overexertion.

Ex 3: A King was poisoned and the castle is suddenly being raided by marauders! This toxin is much deadlier than the Poisoned Affliction, leading to suffocation damage until he can get medical attention.

Falling Damage

Before I even start, **do not push people into ravines or chasms unless it's intended for a Narrative Death**. This is not meant for that kind of falling. With that out of the way, Falling Damage is typeless Physical Damage depending on how far you fall and some other factors. **For each Meter you fall before landing, roll a d6**. You may replace 3 Meters with a d20 if desired for physical play or lack of dice or if you don't like counting. You take damage equal to the result. The following factors may influence how much damage you take:

Where did they Land?

Depending on where they landed it could lead to adding more "Meters Fallen" or subtracting from the amount as it softened their blow. Did they land on a mattress? A 4m Fall could be lessened to 1m. Did they break their fall by landing on branches and a trash pile? It could be dropped to 2m instead of 4. Did they land on concrete and had a harder fall? This means it dealt more damage and maybe felt like a 10m fall instead of 4. This is all GM Discretion. If something leads to a harder fall add more meters to the Damage Roll, if it absorbed the blow, subtract a few meters.

Was the Falling Intentional?

Sometimes people like to jump a little further than they should or perhaps even fail an acrobatics check and fall while parkouring on rooftops. If a fall was unintentional such as being pushed off a cliff, proceed as normal with Damage Roll Calculations. If it was intentional such as jumping off a roof to get to safety, subtract half the user's Acrobatics Rank (Rounded Up) from the number of Meters fallen.

Falling Damage Example

Ex 1: A Trainer riding a Braviary is 4 Meters up in the air and the braviary faints, causing them to fall onto a rocky surface. Considering it's a tough terrain, they're treated as falling an extra 2m. They take damage equal to 2d20.

Type Effectiveness

This is the **Type Effectiveness Chart**! Whenever an Attack of one of the Types on the Left Targets a Pokemon, find its Type(s) on the top for Type Effectiveness. Then multiply the damage dealt by its effectiveness, after defenses are applied, by the number shown above. **If it's Super Effective, it is multiplied by 1.5x. If it's Resisted, it is multiplied by 0.5x.**

Note that Type Effectiveness does not affect Status Attacks, only Physical and Special Attacks are affected. Confuse Ray for example, despite being Ghost Type, can still hit Normal Type Pokemon. Attacks that cause loss of Hit Points such as Counter or Sonic Boom however are affected by Immunity, though not resistances.

Unlike Pokemon, Trainers do not innately have a Type and all Attacks on them do neutral Damage.

Type-Effectiveness is a bit more complicated if the defender has **two types**:

- » **If both Types are neutral**, the attack of course is simply **neutral**
- » **If both Types are resistant**, the attack is doubly resisted and does **x 0.25 damage**
- » **If both Types are weak**, the attack is doubly super effective and does **x2 damage**.
- » **If one Type is weak and one is resistant**, the attack is **neutral**.
- » **If either Type is Immune**, the attack misses

If a Pokémon is Immune to the damage of an Attack, no effect of that attack is applied to that Pokémon.

For Example, rolling a 19 on Mud Slap vs a Flying Pokémon does not lower their Accuracy. If an Attack has the Spirit Surge Keyword, the effect still goes off regardless if the target is Immune.

Type Matchups Artist: @Unknown

⊙ Super Effective (Double Damage)
△ Resist (Half Damage)
✕ Immune (No Damage)

Combat Maneuvers

Sometimes, the best option in a fight isn't just to hit the other side as hard as you can. You can gain a tactical advantage on the field of battle by relieving an opponent of their weapon, momentarily tripping them, or even simply pushing them in a specific direction.

Pokémon and Trainers can use all Combat Maneuvers, unless otherwise noted (Such as Minion Pokemon). Maneuvers with an Accuracy Check have Targets apply Speed Evasion against them but are not treated as Status Attacks (For the sake of Abilities like Prankster).

Each Combat Maneuver has a Category as well, which may be referenced by outside sources. The Categories are:

Bolster - Bolster Maneuvers are Maneuvers that **improve your own position in battle** or help your Allies, adapting to your Environment. This can include Disengaging, Sprinting or Hiding.

Manipulate - Manipulate Maneuvers involve **social methods of combat that affect your Enemies**. This can include Provoking, Distracting, Intriguing or Terrorizing others.

Tactic - Tactic Maneuvers involve **different styles of Combat that affect your Enemies**. This can include Disarming, or Grappling others.

All Combat Maneuvers are on the next few pages

Some Maneuvers have the **Resistant** Keyword. This Keyword means that **after they're hit with that Maneuver and it resolves, they have a Boon for any related Skill Checks** for the rest of the Scene, even if they won the Opposed Check. If a Combatant would Fail a Skill Check involved with a Resistant Maneuver, they additionally have a Bane whenever they would use that Maneuver against an Enemy they previously Targeted with it.

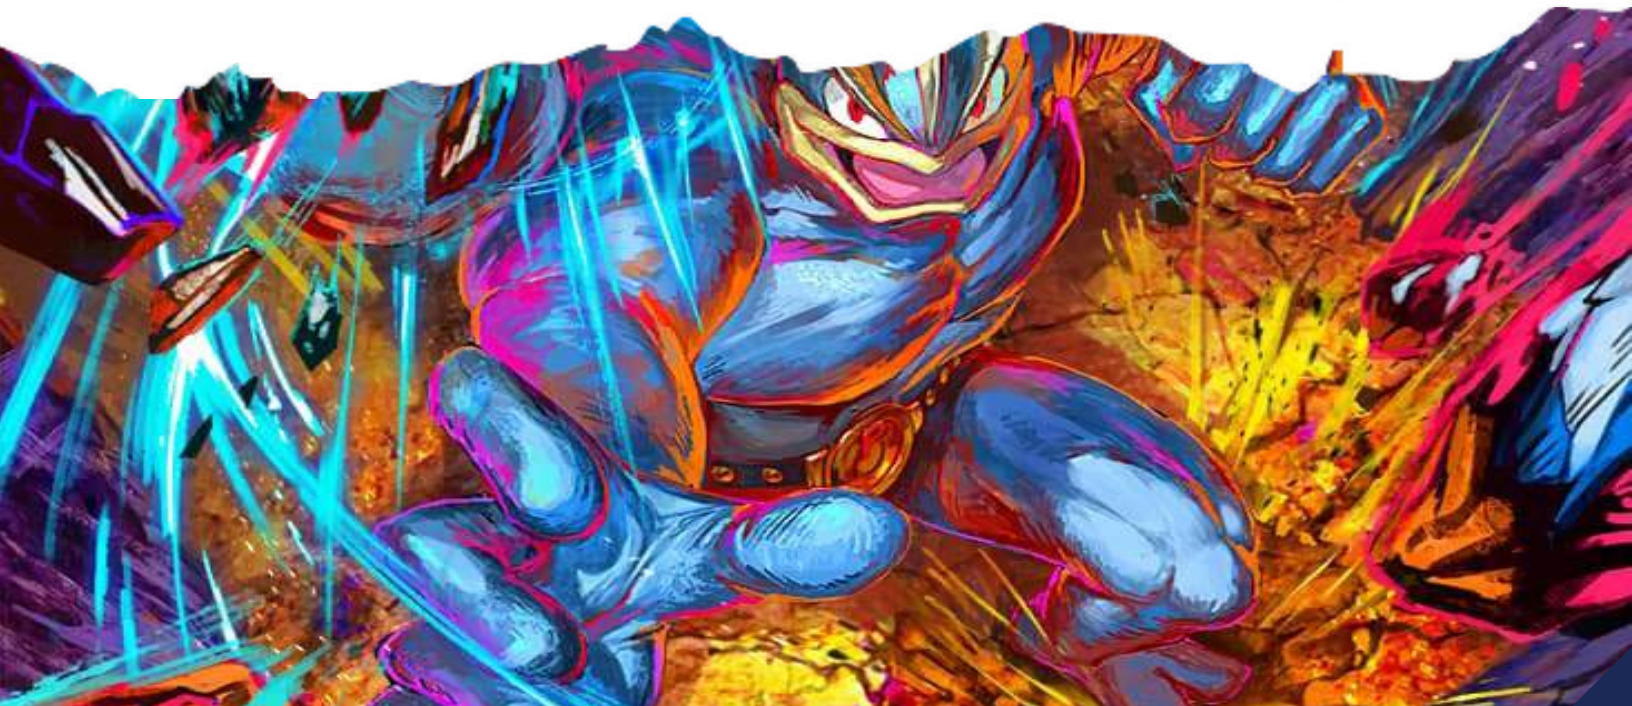

This is meant to display a Combatant's adaptation to combat tactics used against them and prevent them for falling for the same tricks.

Example (Resistant Keyword): If a Jynx uses an Intrigue Maneuver against a Machop and it succeeds, they become Entranced. 2 Rounds later the Jynx's Ally, Salazzle, uses the Intrigue Maneuver against them again. The Machop has a Boon to their Focus or Intuition Check. The Salazzle failed their Intrigue Maneuver this time. During the next round, the Salazzle tries to use it again against the Machop. This time the Machop has a Boon and the Salazzle has a Bane. If they fail it again. The machop will not be swayed by their chemical wiles, as they've seen it used before.

GM Note

You do not need to be literal with the Effects listed and depending on the context you may allow different Skills to be used or different Effects to apply, just don't let your players abuse this for better effects or better outcomes, do what makes sense.

For example, a ruffian that is devilishly handsome may be able to use the Intrigue Maneuver with their Intimidate Skill, however it may change the skill roll. If the Target would be attracted by their intimidating aura, it could work as normal, however if they're instead unaffected by that type of demeanor, they may gain +1d6 to their opposed check.

BOLSTER MANEUVERS

Defend

Action: Swift Action, Reaction or Movement

Target: An Adjacent Ally

Effect: Until the start of your next Turn, while you're Adjacent to them, if the chosen Ally were to be Targeted by a 1-Target Attack, you become the Target instead.

Disengage

Action: Movement

Effect: You Slide 1m.

Help

Action: Swift

Target: An Adjacent Ally

Effect: The Target may immediately make a Save Check to cure an Affliction as if it were the end of their Turn. The User cannot perform this Maneuver if they used a Damaging Attack this Turn and cannot use one for the rest of the Turn.

Hide

Action: Movement

Effect: Until the start of your next Turn, all Cover Terrain you're Adjacent to is treated as Blocking Terrain and all Rough Terrain you're standing in has its penalties double against Attackers.

Intercept

Action: Reaction

Trigger: An Ally within 3m would be hit by an Enemy's Attack that doesn't have the Social or Sureshot Keyword

Effect: As a Free Action, you move until you reach the space the Ally is in, or until you're in a space that is directly between the source of the Attack and the Targeted Ally. If you reach the space the Ally is in, they are Slid into an Adjacent space, then you move into the Space they were in. You are then hit by the Triggering Attack as if you were the original Target and it becomes one damage step more effective (Max 1.5x) or if you were Immune to the Triggering Attack, it is treated as Resisted instead. The Effectiveness does not increase if you expend a Standard Action.

Intercept Notes

» If an Attack is an Area of Effect, the Ally that was intercepted for resists it by an additional Damage Step if they would still be in Range.

Jump

Action: Movement

Effect: Move up to half your Movement Value in a straight line (diagonals are allowed), ignoring Effects or Penalties on Grounded Terrain that you moved over, including Hazards (Some Hazards like Smoke or Smog may still apply per GM Discretion).

Respite

Action: Full

Effect: This maneuver cannot be used if there are any Enemies within 2m of the user. The user chooses two effects from the list below to apply, then all of their Stats with Positive CS are set to their Default Value. You may choose the same effect twice if desired.

- » All of their Negative Combat Stages are reset to their Default Value.
- » The user becomes cured of a Status Affliction.
- » The user becomes cured of a Condition that isn't granted by an Affliction they have.
- » The user may remove a Coat or Mark affecting them.

Sprint

Action: Standard or Swift

Effect: As a Standard Action, your Movement Value is doubled this Turn. As a Swift Action, your Movement Value is increased by +2 this Turn.

Riposte

Action: Standard + Reaction

AC: 4

Range: Field

Trigger: You or an Ally would be damaged by a 1-Target, Line or Blast Attack without the Sureshot Keyword

Effect: Choose a Damaging Attack and expend a usage of its Frequency, then perform this Maneuver (The Attack is not considered to be used, ignoring its effects). If it hits, perform a Damage Roll as if you used the chosen Attack against the Triggering Enemy (Do not apply Damage Calculations). Subtract your Damage Roll result from the Triggering Attack's Damage Roll (Before Damage Calculations) and if it results in 0 or below, the Triggering Attack instead misses all Targets and they are not affected by any of the Attack's Effects. If the result is still positive it is the new Damage Roll for the Triggering Attack. If a Combatant hits this Maneuver, they cannot perform it for the rest of the Scene.

Riposte Notes

This is your classic Beam Struggle! • • • • •

- » If the chosen Attack is Melee, the Combatant performing this Maneuver must be between the source of the Attack and the Target(s)
- » If the Triggering Attack is Melee or Close Blast, the Combatant that uses the Riposte Maneuver must be Adjacent to them. If it is Blast or Line, the chosen Attack must be Blast or Line and Super Effective.
- » The chosen Attack must be either Neutral or Super Effective against the Type of the Triggering Attack.
- » If the Accuracy Roll for Riposte resulted in a Natural 20 and/or the chosen Attack was Super Effective, multiply your Damage Roll by 1.5x. Then the Triggering Attacker loses Hit Points equal to the difference in damage rolls if yours would be higher. Hit Points lost this way cannot exceed more than 3 Ticks worth of their Hit Points.

MANIPULATE MANEUVERS

Analyze

Action: Swift

AC: None

Range: 6, 1 Target

Effect: Select a specific facet about the Target you wish to analyze and gain intel in. The GM will tell you any information you can surmise about the Target and the chosen facet. The GM may also request you make a Skill Check to gain more information or gain any information about the Target. If the facet cannot be ascertained by any means and you are unable to Analyze a Target, this Maneuver cannot be used and must be stated upon declaration.

Note: This Maneuver should only be used to gain intel for combat relevant Information. If they're gaining minor information, you may instead upgrade this to a Free Action

Analyze Maneuver Examples

Ex: A Player makes a Tech Edu Check to find the weak point for a mechanical tyrannitar boss.

Ex: A Player makes an Occult Edu or Intuition Check to find out information about a weird aura surrounding a cultist Trainer.

Ex: A Player makes an Intuition or Perception Skill opposed by a Stealth Check after noticing a Trainer holding his hand in his pocket, looking like they're holding something.

Ex: A Player makes a Pokemon Education Check to find out the Defensive Stat Value of an Aggron or what Ability a Vileplume took. They saw some haze around the Vileplume and noticed it took Hay Fever.

Distract

Action: Swift

AC: 6

Range: 6, 1 Target

Effect: Make a Guile or Stealth Check opposed by the Target's Focus or Perception. If you win, the Target becomes Provoked by you or Dazed. Either of these Effects last until the end of their next Turn. **Resistant.**

Intrigue

Action: Swift

AC: 6

Range: 6, 1 Target

Effect: Make a Charm or Command Check opposed by the Target's Focus or Intuition. If you win, the Target becomes Entranced until the end of their next Turn. **Resistant.**

Provoke

Action: Swift

AC: 2

Range: 6, 1 Target

Effect: The Target must make a Tough CR (3) Focus Check. On a Failure, they're Provoked by you until the end of their next Turn. If you've failed this Maneuver against the Target this Scene, the CR becomes (2) instead. **Resistant.**

Terrorize

Action: Swift

AC: 6

Range: 6, 1 Target

Effect: Make an Command or Intimidate Check opposed by the Target's Intimidate or Focus. If you win, the Target becomes Suppressed until the end of their next Turn. **Resistant.**

TACTIC MANEUVERS

Attack of Opportunity

Action: Reaction

Trigger: An Adjacent Enemy uses a Ranged Attack on a Combatant that isn't Adjacent to them; or an Adjacent Enemy willingly moves into a Space that isn't Adjacent to you.

Effect: You may use a Basic Attack against the Triggering Enemy as a Free Action.

Disarm

Action: Swift

AC: 4

Range: Melee, 1 Target

Effect: You and the Target make opposed Combat or Stealth Checks. If you win, choose an Item in their Inventory Slot to be removed from their Inventory and dropped to the ground. Alternatively you may choose an Item in their Equipment Slot to become Impaired. While Impaired, they cannot benefit from the Item's Effects until the end of their next Turn or unless they use a Swift Action on their Turn to remove the Impaired condition. **Resistant.**

Hinder

Action: Swift

AC: 4

Range: Melee, 1 Target

Effect: You and the Target make opposed Athletics or Combat Checks. If you win, the Target becomes Vulnerable against the next Attack that targets them. **Resistant.**

Push

Action: Swift or Movement

AC: 2

Range: Melee, 1 Target

Effect: You and the Target make opposed Athletics or Combat Checks. If you win, the Target Slides up to X meters away from you, where X is the higher of your Athletics or Combat Rank subtracted by their Weight Class. **Resistant.**

Grapple

Action: Standard

AC: None

Range: Melee, 1 Target, Sureshot

Effect: You and the Target make opposed Athletics or Combat Checks as a Grapple Check. If you win, you both become Grappled and you gain Dominance in the Grapple. Combatants with Teleporter Speed or the Phasing Capability cannot become Grappled. Combatants that are Grappled are Vulnerable, cannot take Movement Actions (Not listed below) and are Provoked by the Combatant they're Grappled with. See the notes below for further info. **Resistant.**

Grapple Notes

» A Combatant with Dominance in the Grapple, on their Turn, may perform any of the following alongside normal legal Actions:

Drag: As a Movement Action, they may Shift and Slide the Combatant they're grappling into an Adjacent space. Their Movement Value is lowered by the other grappler's Weight Class

Strike: As a Full Action, they may perform an At-Will or EOT Attack against the other Grappler as if it had the Sureshot Keyword.

Secure: As a Shift or Swift Action, they gain a Boon to their next Grapple Check. As a Standard, the opposer also gets a Bane to their Opposed Check

Cease: As a Free Action they may end the Grapple.

» At the start of the Grappler's Turn who doesn't have Dominance, as a Standard Action, they may repeat the opposed Grapple Check. The winner gains Dominance in the Grapple and may choose to continue or end it.

» A Combatant who is at least two Size Categories larger than a Grapple Initiator automatically succeeds Grapple Checks

Throw

Action: Standard

AC: 4

Range: See Effect

Effect: You throw an Item with the [Throwable] Keyword at a Target within Range. The Range of the Throw Maneuver is equal to 4 plus your Athletics Rank. If the Target is hit, the Item's Effects are applied to the Target. If the Target is Adjacent to the User, this gains the Sureshot Keyword.

Trip

Action: Standard

AC: 4

Range: Melee, 1 Target

Effect: You and the Target make opposed Combat or Acrobatics Checks. If you win, the Target becomes Tripped. **Resistant.**

Basic Orders

Orders are particular actions that can be shouted by a Trainer to issue a command to their allies. Similar to **Maneuvers**, all Trainers have access to using Orders, however some Trainers gain specific Orders through Features, specified by the [Order] tag, or as Rewards from bonding with a Pokemon or their Team. Additionally, Commander and the classes that branch off of it specialize in commanding others and may perform Orders better than other Trainers.

Basic Orders are **always use a Reaction** (Unless otherwise specified) and each Basic Order will have a different circumstance on when it can be used. In order for an Order to be used, one of the Trigger Conditions must be met and the Target(s) must be able to hear you communicate their verbal command, usually being within 10m. **Additionally, Orders do not stack**, so multiple Trainers cannot use an Order at the same time on the same Target or a Target cannot be affected by they same Order multiple times. This means you cannot have 3 Trainers all shout at a Pokemon to dodge with the Reactive Order to stack the effects.

Design Note: Orders are meant to be mechanical ways to show the effects of a Trainer's verbal commands on their Pokemon. Basic Orders are meant to emulate simple commands like "Dodge it!" or "C'mon Psyduck snap out of it!", when it's confused. Improvised Orders are meant to enable a rules-lite type of gameplay that allows Trainers to be flexible when commanding their Pokemon. Similar to Maneuvers, these are generic actions that can be performed so all Trainers can have a wide array of options to perform on their turn regardless of class choices.

Basic Order Examples

Ex 1: A Level 3 Trainer sees their Burmy being hit by an Attack. They shout to them "Hang in there Burmy just a bit longer!", and use the effect of Defensive Order, granting it 5 Damage Reduction against it as its Tier Value.

Ex 2: A Level 7 Trainer's Psyduck is confused and suffering. A Trainer shouts at it, "Snap out of it Psyduck!". It'll use the Effect of Inspiring Order, granting it +2 to Save Checks as its Tier Level.

Basic Order List

Defensive Order

Trigger: Your Pokemon is hit by a Damaging Attack

Effect: The Target gains Damage Reduction equal to your Tier Value against the Triggering Attack.

Energetic Order

Trigger: Your Pokemon hits a Damaging Attack

Effect: The Target gains a bonus to the Triggering Attack's Damage Roll equal to your Tier Value.

Inspiring Order

Trigger: Your Pokemon would perform an Attack or Save Check

Effect: The Target gains a modifier to the Triggering Accuracy Check or Save Check equal to your Tier Level.

Reactive Order

Trigger: Your Pokemon is Targeted by an Attack or Maneuver before the Accuracy Check

Effect: The Target gains Evasion equal to your Tier Level against the Triggering Attack or Maneuver

Tactical Order

Trigger: Your Pokemon uses an Attack

Effect: The Target gains a modifier to the Triggering Attack's Effect Range or Critical Hit Range equal to your Tier Level.

Improvised Orders

If desired, your GM can also create custom Effects based on the fluff of your command known as an **Improvised Order**. Performing an Improvised Order can allow you to affect the target in unique ways not listed as a Basic Order, nor does it need a Trigger, **however it requires a Skill Check of some kind** from either the **Order Recipient, Enemy Target or User** to do so based on what they want to occur and the effects must be balanced around a Swift Action. Improvised Orders can also be used as Standard Actions to have their effects be stronger. If the Skill Check involved fails, the Order is deemed ineffective and the expended action is still used.

GM Note: Improvised Orders can allow for Trainers to basically do anything in a rules lite format so ensure that this is only used to enable cool moments rather than grant them more “pseudo-features” they can fall back on for power. When a Trainer asks, can I have my Pokemon do this, this is the arena to do so with “Playground rules”. These Orders should only be done in the moment to enable a Trainer and their Pokemon to do something normally outside of their mechanical limits but makes sense thematically. Typically these effects shouldn’t be repeated so they’re used every fight, however some Improvised Orders can be granted as rewards. When determining Order Effects, make sure the Action cost or Skill TN is appropriate.

Example (Pokemon Check): A Team Rocket grunt is running away from a Scene and a Trainer shouts for their Mightyena to “Quick, don’t let them escape!”. Nothing on the standard list would let them do so, so they use an Improvised Order. The GM requests that **Mightyena make a Standard CR (2) Acrobatics Check** or the **user makes a Tough CR (3) Command Check**. Upon passing, the GM allows the effect of the Order to be “**The Target may perform a Damaging Attack as a Priority (Advanced) Action and may spend their Movement Action to do so**”, and the Order costs a Reaction from the Trainer.

Example (Enemy Check): A Trainer quickly commands their Venusaur, “Quick, bind them with your vines so they can’t escape!” The GM allows this as a Swift Action to “**Target an Enemy within 3m of Venusaur to become Trapped on a failed Acrobatics Check**”. The Venusaur sends out ivy towards a **Hitmonlee who makes an Acrobatics Check with a CR of Standard (2)**. They succeed and jump out of the way. Over the course of the Campaign once their bond with Venusaur improves, the GM grants them an Order that lets them repeat this effect.

Don’t let Players: Make up overpowered effects for little to no action cost or exchanging penalty.

Do let Players: Use fluff to enable utility that a Pokemon otherwise wouldn’t have access to.

Capabilities

Capabilities are assigned to and can be gained by each Trainer and Pokemon to denote what is special about them. If a Pokemon like Gastly has the ability to phase through walls, it could have the Phaser Capability. Capabilities can also be gained, such as if a Trainer is wearing a Winter Coat, they could temporarily gain the Naturewalk (Tundra) Capability. Capabilities are described in the next few pages and broken down into 3 sections.

Movement Capabilities- There are many Pokemon that can move in unique ways! Movement Capabilities describe the ways in which Pokemon can interact with the environment and can deviate their movement when using Movement Actions. This can include Pokemon that are faster, can teleport, can swim or jump higher, etc.

Combat Capabilities- Combat Capabilities are effects that can primarily influence battle such as being able to see in the night, change forms mid battle or blend in with the shadows. They still can have narrative utility but their primary effects can assist in combat.

Narrative Capabilities- These Capabilities have little to no combat utility, primarily serving as narrative tools. This can include seeing aura, seeing souls, being able to make no noise or be immune to mind invasiveness!

Note: All numbers on a Capability are subject to GM Discretion and should only be followed verbatim on a standard usage. If a Combatant is exceptionally weaker or stronger than the standard norm, you may adjust the numbers in a Capability. A Weaker example could be a new Aura Guardian who needs to pass a Standard CR (2) Focus Check in order to see the aura of a Pokemon, as they haven't trained with it to the point where it becomes Intuitive. A Stronger example could be that a Trainer made a bond with Lugia and Lugia's Telepathy ignores the 10m Range and they can always communicate provided they're in the same region

MOVEMENT CAPABILITIES

Quick- The user's Movement Value is instead 8m.

Slow- The user's Movement Value is instead 4m.

Burrower- As a Swift Action, when declaring Movement as a Movement Action, select a Space in which you could reach via movement. The user automatically appears in that Space. This Movement cannot Trigger Reactions or Attacks of Opportunity. This may only be used if the spaces you travel through are connected by ground or breakable in which you can dig a tunnel. For example, a Diglett cannot use this Capability while they're suspended on a platform in the air since there is no connected ground or if they're in a building with metal tiling.

Climber- The user may climb Vertical Surfaces, Slopes or Cliffs without any Movement impairment or without needing to make any Skill Checks. If desired, the user may end their Movement Actions while sticking to a vertical surface, provided they're less than 4m up in the air, such as climbing a Tree without Skill Checks required.

Flier- As a Swift Action, when declaring Movement, the user may become Airborne and use Movement to move up the Z-Axis. The user cannot exceed 4m in the air this way. While Airborne, the user ignores the Effects of any Hazard, Terrain Effects that apply to non-Airborne Combatants, or Movement Penalties as a result of Terrain. At the end of their Turn, they must spend 1 SP or else they are no longer Airborne. Pokemon with the Flier Capability that are Dragon or Flying Type or with GM permission may exceed the 4m restriction while outside of combat. All Creatures with the Flier Capability are also considered to have the Glider Capability.

Glider- The user is Immune to falling damage unless their method of gliding is restricted somehow.

Grounded- The user cannot perform the Jump Maneuver.

Jumper- When using the Jump Maneuver you may instead move up to your whole Movement Value instead of half.

Phaser - As a Swift Action, when declaring Movement, the user may move through spaces occupied by Blocking Terrain and may treat Occupied Spaces as if they were not Slow Terrain. The user cannot end in a space with Blocking Terrain in it. This Capability cannot be used if the User is suffering from a Mental Affliction, unless the user spends 1 SP per Mental Affliction they have

Swimmer - The user treats Ocean Terrain as if it were Basic Terrain instead of Slow Terrain when in a Space affected by Water or in an Underwater affected Area.

Teleporter - As a Swift + Movement Action, select a Space that is a number of meters equal to or less than your Movement Value. The user automatically appears in that Space, ignoring all spaces between. This Movement cannot Trigger Reactions. The user can only select a space by which they have line of sight and must end Teleporter Movement touching a surface (They cannot land in the middle of the air unless they have the Flier Capability). This Capability cannot be used if the User is suffering from a Mental Affliction unless the user spends 1 SP per Mental Affliction they have.

COMBAT CAPABILITIES

Blender - The user is able to blend their body with their immediate surroundings through some form of camouflage method or extreme stealth. The user may use the Hide Capability as a Swift Action if desired. The user may gain a Boon to Stealth Checks if they're able to blend in with the surroundings.

Blindsense - The user cannot be Blinded and gains the Darkvision Capability. Blindsense may have different limitations or specifications depending on the user, such as increased hearing, supernatural smell, awareness of the environment or echolocation. If it were echolocation for example, this capability could be disabled in a crowded area. At the cost of 1 SP, the user may enhance one of their senses that are affected by this capability for up to 30 minutes. This grants the user a Boon to any Perception or Focus Check related to that sense

Darkvision - The user ignores Accuracy Penalties due to Darkness and can see through it as if it were bright.

Form Change - The user is capable of changing forms through an Attack, Ability or other effect. Keep a different Character Sheet for each of the user's forms. All Forms must have the same total HP Stat Value and if anything (such as an Ability) alters the user's base stats, all forms are affected in the same way.

Groundshaper - As a Swift Action, the user can transform the terrain around them in order to create Slow Terrain, Rough Terrain, or Basic Terrain. When this Capability is used, they may select any number of spaces within 2m of the user to become affected. Spaces can have different types of alterations applied to them during one instance, such as 3 Spaces becoming Basic Terrain and 4 becoming Rough Terrain. At the cost of 1 SP, the user may also select any number of spaces within a Zone of 10, Ranged Blast 3. At the cost of 2 SP, the user may also create Blocking Terrain that is [Breakable- Fragile]

Invisibility - The user may turn invisible as a Swift + Movement Action. They cannot perform Actions while Invisible other than becoming Visible once more as a Free Action or using Actions to move. While Invisible, Enemies have a -4 penalty on Accuracy Rolls against them and a Bane to Perception Checks against them. Enemies ignore the Provoked Condition if they're Provoked by you and you're currently Invisible. If anything would break their concentration while Invisible, they will need to pass a Focus Check or pay 1 SP or else they become Visible.

Living Weapon - The user can possess a Weapon owned by its Trainer as an Extended Action. While possessing a Weapon, it takes the form of that Weapon. If a possessed Weapon is equipped by a Trainer, the Pokemon is not considered part of the Party and cannot be used. The Weapon is also treated as normal, but their Damaging Weapon Attacks are Ghost Type instead of Normal.

Mountable - Any Creature is able to mount or unmount this Willing Active Pokemon as a Swift Action while Adjacent to the User. While a Creature is Mounted, whenever they perform a Movement Action, they are treated as having the mounted Pokemon's Movement Value and Movement Capabilities. Whenever either the User or the Mounted Creature would perform a Movement Action, both Combatants move. Lastly, both Combatants are treated as Occupying the same Space. If either the Mounted Creature or the Mounted Pokemon would be Slid, both Combatants move the required distance. If the Mounting Creature or Mounted Pokemon would trigger an Attack of Opportunity via movement, the attacking Enemy may choose either Combatant to Attack, but not both.

Naturewalk (X) - Naturewalk is always listed with Terrain types in parentheses, such as Naturewalk (Forest and Grassland). Users ignore the penalties of Slowed and Rough Terrain within their listed Terrain.

The possible Terrains by default include: Grasslands, Forest, Wetlands, Tundra, Mountain, Cave, Desert, Ocean, Urban, Space

Reach - A User has the Range of their Melee Attacks and Maneuvers (Excluding Attack of Opportunity) increased based on their size category; Small and Medium Pokémon may make Melee attacks from up to 2 meters away, and Large and bigger Pokémon may make Melee attacks from up to 3 meters away.

Shadow Meld - As a Standard Action or Extended Action, the user can merge with a Shadow casted by an Object or Creature and become Untargetable. If the Object or Creature faints or is destroyed, the user no longer becomes Untargetable. While Untargetable, they cannot perform Actions other than losing the Untargetable Condition. While Untargetable, they follow the Object whose Shadow they've merged with and are always considered Adjacent to them. They also cannot be noticed except with a Severe CR (4) Perception or Intuition Check. The user may re-emerge from the Shadow as a Movement Action, losing the Untargetable Condition and appearing in a Space that is Adjacent to the Object whose Shadow they merged with. If you're outside of Combat, you may spend up to 10 minutes in a shadow, but need to spend 1 SP for every additional hour spent in the shadow.

Telekinetic - The user can lift objects within 10m using their Mind and utilizing the Focus Skill instead of Athletics to determine their Power Rank. When lifting objects this way, the user may expend 1 SP to gain +2 Power for an Hour. If the user performs any of the following Maneuvers, its Range changes to 6, 1 Target and Focus must be used for the user's Opposed Checks instead of listed Skills: Disarm, Hinder, Push, Trip.

Threaded - The user can form String-Like Threads or Vines which function as appendages. The Power Rank of these appendages have strength equal to the number of dice they roll for Focus plus half of their Power Rank. The user may perform Tactic Maneuvers (Excluding Throw or Attack of Opportunity) as if their range was 5, 1 Target and when performing the Push Maneuver this way, they instead slide the Target towards the user.

Truant - The User's Damaging Attacks take a Full Action instead of a Standard Action.

Underdog - These users are Pokémon that have a Base Stat total of 45 or less. Some exceptions apply.

Wallshaper - The user can create Illusionary or Invisible walls within 5m of them while concentrating as a Standard or Extended Action. If used as a Standard Action, the wall occupies up to 4 unoccupied spaces that are connected, If used as an Extended Action it can create up to 10m of wall that are connected. This Wall is treated as Blocking Terrain and is Immune to all Physical Damage. Creatures with a Weight Class of 4 or more cannot stand on a Wall created this way and cause it to be destroyed if they do so. The User may allow creatures to phase through this wall as if it weren't Blocking Terrain whenever they desire.

Wielder (X) - The user may be given one [Equipment - Weapon] Item to hold as if it had the [Pokemon] tag. They add the associated Weapon Attacks to their Attack List. The Wielding Pokemon cannot benefit from any Weapon Effects other than its Weapon Keywords. Wielder will often have a Weapon Type or Category listed in parenthesis next to it, which denotes the only type of Weapons it can equip. If it says Wielder (Arcane), they cannot equip a martial weapon, for example. As a Swift Action, the Wielder can use any Damaging Attack as if it were a Weapon Attack, but its range is replaced with the Weapons' Range.

NARRATIVE CAPABILITIES

Alluring - The user is considered to smell very nice or they can expel a sweet smelling substance.

Amorphous - The user has an inconsistent body shape. They can flatten and reform like putty and stretch their body material and condense it. They're able to shape their body by squeezing through tight spaces or doors.

Aura Reader - The user can read the Aura of other living beings. Aura conveys two pieces of information. First, its hue or color reveals something about the personality of the Target. The hue of an Aura may change over time if an individual undergoes significant changes in personality or worldview. Second, Aura also appears brighten or darkened at times. Bright aura can reflect good mood or intentions, whereas dark aura can reflect a sour mood or deceptive or negative intentions. An Intuition or Perception Check may be required for a clearer view of aura but the longer the user is exposed to the target the more accurate their assessment of this info may be.

Breathless - The user does not need to breathe and cannot suffocate.

Chilled - The user emits cold. Depending on the size of the Chilled Source, the size of the cold differs. If it's a Small Source, 1m. If Medium, 3m. If Large, 5m. Spaces within this range are colder, resulting in the user and Combatants in this range ignoring the effects of the Harsh Heat Environmental Modifier.

Dream Reader - The user can view dreams of sleeping creatures they are adjacent to. At the cost of 1 SP, you may either shape the dreams of a sleeping creature you have physical contact with, or you may project their dreams for those around to see in an illusory form.

Dead Silent - The user does not noticeably breathe or and can control the rate of their heartbeat (Or not have one at all). The user does not make noise when they move unless they want to, provided they can concentrate.

Empath - The user can sense the surface level emotions and feelings of others around them within a 10m range, even if they don't show any body language to indicate those emotions that could be determined in an Intuition Check. At the cost of 1 SP, the user may perform a Focus Check to target a creature within 5m and sense any deeper emotions beyond their surface level, with the Challenge Rating being based on how guarded the Target is with their emotions.

Engine - The user has a special relation to motors and vehicles. They can merge with vehicles or motors and treat it as their new body. If used by a Varoom or Revavroom, they may gain an Attack or Capabilities depending on the type of motor or vehicle.

Gilled - The user does not take Suffocation Damage when acting in Underwater Areas.

Glow - The user emits light. Depending on the size of the Glow Source, the size of the light differs. If its a Small Source, 1m. If Medium, 3m. If Large, 5m. Spaces within this range are Illuminated, resulting in the user and Combatants in this range ignoring the effects of the Low Lighting Environmental Modifier.

Heater - The user emits heat. Depending on the size of the Heater Source, the size of the heat differs. If its a Small Source, 1m. If Medium, 3m. If Large, 5m. Spaces within this range are warmed, resulting in the user and Combatants in this range ignoring the effects of the Harsh Cold Environmental Modifier.

Illusionist - The user may create minor visual Illusions as a Swift or Extended Action. These Illusions cannot be more than half a meter in any dimension and produce no sensory sensations outside of sight. Any physical contact noticeably disrupts an illusion, otherwise they appear life-like and can be made to move. Illusions cannot move further than 10m from the user. Any one of these restrictions may be ignored at the cost of 3 SP minus your Tier Level, but when doing so, you must hold your full concentration otherwise it will be disrupted.

Magnetic - The user can lightly manipulate magnetic fields. With this, they can repel or attract iron and/or steel, holding it to their body or pushing it away. Through this magnetic manipulation, they can also sense magnetic fields, discern magnetic north and sense disruptions within magnetic fields within 50m. Users with the Magnetic Capability may communicate with other Magnetic users as if they each had the Telepath Capability.

Mender - The user can create something that has medicinal properties using its body. This Capability has the same effects as a First Aid Kit (Item).

Mindlock - The user gains a Boon to all Opposed Focus Checks. You are automatically aware of all attempted uses of the below Capabilities against you. If you succeed on an Opposed Focus Check against the initiator of said attempt, you discern who attempted to use the Capability, roughly where they are (a direction and "near" or "far"), and are immune to this attempt and any further attempts to use these Capabilities by said initiator until the end of the Scene. The affected capabilities are Aura Reader, Dream Reader, Empath, Mind Weaver, Soul Seer, and Telepath, as well as Channeling and any other effects targeting your Mind or Spirit.

Mind Weaver - If the user is touching a Creature's head, they may perform opposing Focus Checks, unless willing. On a success, you can view all of their Memories within the past 24 hours. You may choose to erase any Memories within this span. If you succeed by at least 2+, spend 2 SP, or if you spend a Downtime Action (1 Hour equivalent), you may view Memories that span a month ago and erase any of those (Or longer at GM Discretion). If you fail, this Effect does not apply and you have a Bane to all future attempts with that Creature.

Note: Please ensure that your Players are okay with this being used on them before you plan on doing so. Manipulating a Player Character's Memory is intrusive and be a boundary for some.

Pack Mon - If the user is a Trainer, they have a Boon for all Command Checks involving a Pokemon. If the user is a Pokemon, whenever a Skill Check for the following Skills is used against them, it has a Boon if the user doesn't have an associated leader and it has a Bane if they have a leader they respect. Command, Intimidate, Charm, Guile.

Premonition - The User can sense when a disastrous event would occur within the near future. This can either be an innate feeling or through some sort of ritual the user performs, and as such may be limited in how much information they can obtain. The further they are away from the source of the event, the more blurry the details are with a chance at inaccuracies or not sensing. If the event would occur within an Encounter, they may get a brief glimpse, such as an Entei they're fighting causing a volcanic eruption. This would occur one Round before the Event is expected to occur. The extent of the Premonition is limited to the Pokemon's method of future seering, such as Gothitelle only being able to predict the future through the star alignment or Absol being able to sense natural disasters with its horn. The user may expend SP to gain more clarity in one of their visions, with the level of detail and accuracy increasing with each expended SP.

Repulsive - The user is considered to smell very bad or they can expel a nauseous smelling substance.

Shapeshifter - The User can change their shape at will, taking on different forms as an Extended or Standard Action. When using this Capability, the user cannot increase or decrease its total mass by more than 50%, and they cannot replicate complex machines such as computers or phones. They may take on the appearance of these devices, but they will appear simplified in comparison and be non-functional. They can, however, transform into other moving forms such as acting as someone's prosthetic limb, a living lever or pulley system, or a Pokémon comparable in size. Note in this last case that the Shapeshifter doesn't gain any qualities of that Pokémon without actually using the Attack Transform. Anyone closely examining a Shapeshifter User may determine its true nature with a Perception Check opposed by the User's Guile or Stealth.

Soul Seer - The User can see the souls of creatures around them. The lighter the soul is then the more likely they are to do good and the more darkness that is in the soul means the more likely someone is to do something bad. When a soul is smaller that means the person is more injured, and the opposite is true the larger it is. If the soul has cracks on it then that means the person has suffered a traumatic event and they will only heal once those events have been overcome. Upon first view of a soul it normally starts foggy, but after a minute it takes shape and the user

may determine the former details. If the user is more than 5m away from their Target, they cannot discern the nature of a soul.

Telepath - The user may project their thoughts to the minds of others and read the surface thoughts of others within 10m. If the mind being read is unwilling, they must make an Opposed Focus Check in order to succeed. If the Target does not pass a Tough CR (3) Intuition Check and does not see the user, they are unaware of the Telepath Capability being used and cannot oppose it. The user can only focus on one mind at a time. If a Telepath attempt fails an opposed Check, they cannot attempt to read their mind for another Hour. When the user successfully reads a mind, they may choose to expend SP equal to 3 minus their Tier Level, then make a Focus Check, with the CR depending on the secrecy of the thoughts or the mental fortitude of the Target. On a success, the user will be able to read their deeper thoughts beyond surface level

Thermal Vision - When focusing for at least a Minute, they can switch their vision to Infrared, sensing infrared radiation around them. When observing the world this way, objects with higher sources of heat will stand out in shades of red, while objects that are colder will stand out in shades of blue.

Tremorsense - The user can sense the Location, Size and Shape of Objects in or on the ground within 10m of them. If the surface of the ground isn't earth-like (Such as Mud or Metal), a Standard CR (2) Focus or Intuition Check may be required to use this Capability.

Tracker - The user has a strong sense of smell that they can use to follow other Pokémon or People. If the user has direct exposure to a scent of their Target or an object they've had contact with, it requires a Standard CR (2) Perception Check to know the direction of where they are or where they've been. The user can also recall past scents they've had exposure to, which is a Severe CR (4) Perception Check.

True Sight - The user can see through Illusions and Invisibility as if their form were visible but ephemeral and translucent.

Wired - The user has a special relation to electronic devices. They can enter machines and travel through connected electronics through any cords that connect them instantly. If used by a Rotom, Rotom may take control of the machine from within, gaining an Attack chosen by your GM based on the machine

X-Ray Vision - When focusing for at least a Minute, the user may see what lays beyond Blocking Terrain in the form of blurry shapes. The maximum distance this Capability can allow you to see through is within 2m of you, everything beyond that range becomes distorted.

Status Afflictions

Status Afflictions are divided into 2 Categories, **Physical and Mental Afflictions**. **Physical Afflictions** have a physical detriment that usually tends to inflict damage over time. **Mental Afflictions** tend to result in more debuffs compared to inflicting damage and deal with the psyche of the Combatant.

While they don't have distinct differences, there are some Abilities or Effects that can only heal a certain type of Affliction or be better at curing one category. Unlike the video games, **there is no limit to the number of Status Afflictions that a single target can have**. The next few pages will list all of the Status Afflictions and Conditions, along with their effects which are granted to the Combatant while they have the Affliction or Condition.

Removing Afflictions

Afflictions can be removed through any of the following methods:

- » At the end of each Combatant's Turn (After applying Affliction Effects), if they have a Physical or Mental Affliction they may make one **d20 Save Check**. If meet a Target Number of **15**, they are cured of one Affliction.
- » **At the end of a Scene**, all Afflictions are cured.
- » Combatants may perform a **Respite Maneuver** to recover from Status Afflictions they're affected by.

PHYSICAL AFFLICTIONS

○ Burned

- » At the end of a Combatant's Turn they lose a Tick of Hit Points
- » The Combatant's Defense is lowered by -2 CS and cannot be increased while Burned. When Burned is cured, unless the Combatant prevents its CS from being lowered by this Affliction, the Combatant's Defense is raised by +2 CS.
- » Fire Type Pokemon cannot become Burned.

○ Chilled

- » The Combatant gains the Vulnerable and Weakened Condition while they have this Affliction.
- » Ice Type Pokemon cannot become Chilled.

○ Paralyzed

- » The Combatant cannot use Bolster Maneuvers (Excluding Respite) and becomes Vulnerable.
- » The Combatant can only take two Actions per Round
- » Electric Type Pokemon cannot become Paralyzed.

○ Wounded

- » At the end of a Combatant's Turn they lose a Tick of Hit Points, or two if they shifted more than half of their Movement Value.
- » The user cannot restore Hit Points.

○ Poisoned

- » At the end of a Combatant's Turn they lose a Tick of Hit Points.
- » The Combatant's Special Defense is lowered by -2 CS and cannot be increased while Poisoned. When Poisoned is cured, unless the Combatant prevents its CS from being lowered by this Affliction, the Combatant's Special Defense is raised by +2 CS.
- » Poison and Steel Type Pokemon cannot become Poisoned.

○ Slowed

- » The Combatant has their Movement Value halved and cannot apply Speed Evasion.
- » The Combatant cannot perform Reactions

MENTAL AFFLICTIONS

○ Cursed

- » The Combatant has a -3 Penalty to Accuracy, Evasion, and Save Checks.
- » When a Cursed Combatant misses an Attack or fails a Save Check, they lose a Tick of Hit Points (Max: 2 Ticks per Round).

○ Dazed

- » When the Combatant performs an Action (Excluding Free Actions), roll a 1d2. On a 2 they lose a Tick of Hit Points or Two ticks if the Action was an Attack. (Max: 2 Ticks per Round)
- » The Combatant cannot perform Tactics Maneuvers and fails all their Opposed Checks.
- » The Combatant cannot use Actions to cure themselves of any other Affliction.

○ Disabled

- » When a Combatant gains the Disabled Affliction, something is specified or chosen (Usually an Attack or Ability). While a Combatant is Disabled they cannot use or benefit from anything chosen to be Disabled. Instances of the Disabled Affliction may stack and be cured separately depending on the source. Combatants cannot have more than 3 instances of the Disabled at a time.

○ Drowsy

- » While a Combatant is Drowsy, their Damaging Attacks are resisted by an additional damage step.
- » While a Combatant is Drowsy, anything they do requires a Full Action instead of the normal Action cost.

○ Enraged

- » While a Combatant is Enraged, they cannot use their Standard Action for anything other than using a Damaging Attack (Or something that results in a Damaging Attack being used by them) and cannot use Status Attacks
- » When an Enraged Combatant is hit by a Damaging Attack, they become Provoked by the Attacking Combatant. If they are already Provoked, they become Provoked by the new Attacker.

○ Entranced

- » When a Combatant gains the Entranced Affliction, the Combatant who inflicted it becomes their Fixation while Entranced. If their Fixation faints or is recalled, they are cured of this Affliction. You cannot be Provoked by your Fixation unless otherwise specified.
- » The Combatant cannot Target their Fixation with anything unless they're the only possible Enemy to Target.
- » The Combatant's Damaging Attacks are reduced by an additional Damage Step if their Fixation is within 3m of them.

○ Suppressed

- » Whenever a Suppressed Combatant uses an EOT Attack, after Damage Calculations, they become Vulnerable until the end of the next Round.
- » Whenever a Suppressed Combatant uses a Scene or Daily Attack or Ability, after its resolution, they become Vulnerable and Weakened until the end of the next Round.
- » Combatants with a Boss Template are automatically cured of the Suppressed Affliction when they end their last Turn in a Round.

Conditions

Conditions are **not considered Afflictions** but are tracked in a similar manner. Conditions persist for either a **timed duration** or **persist as long as their associated Affliction is still on the combatant**. If a Condition associated with an Affliction or another Condition is cured, it is immediately re-applied if they are still afflicted with the associated Affliction or Condition.

When a Pokemon is recalled, they lose all Conditions they're affected by except Fainted unless it is inflicted by an Affliction they still possess. For example, if a Combatant is Chilled and cures the Vulnerable Condition, it is immediately reapplied because they're still Chilled and are "Vulnerable while Chilled".

Fainted

A Combatant that is at 0 Hit Points or lower is Fainted, or "Knocked Out". Any Static Effects are also disabled while Fainted. The Fainted Condition can only be cured by being 'Revived and then brought above 0 Hit Points'. When a Combatant faints, they are cured of all other Afflictions and Conditions, excluding Fainted, and their Combat Stages are reset to their Default Values. The only action you can take while Fainted on your Turn is to recall or swap Fainted Pokemon you own, or swap yourself out if you're a Pokemon. No other Actions, Abilities or Features may be taken or Triggered while Fainted unless otherwise specified.

Blinded

While Blinded, the affected Combatant has a -6 Penalty to Accuracy Rolls and is Vulnerable. When making a Movement Action to move, they must either move with half of their Movement value or make a Standard CR (2) Acrobatics Check. If Failed, they become Tripped. Combatants with the Blindsight Capability cannot become Blinded.

Marked

An effect that applies the Marked Condition on a Target will specify that Mark's effects. A Combatant can never apply a Mark from the same effect to more than one Combatant at a time unless specified to have multiple Targets. If they apply a Mark to a new target, the old one is removed, unless specified to have multiple Targets. A Combatant can never have more than one of the same type of Mark. If a Marked Combatant is recalled or the applying Combatant Faints, they lose all instances of the Marked Condition.

Vulnerable

While Vulnerable, the affected Combatant cannot apply Evasion against Attacks. This Condition is cured after its listed Duration expires or if its associated Status Affliction no longer would grant it. Combatants with a Boss Template are automatically cured of the Vulnerable Condition at the end of their last Turn in a Round.

Provoked

While a Combatant is Provoked, any Attacks they make that do not include the Provoking Combatant have a penalty of -6 to their Accuracy Roll. While Provoked, a Combatant may not have a total accuracy modifier higher than 0 against Combatants that are not the Provoking Combatant. This Condition is cured if the Provoking Combatant Faints, its associated Status Affliction no longer would grant it, or the Combatant is Provoked by another source. If a Provoking Combatant can no longer be Targeted, the Provoked Combatant ignores the penalties of this Condition until they are Provoked by a different Combatant or the Provoking Combatant becomes Targetable again.

Trapped

While Trapped, the affected Combatant cannot exceed more than 3m away from the Combatant who Trapped them unless the inflictor moves out of this range. If the Afflicted Combatant is a Pokemon, they also cannot be recalled. This Condition is cured if the Combatant that inflicted it Faints, its source is removed, the Inflictor moves out of this Range, or the user Faints.

Tripped

While Tripped, the affected Combatant cannot perform Movement Actions except to cure this Condition and all Accuracy Checks suffer -6 to Accuracy Rolls. While Tripped, the affected Combatant is Vulnerable. This Condition can only be cured when the affected Combatant uses a Movement Action to stand up. If the Combatant is in Slow or Rough Terrain, they also need to use a Swift Action to stand up.

Untargetable

The user cannot be targeted by any Effect (Attacks, Abilities, etc.). You cannot use or benefit from any Effect that would make you Untargetable if you were Untargetable during the previous Round.

Weakened

While Weakened, the affected Combatant has their Damaging Attacks resisted by an additional step and they resist all Attacks one less step (Max Neutral Effectiveness). This Condition is cured after its listed Duration expires or its associated Status Affliction no longer would grant it. Combatants with a Boss Template are automatically cured of the Weakened Condition at the end of their last Turn in a Round.

Fainting

Unlike the default PTU, **PTE does not follow an Injury system**. This is currently being playtested with more restrictive restorative usage but may be changed down the line! By default, whenever a Combatant is reduced to 0 Hit Points, all excess damage is ignored and then they gain the **Fainted Condition**. As a GM, you then determine the conditions of the Fainted Condition, with a few examples listed below.

Non-Lethal Fainted - Non-Lethal Fainting refers to the rules listed in the Fainted Condition verbatim. These combatants are unconscious and no longer relevant on the battlefield, losing their initiative. Combatants fainted this way recover and are revived and set to 1 HP after 1 to 24 Hours without assistance but can be woken up if assisted by another Combatant outside of an Encounter.

Sparring Fainted - If the context of the battle is simply a spar on one or both sides, when a Combatant Faints, they are simply unable to continue fighting and step off the field to general safety. They are still conscious but cannot contribute to the battle, nor do they have the strength to do so, losing their initiative and having all mechanical effects they provide become disabled (Such as static effects where they stand). As a Trainer however, you can still recall and send out Pokemon in your Party as a Free Action as a Trigger when their active Pokemon faints. You however cannot perform other actions while in this state. After the Scene resolves, the Combatant revives and is set to 1 HP.

Lethal Fainted* - This type of fainting will be set up in the Path of Lethality Module

Resting & Recovery

Your Party is looking worse for wear! Your Team has traveled through the forest and taken a bit of damage, so how do you go about recovering those Hit Points? The following ways are all of the ways you can recover Hit Points.

Item Usage - The quickest way to recover hit points is through item usage such as Potions. This takes no time to administer and can even occur during battle! Be wary however as your Inventory is limited and you'll have to prepare for the journeys ahead.

You end a Scene or Excursion - Whenever you have around 30 Minutes to an Hour of time that isn't spent in combat, each Player and Pokemon may recover half of their Max Hit Points.

Resting Period - Whenever your GM determines that your Party is going to sleep and gets a full 6-10 Hours of uninterrupted sleep, they recover all of their Hit Points. If the Sleep was interrupted or it was a napping period of 1-4 Hours, they instead recover only half of their Max Hit Points. This also applies when you're at a campsite while on a Journey.

Medical Facilities - If your Party comes across a medical facility and has more than 30 Minutes of treatment, they recover all of their Hit Points.

Combat Example

The following few pages will be a full example of a combat encounter.

Context

The Party consists of two Trainers, Mirai (F) and Caleb (M). Mirai has a Vulpix and Caleb has a Pawniard. For the sake of a simple combat, Mirai only has Defender Class and a few supporting Features and Caleb has the Dark Specialist & Rogue Class. Let's also say that they're only Level 2 and their Pokemon are Level 10.

I'm not fully statting sheets so the math will be just estimates.

GM: As you all travel up the pathway to the frozen peak, you feel a harsh wind start to pick up. While you were clearly told how cold it would be, you've never experienced it this cold, although that is likely fitting for a place rumored to be the home of Articuno.

After around an hour of hiking, you reach the apex of one of the mountains. You see a large shrine gate up in front of you, covered in snow while this area seems to be heavy covered in spruce trees, small Pokemon scurrying around quick enough to evade your sight, if you weren't so focused to reach the top that is. Though as you get closer to the top, you come across what seem to be a cluster of sentient trees and a small bear that is blue and white in color, seemingly just as freezing as you are.

Caleb: Do I know what those are?

GM: Roll me a Pokemon Education, CR 2.

[Caleb rolls a 4, 6 & 2]

GM: You can easily recognize the tree Pokemon as a Snover, something you've studied when looking into Articuno. The bear however is known as a Cubchoo, a more rare Pokemon in tundras due to them rarely leaving their caves. On 3 Successes, you'd usually know that its mother Beartic is usually not too far away

Mirai: Do they look hostile at all? If a Beartic is nearby we may want to just ignore them.

GM: Gimme an Intuition. CR 3

[Mirai rolls a 6, 4 & 1]

GM: The Snovers look firm in their stance, almost like they're guards for the path. The cubchoo however looks more resolute than cubchoo normally are.

Caleb: That seems odd. With that Poke Edu roll, what would I know about Cubchoo's typical behavior?

GM: You recall that Cubchoo nearly always have a dismissive and passive demeanor due to being protected by their parental figures and if they're ever not around them, they'll be fearful. Cubchoo that don't have authoritative figures tend to be more bold in the wild, as though to prove themselves. Though that is just the standard behavior, you wouldn't assume that it means no Beartic live somewhere in an area like this.

Caleb: "It seems like these guys won't let us pass. Let's skip the pleasantries and knock them aside before any bigger threats come along"

Mirai: "Agreed. If i stay up here any longer my hair is going to freeze solid"

GM: The Pokemon, already weary, sense your hostilities and immediately start to try and drive you off. Time to start combat!

Initiative

Enemies

- Snover 2x
- Cubchoo

Players

- Caleb & Pawniard
- Mirai 1 & Vulpix

Caleb: Pawniard will likely rush in to start the fight

GM: Alright, Initiative will be opposed Pawniard's Acrobatics vs their Intuition.

[The highest success for the GM is 4. Pawniard rolls 3 Successes for their Acrobatics Check]

GM: Tough luck, looks like Cubchoo will get the jump on you guys while Pawniard rushes in. As he does, Cubchoo is going to launch an Ice Shard at you Mirai.

[GM rolls a 14 on a d20 Accuracy Roll]

Mirai: Yep that hits. Mirai is going to hold up her shield as the shard of ice comes at her.

[GM rolls a 27 on a 2d6+8+12 on a Damage Roll]

GM: That'll be 27 Ice Physical Damage.

Mirai: "As she raises her shield, most of it is deflected on the wooden surface but some ice shards scatter and hit her face, making her scoff in annoyance". Damage taken. Not that much

GM: That'll be the end of its Turn.

Caleb: Do you wanna have Vulpix go first before Pawniard? Double effectiveness and all against these Snover.

Mirai: Gladly. "Vulpix, use Ember against that Snover before the stairs!" I'm also going to have her use a Movement Action to gain +2 Accuracy with her Ranger role.

[Mirai rolls a 4 on a d20+2]

Mirai: Does a 4 Hit?

GM: Luckily it only has 2 Special Evasion, hits.

Mirai: Awesome.

[Mirai rolls a 28 on a 2d6+8+10 on a Damage Roll]

GM: Ouch. You see that the snovers don't really take it well as the fire scorches its branches. It's snow catches fire and starts to melt as it looks very annoyed now at you. Are you going to act or pass Mirai?

Mirai: Uhhh, with the way those snovers look I'm going to play defense. I'm going to rush over to vulpix and then use Taunt against one of the Snover. It has sureshot by the way.

GM: Cool, Snover 1 is now Provoked.

Mirai: Gonna use a Provoke Maneuver as well on the second one. "Don't you dare touch her you oversized lumber dudes!"

Caleb: Burned. Literally too.

GM: Alright, roll AC for the Maneuver.

Mirai: The Draw Aggro Feature gives it Sureshot.

GM: That it does, damn. Snover 2 is also Provoked.

Mirai: That'll be it for us.

GM: That leads to the Snovers. Snover 1 is going to huff and scoff at your Taunt, using the Swagger Attack as a Swift Action through Versatile which cures a Mental Affliction, which Provoked becomes because of your Feature. It'll then hold its arm to its mouth and play a melody of a Grasswhistle Attack!

[GM rolls a 9 on a d20 Accuracy Roll]

GM: An 9 hits I assume and it'll make you Drowsy!

Mirai: Damn, it does.

GM: Luckily for you however, these guys aren't that coordinated and being taunted by you makes it a bit irrational. Snover 2 is going to shoot Powder Snow at you and Vulpix!

[GM rolls a 3 on a d20 Accuracy Roll]

GM: It would miss, but you're Vulnerable from being Drowsy so it hits instead!

Mirai: It misses Vulpix though, not even factoring in the -6 Accuracy from Provoked.

[GM rolls a 27 on a 2d6+8+11 on a Damage Roll]

GM: That'll be Ice Special damage.

Mirai: Taken, and she snaps awake from the damage, curing from the Affliction.

GM: And that'll end their Turns. Caleb is up.

Caleb: Cool, Cool. Pawniard is going to swing back towards the Snover that was hit by the ember and then use Pursuit on it.

[Caleb rolls a 13 on a d20 Accuracy Roll]

GM: Hits

[Caleb rolls a 34 on a 2d6+10+14 on a Damage Roll]

Caleb: After that resolves, I'll use Sly Scheme to boost Pawniard's Attack by +1 CS and end its turn.

GM: As the Snover 1 is hit from behind by the metal claws of Pawniard, it falls flat and thuds into the ground, a bit singed and one of its branches are snapped from the blade of the pawniard. Anything from you Caleb?

Caleb: Yeah, I'll rush behind the other Snover that used Grass Whistle and I'll hit it with a Feint Attack. That has sureshot so I'll just roll for a crit.

[Caleb rolls a 18 on a d20 Accuracy Roll]

[Caleb rolls a 25 on a 2d6+8+10 on a Damage Roll]

GM: Uh huh, 25 Dark Physical to Snover, taken.

Caleb: I'll then use the Rogue Feature since i hit an Attack to use a Tactic Maneuver as a Free Action and try to Trip him.

GM: Roll Accuracy for Trip.

[Caleb rolls a 7 on a d20 Accuracy Roll]

GM: Luckily for you, he has no speed at all for evasion. Make a Combat or Athletics now.

[Caleb rolls a 2 Successes on a 3d6 Athletics Check]

[GM rolls 4 Successes on a 4d6 Athletics Check]

GM: As you try to low sweep the tree, its trunk is extremely durable and you recoil a bit from the impact. It seems to be hurt but heavily firm in the snow unfortunately.

Caleb: Sounds about right. *Caleb recoils from the impact and holds onto his shins in relative pain*.

GM: That'll be the end of Round 1! All of the sudden, from a cave over the top of the hill, you start to hear a low reverberating growl. You see a sharp reaction from the Cubchoo, looking at that direction for some reason.

Caleb: "That's likely the Beartic, or at least something more dangerous, let's resolve this fast."

GM: Cubchoo is going to throw another Ice Shard at Caleb this time, then run off towards the cave.

[GM rolls a 6 on a d20 Accuracy Roll]

Caleb: Barely hits.

[GM rolls a 29 on a 2d6+8+12 on a Damage Roll]

GM: Ice physical damage as normal. Anyone without a Pathetic Intuition can tell that the Cubchoo seems to be fleeing towards the cave as it is its home. Whether or not its getting assistance...that's your call to gamble on. Your guys turn next.

Mirai: "Hear that? We better hurry up and trek further up the mountain before whatever is in there gets out. Vulpix, make quick work of the last Snover, Ember!"

[Mirai rolls a 20 on a d20 Accuracy Roll]

GM: That's a crit!

[Mirai rolls a 41 on a 4d6+16+10 on a Damage Roll]

GM: Yeahhhh. That Snover was already distracted by the noise in the cave and it's now also a crisp.

Caleb: "These guys are dealt with, let's hurry"

Mirai: "Agreed" [Scene End]

Battling with Pokemon

Battling with Pokemon is essential for a Pokemon Campaign so there are a few rules to follow! The rules below allow for multiple styles of battling and strategies with multiple Pokemon on the Field, but remember **the default and easiest method of Player is just having one Pokemon on the Field.**

1. Each Trainer may carry up to 3 Pokemon that consist of their **Pokemon Party**. This limit may be modified at the GM's discretion but the limit is solely for attrition and combat speed reasons. Additionally if they had 6, they'd have a counter to almost anything you throw at them, and it'd take way too long

2. Each Player gets one set of Commanded Pokemon Actions per Round. In addition to your own Standard, Swift, Reaction and Movement Action, you also get one Standard, Swift, Reaction and Movement Action that can only be used by your Active Pokemon on the

field. This set of Actions can be split between your Active Pokemon. Even if you're fainted, you still have a set of Commanded Pokemon Actions, allowing your Pokemon to act on their own volition.

3. Players may have Multiple Pokemon on the Field at a time. Unlike normal Pokemon, you can have any number of Pokemon on the Field at a time. This however does not change the fact you only have one set of Commanded Pokemon Actions per Round. If you have an Infernape, Skarmory and Meowstic all on the Field, Actions can be split amongst them, but they can only use Actions when it's their Initiative (Unless it's triggered). You could decide halfway through the round that you want to have Infernape attack, so if they take Initiative, they'll use a Standard Action, but the Skarmory's nor Meowstic can use a Standard Action when their Initiative is up, however they can use any other available Actions such as Movement or Swift.

Switching Pokemon

Trainers can Switch their Pokemon in battle, which returns their current Active Pokemon into their Pokeball and sends out another Pokemon to take their place. This is often done as one Action, known as a **Full Switch**, but can be broken up into separate **Recall and Release Actions**.

When Switching out a Pokemon you can release them to a space within 5m and only Recall them if you're within 5m of them. A Trainer cannot perform a Recall Action or Release Action unless they're in possession of their Pokeball. If you faint, your Pokemon can still Switch themselves out using their Standard Action, even if they're within a Pokeball.

Whenever a new Pokemon is switched into battle, they may only use Actions if there are available Pokemon Actions this Round.

Note: Whenever a Pokemon or Trainer enters a Scene or is Recalled, their Combat Stages are set to their Default value.

Full Switching a Pokemon

Requires: Trainer or Pokemon's **Standard Action**. If they're **Fainted**, it can be a Trainer's **Movement Action**.

Recalling or Releasing a Pokemon

Requires: Trainer's **Movement or Swift Action**

Using Overleveled Pokemon

Your Players have caught something over their maximum Pokemon level, so what happens?! In order for that Pokemon to listen to their commands, each turn, they must pass a Command Check with a CR equal to $1+X$, where X is the number of tiers they're above your maximum Pokemon Level. For instance, if you're a Level 2 Trainer, a Level 20 Pokemon would require a CR 3 Command Check.

The following occurs depending on how they fared compared to the required successes.

Crit Failure - The Pokemon will actively spite the Trainer or their allies somehow.

Failure - The Pokemon will do what it thinks is best towards succeeding the encounter.

Success - The Pokemon will obey the command.

Crit Success - The Pokemon will obey and no more obedience checks need to be performed.

Leveling Up Pokemon

While Trainers Level Up based on milestones and the number of Sessions they complete, Pokemon do not have experience or Level Up normally. Instead, their Level is tied to the Trainer they belong to. (If they're Wild they can be set to any level)

At Trainer Level 1, the **Maximum Level their Pokemon may be is 5**. Each time the Trainer Levels up, **this Max is increased by +5**, all the way to **Level 100** when they reach Trainer Level 20!

Additionally, whenever a Trainer Levels up, all of their Pokemon may be increased by up to +5 Levels. This allows them to keep up with their Trainer as far as combat output. While this may be jarring to not have Pokemon levelup immediately, think of it as the same progression as Trainers! Whenever they **Train a Pokemon via a Downtime Action**, they may also increase their Level by up to 20 (Unless it would exceed their Max Level)!

Example (Level 1): A Trainer starts with a Level 5 Charmander. After the Trainer Levels up to Level 2, the Charmander also gains +5 Levels and is set to Level 10.

Example (Level 8): A Trainer that is Level 8 has a Maximum Pokemon Level of 40. They find a wild Nidoran that is level 7 and convince it to join them. The Trainer Levels up, increasing their Max Pokemon Level to 45 and increasing the Nidoran to Level 13. During their next Downtime, they decide to Train Nidoran a little and as a result, it gains 20 Levels and reaches Level 33! If the Trainer performs another Downtime Action to Train it, it's set to Level 45 because it cannot exceed their max! If you find it a little jarring to suddenly jump from a Nidoran to Nidoking, you could have them gain fewer levels per Training, have stipulations involved with evolving, or just acknowledge that as a higher Level Trainer, you're more efficient at Training!

Whenever your Pokemon Levels Up, follow the list below to grant the Pokemon benefits.

- » They gain **+1 Stat Point** to distribute how they please (They follow Glass Cannon Rules as well)
- » They may **learn an Attack on their Level-Up list** if their level is equal to or higher than the number next to it.
- » They may **switch any Attack(s)** between their **Battle Attack List** and your **Known Attack List**.
- » Check to see if your Pokemon has the possibility of evolving!

Battle Attack List

Unlike Trainers, Pokemon have two Attack lists, Battle and Known. Their Battle Attack List consists of **6 Attack Slots by default**. During an Encounter, the Pokemon may utilize any of the Attacks in their Battle Attack List.

Known Attack List

Whenever a Pokemon learns an Attack but doesn't want to replace an Attack on their Battle Attack list, it is instead added to their Known Attack List.

Whenever the Pokemon is Trained as a Downtime Action, they may relearn these Attacks and swap them between the Battle and Attack List! This allows Pokemon to accumulate learned Attacks over time and to mix and match based on what challenges they may face ahead! There is no limit to the number of Attacks on this list.

Think of this as the explanation on why Pokemon in the anime know more than 6 Attacks and a mechanic for Pokemon not magically forgetting how to use an Attack they've used in the past.

Pokemon Progression

Similarly, Pokemon also have a progression system they follow when reaching level thresholds and leveling up. Unique Level Thresholds stop at Level 50 so all of the effects are front loaded for shorter campaigns, the maximum level for Trainer owned Pokemon is Level 100. (But yes, GMs, you can still have a Level 240 Mewtwo because why not)

GM Note - You may choose how many of these effects apply to Pokemon opposing the Party. Applying them all of course will take longer to stat but will lead to stronger Pokemon! If some pokemon are meant to be weaker, instead pick and choose what they gain. Perhaps this wild mankey doesn't have a role or only has a basic ability! This way it gives you less on your plate to think about in combat. Ensure however that if one of these Pokemon are captured, they can be retrained to gain full progression benefits.

At Level 1

- » You learn all of your **Species Starting Attacks**.
- » You learn an **Ability** on your Dex Ability List
- » You choose a **Skill** to become **Trained**. Trained Skills roll an additional +2d6.
- » You gain a **Pokemon Role** and choose two of its listed Starting Stats to gain +5 Stat Points in. These are added to their Base Stats Automatically. You cannot select the same stat.

At Level 10

- » You are qualified to benefit from the **Rank 1 Effect** of the **Pokemon Role** you chose at Level 1
- » You may **learn a Tier 1 Tutor Attack** from your Tutor List

At Level 20

- » You may **learn a Tier 1 or Tier 2 Attack** from your Tutor List.
- » You may choose a **Skill** to become **Trained**. This cannot be the same Skill chosen at Level 1 if it was Proficient or Mastered.

At Level 30

- » You may either **gain another Pokemon Role** or **gain an additional Ability** on your Dex Ability List. (you don't gain the stats from the second ability)
- » You may **learn a Tier 1 or 2 Attack** from your Tutor List

At Level 40

- » You **gain +5 Stat Points in two different Stats** of your choice, which go in the extras column.
- » You may **learn a Tier 2 or 3 Attack** from your Tutor List

At Level 50

- » You may **learn a Tier 2 or 3 Attack** from your Tutor List
- » If your Base Stat Total is 45 or below, you gain +5 Stat Points in two different Stats, which go in the extras column.

At Level 25/50/75/100 (Requires GM Approval- optional bonus)

- » You may gain a custom upgrade based on how your Pokemon has been raised or how it differs from normal species. If a Pokemon has not been with its Trainer long enough, one of these milestones may be skipped at GM Discretion until they develop a bond. This can be an alteration or improvement to an Attack, Role, Ability, Capability or Item they have. These are similar in application to Variant Effects and should not be gained if you already have one, they're just optional standardized custom effects. (See: GM Guide).

Examples

1. My Carkoal enjoys using the Detonator Role to throw out explosive pieces of Coal on the Field. It becomes upgraded which allows it to set 3 Hazards as a Standard Action as well as the base effect.
2. My Quilava loves to use Rollout and Flame Wheel as its signature attacks. It has the Quick Curl Ability added to its Dex Ability list, which I retrain Flame Body so I can take it. At Level 50, its Flame Wheel Attack is improved to be aligned with a Tier 3 Attack and gains a bonus while it has a Rolled Coat. I rename it to "Infernal Dash"

Evolution

Whenever your Pokemon meet an Evolution Threshold, usually stated in the Pokedex, they may evolve at any point into their next Evolution stage! This involves several changes occurring in the Pokemon, including the following

1. Their Base Stats will change. You may also retrain your Pokemon's Stats at no cost.

2. Their Ability List changes. When evolving, you can replace your Abilities granted from Level Up Progression with Abilities on their Evolution's Ability List. If the List only has one Ability instead of 3, you must replace it and this is not optional.

Note: Your GM must approve you evolving without replacing abilities as it doesn't make sense for some Abilities to be carried over, such as Metapod keeping Battle Armor on a Butterfree who is very fragile by comparison. However this is kept optional by default to expand ability options.

3. Their Skills and Capabilities can change.

4. They learn an Evolution (Evo) Attack, listed in the Pokedex.

Evolution can be performed in three different ways, depending on GM Discretion and Player preference. Considering Trainers can only level up after a session, so can Pokemon, so be flexible with the fluff of your Pokemon's special moment!

If you don't want to have power imbalances, you can just stick with standard off-screen Evolution, but these methods enable cooler and more cinematic evolution moments! (Remember that if Players can evolve this way, you can have enemies perform this as well!)

Off-Screen Evolution

If you want to be simple and do a classic Evolution, Pokemon can simply evolve after a battle or while downtime is occurring or between sessions. Nothing is special about this but it certainly leads to less power imbalances so it is the safest bet. Off-Screen Evolution is the most convenient as it doesn't involve character sheet changes mid battle and is the most common way to evolve Pokemon that don't battle often.

Example (Off-Screen Player) - While being trained in a nearby city, a Player's Swinub evolved into a Piloswine.

Example (Off-Screen NPC) - After meeting with their Rivals again after the 2nd Gym, the Rival's Totodile evolved to Croconaw.

Mid-Battle Evolution

Whenever a Pokemon reaches the threshold to Evolve, and their Evolution does not require a Trigger, they can also perform Mid-Battle Evolution. If a Player is planning to perform this, make sure they prepare their Pokemon Sheet before the session so as to not spoil combat pacing. In order to Evolve during battle, it is a Swift Action, Interrupt from the evolving Pokemon. Then once they evolve, they may benefit and boost their power in battle depending on when they evolved. Refer to the examples below for some ways a Pokemon can evolve.

Example (Sturdy Evolution) - A Sheldon Intercept an Attack and then evolves, upon hit they resist the Attack by an additional damage step or it is no longer a Critical Hit.

Example (Empowered Evolution) - A Wartortle who rolled a Critical Hit Hydro Pump suddenly evolves with the power its exerting. The Hydro Pump's Range is changed to Line 10 as a result, blasting its enemies to shambles.

Example (Dramatic Evolution) - A Pawniard would faint but is left standing at 1 HP as the smoke clears and a Bisharp is standing. It gains two ticks of Temporary Hit Points and becomes Enraged, ready to strike back

Example (Emotional Evolution) - A Kirlia desperately tries to heal its Trainer with Heal Pulse and its emotions lead it to evolve into a Gardevoir. This empowers their Heal Pulse and it instead heals 8 Ticks of Hit Points instead of 5.

Triggered Evolution

Also known as Narrative Evolution, some Pokemon may refuse to evolve until a Trigger occurs. Once this Trigger occurs, the emotional shock or circumstances of the scenario will lead into a sudden evolution and power boost! This can be kept secret from players but do not use it to punish them, as lower evolution stagers will be weaker in battle. In addition, if you do keep a Pokemon unevolved for longer, it could lead to a power bonus to compensate, especially if it has ties to the narrative.

Example (Changes Beliefs) - A Trainer's Ekans refuses to believe it needs to evolve in order to protect its allies. When their Trainer faints during a battle, Ekans is shocked, evolves into Arbok, then becomes Enraged and gains +2 CS in Attack to avenge its friend.

Example (Needs Strength) - A Charmeleon is weaker than the average Charmeleon of its kind. After speaking with a Professor, they'll inform them that some Pokemon need supplements to gain the strength to evolve. This Charmeleon will require a Fire Stone to evolve as well as meeting the level prerequisites, however once it evolves, for the next two sessions, its Default SP ATK CS is set to +3.

Example (Improved Bond) - A disloyal mankey finally sync's with their Trainer, agreeing with their orders mid combat and throws a punch at an enemy Zangoose. Mid-punch, it evolves into Primeape and is allowed to change their Attack into one that primeape knows.

Spirit Evolution

In addition to normal Evolution, Pokemon can alternatively undergo a process known as **Spirit Evolution**. This allows a Pokemon to get stronger, however their **physical form won't change into their typical next stage**. Previously in PTU this was known as being an "Underdog", however, this is now an alternate path in your Pokemon's progression. What this allows you to do is keep a prior form without sacrificing the strength of an evolution, fulfilling an effect like Ash's Pikachu being as strong as a Raichu.

How to Spirit Evolve

In order to have a Pokemon undergo Spirit Evolution, they must meet the requirements of one of their listed Evolutions. For example, if a Treecko were to Spirit Evolve into Grovyle, it would need to be Level 15, then Level 30 to advance to Sceptile, all while physically remaining as a Treecko.

The following properties change when a pokemon Spirit Evolves.

1. Their Base Stats change to their chosen Evolution
2. Their Level-Up Attack List and Tutor Attack List changes to their chosen Evolution
3. Their current Skill Ranks are treated as being one evolution step higher.

Unlike normal Evolution, the following properties **do not change** when a pokemon Spirit Evolves. They are preserved from their previous evolution. With GM Discretion, some of these can be changed but are not recommended.

1. Their Species does not change.
2. Their Type does not change
3. Their Ability list does not change
4. Their Capabilities do not change
5. Their Skills do not change to their Evolution's Ranks

Example (Ability Discretion) - My Graveler Spirit Evolves into a Golem at Level 35, allowing him to learn Sheer Force from its Ability List by retraining. This is normally not allowed but the GM doesn't think this abuses anything. Another player decides to Spirit evolve his Nincada into a Shedinja and take the Wonder Guard Ability, to which the GM reprimands him and denies it. The ethereal bug shall suffer.

Example (New Attacks) - My Chewtle Spirit Evolves into a Drednaw and is able to learn Jaw Lock at level 20 despite being a small guy. This is fluffed as him biting ankles really hard.

Example (Appearance Changes) - My Eevee Spirit Evolves into a Flareon, having its fur become slightly more red and it gains the Tutor List of Flareon, being able to learn Flamethrower at Level 40 as well. It doesn't however gain the Heater Capability

Pokemon Roles

A Question you may ask yourself is, what distinguishes one Alakazam from another? Are they all the same? No they are not, each of them have their own style of combat preference which gives them assistance on the battlefield. **Similarly to Trainer Classes, Pokemon also have Roles** they can take when they're born which grant them multiple effects to vary their playstyle. Maybe the Alakazam is an artillerist that sets psychic mines that explode on the battlefield!

When a Pokemon is born at Level 1, they gain a Pokemon Role, then they may choose two different stats listed under that role to gain +5 Stat Points in (Which automatically apply to their Base Stats). **At Level 10**, they'll learn the **Rank 1 Effect** of the Role they chose. **At Level 30**, they can either gain another Role or gain another Ability (They don't get the stats of their second role). The next few pages will list all Roles.

OFFENSIVE ROLES

Artillerist

Starting Stats: HP, Attack, Special Attack

Effect: As a Swift or Movement Action, you create a 2x2 Zone within 8m. Then choose a Natural Blast or Line Attack within Frequency. At the end of the next Round if you haven't fainted, the chosen Attack is used as a Free Action on all Enemies in this Zone (unless it affects the field like Hazards). This Role may also be activated with Priority at the start of a Round. If you do so, the Attack is used at the end of the Round rather than the next one.

Behemoth

Starting Stats: HP, Attack, Defense

Effect: Your Size Category is increased by one step. As a Swift Action, until the end of your turn, you may use your Melee Attacks as if their Range were Burst 1 or Close Blast 2. If any Attacks are used this way, you cannot perform Save Checks until the start of your next Turn.

Brawler

Starting Stats: HP, Attack, Defense

Effect: Whenever you resolve a Melee Damaging Attack used as a Standard Action, you may use another Melee Attack or Basic Attack against a different adjacent enemy as a Movement Action + Reaction; or a Reaction if the triggering Attack missed. This Attack is resisted by an additional step for each Status Affliction you are affected by.

Corruptor

Starting Stats: HP, Special Attack, Special Defense

Effect: Whenever you inflict a Status Affliction, one affected enemy may become Marked with a Corruption Mark while that have that Affliction. Enemies with your Corruption Mark must lose a Tick of Hit Points or have a Stat with Positive CS lowered by-2 in order to perform a Save Check or use a Self Attack.

Detonator

Starting Stats: Attack, Special Attack, Speed

Effect: As a Swift or Movement Action, you may create an Explosive Hazard within 3m that are [Breakable - Fragile]. As a Free Action (Priority) when you would Faint or as a Swift Action + Reaction, you may destroy any number of these Hazards and then immediately use a Basic Attack with the Targets being all Combatants that were Adjacent to Explosive Hazards destroyed this way. This Basic Attack has the Smite Keyword. You cannot destroy Explosive Hazards that you created in the same Turn.

Executioner

Starting Stats: Attack, Special Attack, Speed

Effect: As a Swift Action, you can Target an enemy within 10m and learn their current Hit Points and its percentage based on their Max HP. Whenever you use an Attack against a single enemy that is below 50% Hit Points or has a Status Affliction, they cannot apply Stat Evasion against it.

Magus

Starting Stats: HP, Special Attack, Special Defense

Effect: Your Special Attacks grant an Energy Token upon either missing all Targets or on a 17+ (Max 3). Energy Tokens act as Spirit Points for Mental Affliction Save Checks and non-Physical Attack Accuracy Rolls. Energy Tokens are removed at the end of a Scene.

Mystic

Starting Stats: Attack, Special Attack, Special Defense

Effect: As a Swift Action, you may use a Physical Attack as if it were the Special Category or vice versa. If the Attack matches one of your Types, this is a Free Action instead.

Ranger

Starting Stats: Attack, Special Attack, Speed

Effect: As a Swift or Movement Action you may choose a 1-Target Attack you know. Until the end of your Turn, that Attack's Range becomes "5, 1 Target" if it was Melee, or its existing range is increased by +2 meters. Whenever an enemy within 5m, but not adjacent to you, misses an Attack on you, you may trigger an Attack of Opportunity against them, ignoring Range.

Zephyr

Starting Stats: HP, Attack, Speed

Effect: Once per Turn, as a Swift or Movement Action you may choose a "Melee, 1 Target" Attack you know and grant it one of the following until the end of your Turn. It gains the Dash Keyword. It gains the Pass Keyword. Enemies treat it as having the Unstoppable Keyword if Speed isn't their highest Stat Evasion.

DEFENSIVE ROLES

Avenger

Starting Stats: Attack, Defense, Special Attack

Effect: Once per Round, whenever an Ally is hit by an Attack, as a Free Action the Attacker becomes Marked with an Avenger Mark. While an Enemy has an Avenger Mark, you are Provoked by them. Your Attacks have a bonus to Accuracy against enemies with your Avenger Mark equal to your Tier Level, or double if they caused an Ally to faint this Round.

Bastion

Starting Stats: HP, Defense, Special Defense

Effect: Whenever you're hit by a Physical Attack, you may use a Reaction or Swift Action to apply half of your Special Defense to Damage Calculations instead, or both to apply the full value. This also applies to being hit by Special Attacks, with Defense being used instead.

Bulwark

Starting Stats: HP, Attack, Defense

Effect: Allies that are Adjacent to you treat you as Cover Terrain. If any Adjacent Allies are hit by a Blast or Line Attack, they may use a Reaction to resist it by an additional Damage Step, but if you were also Targeted, it is one step more effective against you.

Decoy

Starting Stats: HP, Defense, Special Defense

Effect: You gain the Taunt Attack and it doesn't take an Attack Slot. Whenever you cause an Enemy to become Provoked, it is treated as if it were a Mental Affliction instead of its listed duration.

Obstructor

Starting Stats: HP, Defense, Special Defense

Effect: Choose up to 2 unoccupied Spaces within 3m to create Blocking, Cover, or Slow Terrain that is [Breakable- Fragile] and cannot exceed your size. This requires a Swift or Movement Action, but can be used as a Standard Action, to instead choose up to 4 spaces or make it [Breakable- Dense] instead.

Sanctifier

Starting Stats: HP, Special Attack, Special Defense

Effect: At the start of the Round, you may create a 3x3 Zone within 5m as a Free Action. At the end of the Round, any Combatant occupying this Zone restores Hit Points equal to your Tick Value multiplied by your Tier Level. This cannot be used if you have a Status Affliction and you can only have one Zone at a time.

Sentry

Starting Stats: HP, Attack, Special Attack

Effect: At the start of the Round, you may create a Zone of up to 4 contiguous unoccupied spaces within 5m which lasts until the end of the Round or you trigger this Effect. Whenever an enemy enters this Zone you may Trigger an Attack of Opportunity or use an Attack as if it had the Priority Keyword with only them as the Target.

Tumbler

Starting Stats: HP, Attack, Speed

Effect: At the start of the Scene, you gain Nimble Tokens equal to your Tier Level, which last until the end of the Scene. You may expend one Nimble Token as a Reaction to do any of the following. Gain +3 Uncapped Evasion against an Attack after seeing the Accuracy Roll. Treat your Defense Stat as if it were half the value of your Speed Stat. Treat an Attack only you are Targeted by as if it didn't have the Smite Keyword.

Vitalist

Starting Stats: HP, Defense, Special Defense

Effect: Whenever you gain Temporary Hit Points you may instead restore the same amount of Hit Points. Whenever you restore Hit Points, you may instead gain that much Temporary Hit Points. As a Swift Action, you can lose 3 Ticks of Hit Points to cure yourself of a Physical Affliction (If your Defense is higher than your Special Defense), or a Mental Affliction (If your Special Defense is higher than your Defense).

Warden

Starting Stats: HP, Defense, Special Defense

Effect: Once per Round you may use the Intercept Maneuver as a Swift Action on an Adjacent Ally. Whenever you use the Intercept Maneuver, it isn't increased by an additional damage step.

UTILITY ROLES

Breaker

Starting Stats: HP, Attack, Defense

Effect: As a Swift Action when using a Damaging Attack against a single Target, apply one of the following effects. If the Target has negative CS in the corresponding Defense Stat, all are applied instead

- » The Target and their Adjacent Allies cannot use Reactions until the Attack resolves
- » They cannot apply Damage Reduction against it
- » This Attack ignores positive CS in Defense and Sp Defense.

Caretaker

Starting Stats: HP, Special Attack or Special Defense

Effect: You gain the Helping Hand Attack and it doesn't take an Attack Slot. Whenever you Target an Ally with an Attack, Ability or Bolster Maneuver, they gain a Tick of Temporary Hit Points unless it was a Free Action. Temp HP gained this way can stack on existing Temp HP.

Companion

Starting Stats: HP, Special Defense, Speed

Effect: At the start of the Scene or as a Standard Action, an Ally becomes Marked with a Friend Mark. You may use Self Attacks as if they were Melee, 1 Target, however they can only Target an Ally with your Friend Mark. When used this way, instances of "The User" become "The Target" instead.

Disruptor

Starting Stats: Any 2 Different Stats

Effect: Whenever an Enemy within 2m of you rolls a Skill Check, Accuracy Roll or Save Check, you may use a Reaction to penalize it. If it was a Skill Check, it has a Bane. If it was an Accuracy or Save Check it has a Penalty equal to 1 plus your Tier Level.

Enhancer

Starting Stats: Any 2 Different Stats

Effect: As a Reaction, whenever you or an Ally within 3m gain CS, you may target yourself or an Ally within 3m. The Target gains +1 CS in one of the Stats increased. You cannot target the same combatant who gained CS from the Triggering instance. A Combatant cannot be Targeted by Enhancer more than once per Round.

Leader

Starting Stats: HP, Special Defense, Speed

Effect: You may use Basic Orders but can only Target other allied Pokemon with them. Whenever you hit a single enemy with an Attack, they gain a Command Coat. You may expend this Coat when an Allied Pokemon within 3m Targets them with an Attack to use an Order on them as a Free Action.

Provisioner

Starting Stats: Any 2 Different Stats

Effect: You gain 4 Inventory Slots. You may use and equip Small or Medium Items regardless if they have the [Pokemon] Keyword. Adjacent Allies may take Items from your Inventory as a Free Action.

Saboteur

Starting Stats: Any 2 Different Stats

Effect: Whenever you hit a Status Attack used as a Standard Action against a single Flanked or Vulnerable Enemy, you may grant them the Sabotaged Condition until the end of their next Turn. This Condition can do any one of the following for the duration they're affected. Choose Type for the enemy to be considered as Neutral 1x Type Effectiveness against them.. The enemy cannot increase their Combat Stages. The enemy cannot restore Hit Points. A Random Ability is Disabled.

Scoundrel

Starting Stats: HP, Special Defense, Speed

Effect: You may ignore the restrictions and limitations of the Versatile Keyword if the Versatile Attack only targets enemies. Whenever you miss an enemy with an Attack, any subsequent Status Attack you use against only them until the end of the Round has the Sureshot Keyword.

Wayfarer

Starting Stats: Attack, Special Attack, Speed

Effect: The First time you would use a Movement Action each Round, it does not expend the Action. While you're in Terrain that matches your Naturewalk, you have Uncapped Evasion equal to your Tier Level.

Capturing Pokemon

In the video games and PTU, you may be familiar with Capture Rolls and throwing a Pokeball in the heat of battle to see if a Pokemon is captured! **We don't do that here.** The primary reasons are as follows:

1. When it doesn't work, it ruins combat pacing.

In the games, a Pokemon cannot be captured if it faints. Anyone who's faced a legendary knows the woes of bringing a legend down to red health, inflicting a status, then throwing as many Timer/Dusk/Ultra Balls as humanly possible until luck decides you earned the capture.

Now imagine that but in a TTRPG where most people only get a turn once every 10- 30 Minutes. If you don't capture it, all your friends simply wait and pass turns until it's your turn again, while the victim can still act. Is it really fun or just the way things are? Even then, the latest Pokemon games have out of battle captures.

2. When it works, It kills the suspense of a scene.

If people adjust the modifiers enough and game the system, someone could easily get lucky and capture an enemy before it even has time to act. Capturing a Pokemon is the same as fainting it in regards to removing it from the encounter so it essentially is a button for Players to press in order to not see the full potential of that Pokemon in combat. The only way to prevent this is by GMs to either have important Pokemon have a higher capture rate modifier or deny it from being capturable, but at that point why allow it at all?

Think of it this way. If i gave you an item that said, "As a Standard Action, make a Pokemon within 5m faint if you meet a TN on a d100" would it be balanced? Maybe, by sheer hit or wasting an action. Would it be fun? No, especially if the GM could use it against you. After all, how many people enjoy when Fissure or Sheer Cold hits them? Very skillful.

3. It's high risk gambling.

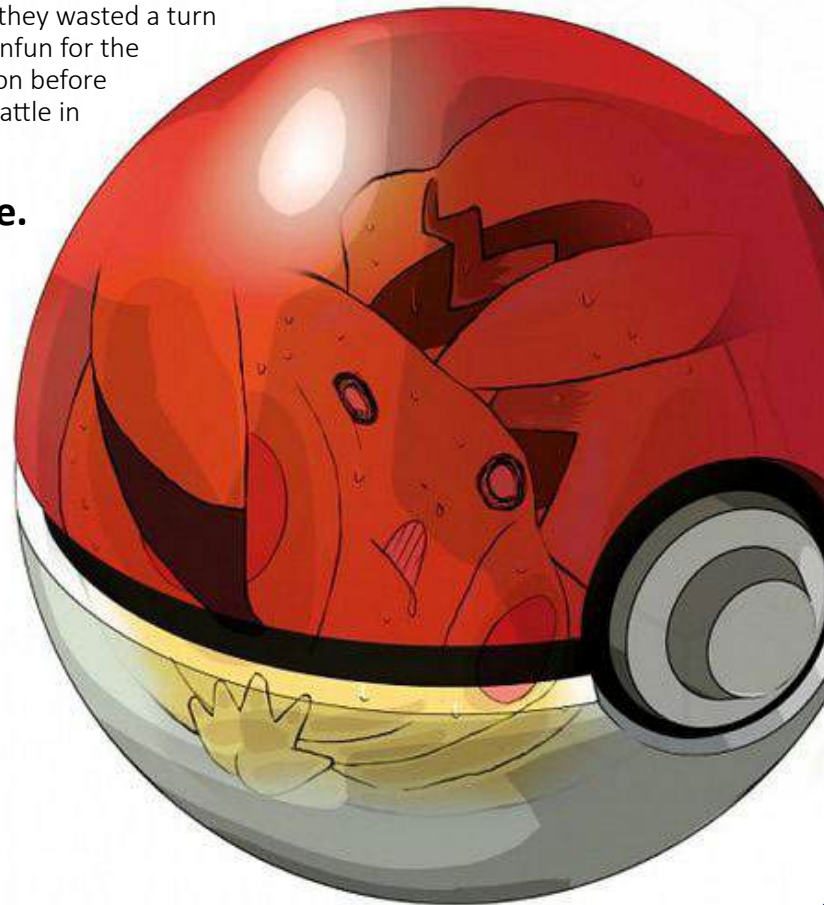

Capturing in battle is using an execute move. Your turn is either skipped or you remove a combatant. It's either unfun for the player and they wasted a turn (especially those who are salty against dice rolls), or it's unfun for the GM and it removes all the plans they had for that pokemon before they were even fainted. If the goal is to have characters battle in a scene, let them battle.

4. It doesn't even happen in the Anime.

Capturing is always done as the conclusion of a scene. Either they make a point to "weaken" the Pokemon first before using a Pokeball or it never escalates into a fight in the first place. By the way, Legends ZA likely will allow capturing when a Pokemon is knocked out. Its canon.

Thus the solution is **written in the Pokeball Item, where you can only capture willing wild Pokemon or unconscious wild Pokemon.** Either way the Pokemon will have been interacted with and it leads to a satisfying capture.

The next few pages will detail how you can capture Pokemon in PTE, either **after battle** or through **social interaction**.

Capturing via Fainting

Capturing via knocking a Pokemon unconscious is a very simple concept. After a battle is fully resolved, a Trainer as an Extended Action may expend a Pokeball to target a Fainted Pokemon and capture them. That's it. From this point, there are three directions you can go:

1. The Pokemon treats you normally

They are set at a [Neutral Bond Level](#). Depending on your setting it may be different, but being defeated in battle and captured isn't something that inherently makes a Pokemon hate you. It's a very normalized concept to many Pokemon and some may even respect you for defeating them in battle, possibly even making them like you more! While capturing willing Pokemon is the easiest outcome to becoming friends, capturing them after battle shouldn't be an option that's always penalized. Unless a Pokemon has a reason to dislike the Trainer, just have them start at neutral terms.

2. The Pokemon dislikes you

They are set to a [Distrusted Bond Level](#). Sometimes a Pokemon doesn't start on amicable terms, especially if it's unwilling and captured while unconscious. Think of Pikachu in the anime as disliking ash at the start. If the Pokemon has conflict with its Trainer or is naturally stubborn, it may start with a lower bond and dislike them. Be sure to make it aware to the Player why this is the case and give them opportunities to grow together to improve their bond

3. The Pokemon hates you

They are set to an [Disliked Bond Level](#). Sometimes capturing Pokemon isn't always rainbows and sunshine. Sometimes your Players may be genuine bad guys, seeing a loving couple of Mr. Mime and Jynx, then decide to capture one of them and separate the lovely duo despite clear resistance. Sometimes they may use a snag ball and steal a pokemon from the Trainer it adores. In these circumstances, make it aware to the Player why they don't like the Trainer and give them clear goals over time to be able to restore the relationship, if possible. As a penalty, these Pokemon will tend to need a narrative moment to bond with the Trainer before they even get to Neutral Bond Level.

Retraining Pokemon

As a Gm, you stat a Pokemon in a specific way to suit your Scene. You could have a grimer be an Artillerist and have a lot of Special Attack so it can throw sludge from a hill far away. Once a Player captures a Pokemon, they may immediately retrain them and restat them however they want.

This is allowed because if a Player wants a litten to be a bulky tank and you stat them to be speedy, they will not have fun using something they don't have control over. But at the same time, you as a GM don't want the Pokemon you made to lose its character integrity of how you made it, so the solution is to **compromise with your Players** each time a Pokemon is captured.

Refer to the following questions when a Pokemon is captured:

1. What aspects can I change about this Pokemon?

A Trainer may want to change the stat alignment, levelup movelist, its advancement options and pokemon roles, or even part of its personality! It's up to the Player and the GM to communicate what can freely be changed each time something is captured. If a Pokemon is more of a blank slate, you should generally allow anything to be changed.

2. What aspects of this Pokemon must stay?

Secondly, a GM may specify that certain attributes of a Pokemon, listed prior, cannot be altered lest it become a different Pokemon. This may include a Pokemon having a grudge against you, having a specific role such as not wanting to be an Enhancer, or preferring to deal a lot of damage and having offensive stat investment.

3. How can these aspects be altered?

If there are any aspects that must stay, **all of them** must have a method by which they can be retrained over time and the GM must provide a method of doing so. This could be using downtime to slowly train the Pokemon into becoming an Enhancer, or bonding with it to decrease its stubbornness, or bringing it to a Pokemon caretaker who is more knowledgeable on training! So long as the Player can achieve their desired results, you can make them go through steps to make it fulfilling and keep its original character integrity. This allows them to go through a character arc and earn their new retrained status.

Time Phases

Using **Time Phases**, you can structure your sessions in a more granular way so your Players know how long actions take and they can plan what they want to do during a session.

There are **5 Time Phases**, each listed below.

Midnight	[12 AM - 8 AM]
Morning	[8 AM - 12 PM]
Afternoon	[12 PM - 4 PM]
Evening	[4 PM - 8 PM]
Night	[8 PM - 12 AM]

Interacting with Time Phases

There are multiple ways you can use Time Phases in your Campaign, some of which are listed below.

1. Allocating Campaign Content

When performing specific actions during your Campaign, each of them take a specified number of Time Phases at your discretion as the GM. If your Players are doing a Gym Battle, you may determine that it takes all of the Evening Time Phase to do so. If your Players are traveling from Viridian to Pewter City, you may determine that all the encounters take up the Morning Phase to the Evening Phase and they arrive in Pewter at Night, meaning the Pokemon Center may be less staffed at that point.

2. Performing Downtime Actions

A Time Phase can be used to perform a Downtime Action, each of which costs **4 Hours** of in game time. This will be the primary usage of Time Phases whenever your Party doesn't have something specific they need to do. For example, if your Players need to fight a Gym which is only open from Morning to Afternoon, they could spend the Morning Phase Training or gathering intel.

3. Resting

Players need at least 8 Hours set aside each day purely for resting. **By default, this is assigned to the Midnight Time Phase** so this doesn't have to be thought about. Players can forgo resting in exchange for more Downtime Actions if desired but suffer consequences if they do. If a Player ends a Day with little to no Sleep, they have a Bane to all Skill Checks until they get a full 8 Hours of sleep. Alternatively, instead of sleeping at Midnight, they could Sleep in 2 other Time Phases, allowing them to act while others are normally sleeping in your setting.

4. Time Specific Activities

Some quests can only be performed at specific times of day. Allowing certain activities to be time locked allows your Players to strategize what they do with their day. For example, a Gym could only be open for being challenged in the Morning, Afternoon and Evening Phase. A black market shop may only be open at Midnight. Your Players may have school during the Morning and Afternoon phase but can have free time in the rest of the day.

5. Time Specific Pokemon

Some Pokemon can only be found or can be found more commonly at certain times of day. If your Player is trying to hunt a Noctowl which is nocturnal, they may only be able to do so during the Night and Midnight Time Phase. If your Players are going out at night, it may also factor into what they encounter and how your Encounters are shaped.

Example of a session divided into Time Phases

Midnight- The Party is out in the wild at a Campsite. Andrew sleeps for 4 Hours and scouts the area for the other 4. Marie sleeps for 4 Hours and scouts the other 4, alternating with Andrew so they're not attacked. They're both tired and have a Bane to Skill Checks.

Morning- They both spend the morning phase meeting with a professor that consults with them about their current quest of investigating a cave. After which, Andrew will spend some time crafting a Darkvision Gadget for him and Marie. Marie will spend some time socializing with miners around the area and asking about the cave and what they may find inside. She gains some information about a dangerous Pokemon inside.

Afternoon- Andrew decides to continue his prior action of crafting Darkvision Gadgets, resulting in 2 Darkvision Gadgets. Marie decides to take the chance to nap for 4 Hours and get a full night's rest before their quest. This allows her to no longer apply Banesto Skill Checks.

Evening- Andrew and Marie go and explore the cave. They find what they're looking for and defeat an encounter.

Night- They spend the night phase leaving the cave and backtracking, returning to the city and reporting to the professor.

Downtime Phase

Whenever your Players have a gap in activities or have a Time Phase where they aren't doing anything, you could have them perform a Downtime Action. Whenever you use a Time Phase for Downtime Actions, it is turned into what we call a Downtime Phase. When performing a Downtime Phase, answer these questions below.

Ex- The Players know the Gym is open until the Night Phase so they plan on using the early half of the day to prepare for the upcoming battle, using the Morning and Evening Phase to use the Training Downtime Action.

1. How much Time will they spend on Downtime Actions?

Each Downtime Action takes 4 Hours to perform, meaning a full Time Phase. The only exception is the Midnight phase which can allow a Trainer to perform up to 2 Actions within it, at the cost of sleeping less. If they simply spend one Time Phase on it, they may perform the Downtime Action as normal. However, if they spend multiple Time Phases on the same action, instead of repeating the action, they gain a bonus. For each additional Time Phase spent on the same action, they add 2d6 to their dice roll (This may exceed 6d6). If it was a Long Term Project, they roll multiple times instead for each phase spent.

Ex - One of the Players decides to spend their morning pickpocketing strangers by using the [Downtime Action - Working]. They only spent 1 Time Phase so they'll roll normally. If they spent 2 Time Phases to do so, they'd add a 2d6 Modifier To their Roll instead of rolling twice. Another

Player decides to spend their Night and half of a Midnight Phase to perform their [Downtime Action - Research]. This allows them to roll twice, adding both results to the TN.

2. What Downtime Actions will they perform?

Players may choose how to spend their time by performing Downtime Actions. The list further on has a few options as examples but GMs can come up with new ways if they desire! The party usually will spend their time on their own doing separate things but players can also choose to work together! If two players perform the same Action during a phase, they must choose which one of them will be the initiator and which will assist. The Initiator performs the Downtime Action roll and the Skill Check is considered an Assisted Check. If multiple Players instead work together for a Long Term Project, they instead both perform the action separately, gaining no benefits together.

Ex- Two Players are going to a bar to [Socialize] with someone they're planning on robbing. One Player leads while the other is the wingman. The assisting player has Expert Charm, so the initiator gains 1d6 and a Boon to the Check. Two other Players are at the library as they both try to [Research] and find information on an artifact they found. The Artifact is a TN 50 Long Term Research Project. They both roll Occult Edu, one getting 14 and the other getting 21. Their total is 35 and they are closer to meeting the Target Number!

Once the following questions have been answered, take turns resolving each action person by person.

How to Resolve Downtime Actions

Your Players have decided what they want to do, great! Now you go around to each player and perform the following steps.

1. Have the Player explain their Goal with this Action.

The first thing you'll do is have the Player explain what their goal is with this Downtime Action and what they're looking to gain from it. At this point you'll determine what type of Downtime Action it is. For example, if a Player suggests they want to go learn about a Zygarde Cult at the local library, it may be a very basic Research Downtime Action with a TN of 15. It may not even require a Skill Check if it's simple enough!

During this step you also tell the Player which is the relevant Skill to use for its associated Skill Check. If the Player is doing an Action such as Questing, you'll also need to determine the Challenge Rating for the Quest.

2. Factor in Skill Check Modifiers

Once you determine what the Players are going to roll, all of the Modifiers are determined. This can include Assisted Checks and other Players performing the Action alongside them. This also includes factoring in any sources of Boons or Banes that may apply to the Skill. For example, Socializing with a Primeape may be more difficult than normal Pokemon, leading to gaining a Bane on the Check. Socializing with their Togepi who is very trusting and bonded to them after hatching may be easier, resulting in a Boon.

4. Have them Roll!

Once all factors have been adjusted, the Player performing the Downtime Action may roll!

5. Determine their Result

Calculate how many Successes they rolled and then refer to that Downtime Action's result chart to determine the result. The more successes they have, the better the result!

Long Term Projects

Unlike normal Skill Checks that measure the number of Successes you roll, Long Term Projects are meant to be a cumulative Skill Check that is chipped at over time. In order to succeed in a Long Term Project, you need to meet the **Project's Target Number (Abbreviated as TN)**. Some Downtime Actions like Researching and Innovation follow the Long Term Project Rules, alongside some edge cases like if you were Crafting a complicated item.

Whenever a Player uses a Downtime Action on a Long Term Project, they perform a Skill Check as normal, however instead of counting the number of successes, **you add all the values of the dice**. If you have any Boons on the Check, roll an additional +2d6 (This may exceed 6d6). Conversely if you have any Banes on the Check, roll two fewer dice. Additionally, if you use the Exertion Modifier, you perform the Skill Check twice, adding both results instead of rerolling, and it must be used before the roll is performed.

The result of adding all the dice becomes your **Progress Value** or is added to an existing Progress Value. In order to complete the Long Term Project, your **Progress Value must meet or exceed the Project's TN**, then you'll gain all associated rewards or info of the project.

When a Long Term Project is created, the GM will determine the following:

Example (Long Term Basic) - A Player has discovered a book in a library with the subject matter of "How to bond with your Egg". Books are Long Term Research Projects and the GM determines the TN to be 30. The Player spends the Afternoon and Night Time Phase to perform 2 Downtime Actions, using the Pokemon Edu Skill to roll twice and add to their Progress Value. After succeeding, the Player learns how to more efficiently hatch eggs, being able to permanently gain more Nurture Points each time they gain some.

Example (Long Term Milestone) - A Player has found an ancient compass in a pawn store and stole it in order to research its origins. Due to the rarity, it was deemed to be a Mythical Long Term Research Project with the TN being 150. The Player is intrigued and spends a few Night Time Phases for the next few sessions studying it with Occult Edu Rolls. When the Progress Value reaches 80, they make a breakthrough and realize one of the symbols came from a cult in Snowpoint City that served Regigigas. After completing the Research Project, they determine that the Compass is actually a key to the entrance of Snowpoint Temple.

Example (Long Term Limitation) - The Player finds an ancient tablet, however it is in Unown Script, meaning it's indecipherable until they find an NPC that can help translate it. Another player finds a high tech gadget with the Aether Foundation logo, however has no clue how to reverse engineer it until they meet an NPC that is an Aether grunt and has worked with that technology in the past.

1. The Project's Target Number

By Default there are four different types of projects which determine its TN. If the Project is **Basic**, the TN is 15 or 30. If it is **Intermediate**, the TN is 50. If it is **Advanced**, the TN is 100. If it is **Mythical**, the TN is 150.

2. What Skills may be used

Similar to designating a Skill to be used in other Downtime Actions like Socializing, the GM also must determine what Skills are valid to use for this Project. It doesn't have to be one Skill and could be multiple, depending on how the Player is attempting to tackle the challenge. For example, if an Advanced Innovation Project is creating a device for reading dreams, one player could use Occult Edu flavored as studying books on Somnology. Meanwhile another player uses Tech Edu to progress the project as they flavor it as actually creating the device.

3. Are there any Project Milestones

There could possibly be milestones set within the greater Target Number, whereas whenever each Milestone is met, a piece of information is gained or something of significance is revealed. This is recommended for longer Projects so each action feels like they're progressing and not throwing numbers into a void. An example, if they're creating an Item, could be at the halfway point they gain a working prototype but its effects aren't as effective. If they're researching something a milestone could be that they reveal a crucial plot clue. Drip feeding content in a Long Term Project ensures it always stays exciting!

4. Are there Project Limitations

Sometimes a Player can't simply throw time at a project and get all the answers. A Player simply can't say I want to make a Gengar Mega Stone and will it into existence. Whenever you give them a Project you deem to not be possible at the moment, you may place Limitations on the Project. Until they solve this Limitation, they won't be able to progress past a certain point. Examples of limitations could be needing a plot device, needing information or needing to be a specific Skill Rank in order to even work on it.

GM Note - Do you not have enough screen time to dedicate to Downtime during the session? What you could do is relegate it to "Off-Screen". Every week that passes between a session, a Player gains one Downtime Action they can describe how they use at the start of next Session or resolve it before then.

Downtime Action List

This list will compile a few of the most essential Downtime Action, their recommended skills and the suggested rewards based off of how many successes they get!

Downtime - Working

Working

Sometimes players just **need extra money** to fund their expenses and hobbies! Whenever a Trainer wishes to work during their Downtime, they must tell you how they work and it must be an established way they've made money in the past or a confirmed way they can make money.

The GM will then tell you what Skill it takes to perform this job. **The Income Value by default for all Trainers is \$300** but can be adjusted based on the perceived "Hourly Rate" of what the Player is Doing. If they're able to work for a high end restaurant as a waitress their rate may become \$600 instead! Or this could be a high end circus performance and they get \$800 as their Income Rate since it's a one time show.

This should vary based on what the Player can feasibly do at this point in the campaign so be sure to give them opportunities for higher rates of working! Be wary however that you don't make an income rate too high and they have more money than they know what to do with (You don't want them to make more money from Working compared to quest rewards, so make Working a source of extra income when they don't have enough or have a big money sink)

Recommended Skills

The Skill Check should be relevant to the work being done. If they're a bodyguard, Intimidate or Combat could work. If they're a charlatan or magician, Guile could work. If they're a Martial artist and tutoring for some kids, Command or Combat could work. If they're a Pokemon Caretaker, Pokemon Edu could work.

My Players want to do something not on the Downtime List!

Just make one up! At first, try to match their action to a listed one, especially if it's a mechanical fit. Then if not, either determine if it's a long term project or something that a single skill check could complete. Lastly, check the Modules to see if something more appropriate is there, because these are only the most generic types of actions that could apply to any setting. Then if you want to make it something custom, determine if it's something that can be done outside of the Downtime Phase or if it's something you want to give a bonus to.

Ex - A Trainer makes custom [Orders] through Innovation Action.

Example (Work Example) - A Trainer is part of Team Rocket and wishes to bodyguard a dangerous shipment in their downtime. Luckily it was only ambushed by some novice thugs and with 3 Successes in a Combat Check, the shipment was protected. The base rate for this job was \$500 so they ended up with \$3,000!

Example (Limited Opportunities) - A Trainer made their money by mining out rare ore which was their specialty, however they're in the middle of a Grassland encampment so they're unable to work as a Miner or even perform the action at all while in the wild.

Results (Based on # of Successes)

- 0** - They gain Money equal to 3x the Income Value and your Employers aren't pleased with your performance
- 1** - They gain Money equal to 4x the Income Value
- 2** - They gain Money equal to 5x the Income Value
- 3** - They gain Money equal to 6x the Income Value
- 4** - They gain Money equal to 8x the Income Value and improve a relationship with a NPC at their job
- 5+** - They gain Money equal to 10x the Income Value and improve a relationship with a NPC at their job

Downtime - Training

Training

Sometimes players will want to **train and exercise**, either with their Pokemon or training their own **physique**. Whenever a Player wants to Train, they either designate themselves or a number of Pokemon they're allies with to Train equal to half of their Command Rank (Rounded Down).

As for rewards, the trained Pokemon or Trainer will recover **Spirit Points!** A Character can have a Maximum of 3 SP at a time. For further info on SP, there is a section in an earlier chapter for their full usage.

Lastly, whenever a Pokemon is Trained, you may do the following:

- » Swap any Attacks between their Battle and Known Attack List.
- » Raise them up to 20 Levels, provided they don't exceed your Max Pokemon Level

Recommended Skills

The Athletics or Combat if a Trainer is Training, Command or Pokemon Edu if they're training a Pokemon. If a Trainer has a specific Training method you may allow other Skills such as training via meditation.

Example (Pokemon Training) - Trainer is letting their Hitmonchan spar against some other Pokemon. He performs a Command Check and gets 2 Successes. This allows them to bond a little and during their next combat they will be hyped and ready to fight.

Example (Trainer is Training) - One Trainer is deciding to calm down before a gym and go to their dojo and meditate in peace to refresh their mind. They perform a Focus Check and get 4 Successes, leading to restoring their SP to 3.

Results (Based on # of Successes)

- 1 or Less** - The Trained Pokemon or Trainer gain +1 SP.
- 2 or 3** - The Trained Pokemon or Trainer gain +2 SP.
- 4 or 5** - The Trained Pokemon or Trainer gain +3 SP.
- 6+** - The Trained Pokemon or Trainer gain +3 SP. SP gained this way can exceed the maximum limit of 3 SP per Character.

Downtime - Socializing

Socializing

Sometimes players want to **hang out with other NPCs or their Pokemon** and improve their relationships with others around them. Whenever a Player wants to improve their Bond with someone else, have them specify who they're socializing with. Then, have them tell you how they're socializing which will determine the Skill Check.

If your GM is using the Favor Points mechanic, this would be the primary way of gaining them.

Recommended Skills

Charm is the default Skill, however depending on how they socialize it may be different. Socializing by hiking may allow Nature Edu or Athletics. Socializing by dancing would instead be Acrobatics.

Example (Socializing) - An Trainer is attempting to obedience train his Tropius and improve their relationship who currently dislikes him. They try to reinforce the Tropius by feeding it fruits and teaching it orders. The GM determines this type of socializing would be a Command Skill. The Trainer is inexperienced, only having Untrained Command. He rolls 2 Successes resulting in a decent amount of improvement with their bond.

Results (Based on # of Successes)

- 0** - Their time spent together had some sort of unfortunate twist or something bad happened
- 1 or 2** - They spend some quality time together and had an overall good time.
- 3 or 4** - They had a great time and their relationship has gotten slightly deeper in some way
- 5+** - They had a great time and their relationship has gotten deeper in some way. Something good happened as well that provides some sort of benefit to the player.

Downtime - Crafting

Crafting

Sometimes players want to **create Items** from their learned recipes. Whenever a Player wants to craft items they know how to create, have them tell you which Item Recipes they want to make and assign a Skill for them to make a Skill Check in. It doesn't have to be a specific Item but it does have to be a specific category. For instance, if a Player is creating Potions, they can create both a Healing Potion and a Malady Potion during this action.

Lastly, the Player needs to spend Money or Ingredients based on how much they crafted. This can be determined by taking half of the Shop Price and applying it to each Item crafted or coordinating with your GM on how many resources it would take to make the Items requested.

Another thing to consider is that you may want a crafting project to be a **Long Term Project** if it's something complicated. For example, a Player making a Mega Stone could have the project be a TN 150 Occult Edu Project and at the end they craft one.

Recommended Skills

Relevant Education Skill associated with crafting the Item

Example (Small Crafting) - An Engineer wants to make some Pokeballs for the Party. They perform a Tech Edu and result in a 1 Success. Pokeballs cost \$500 in the store so he can make them for \$250 each. He can craft up to \$1000 of value so he can craft up to 4 Pokeballs, expending \$1000 in the process.

Example (Expensive Item) - An Armorer wants to make a Longbow (Fine Weapon) for an ally. It costs \$10,000 so it'll take \$5,000 in resources to create. He only gets 2 Successes, being able to craft up to \$2,000 in value. He subtracts from the Item's total cost, resulting in \$3,000 left. The downtime phase resolves with the Longbow being half finished and will be worked on later.

Example (Long Term Project) - A Player is creating a device that can disable an electronic lock, requiring a TN 50 Tech Edu as a Long Term Project.

Results (Based on # of Successes)

- 0 - The Player may craft Items up to \$500 in value.
- 1 - The Player may craft Items up to \$1000 in value.
- 2 - The Player may craft Items up to \$2000 in value.
- 3 - The Player may craft Items up to \$3000 in value.
- 4 - The Player may craft Items up to \$5000 in value.
- 5+ - The Player may craft Items up to \$5000 in value and they're efficient with their materials so they may craft up to \$1000 in value at no cost.

Granting Recipes

As a reward or possibly by spending money, a Player could be granted a Recipe, allowing them to create a new Item!

Example (Reward) - A Player forges a bond with a baker and is taught how to create Pokemon Food for their Axew. Over time the recipe also evolves and they can create Pokemon food for all Dragn Types.

Example (Research) - A Player borrows a book from the library that teaches them how to perform a ritual to Xerneas. After finishing the book, they gain a recipe for ritual materials.

Downtime - Innovation

Innovation

Sometimes players want to **discover and create something new**. Whenever a Player wants to innovate and create something new, they must specify what their goal is and gather all ingredients needed that are required by the GM to perform such a task.

Then, you must set a Target Number for how hard it is to create the Item they're intending to create, if it's even possible. Then inform them of the associated Skill for creating this Item. Before allowing them to innovate, make sure that it is something that you're fine with allowing to mechanically exist in your world and not something that would be unfeasible to create. Do not let people make snag machines in a world you don't want them to exist.

Innovation is a **Long Term Project** so refer to those rules and the example below

Example (Innovating a Cure) - An alchemist has found a Wartortle with a strange disease. They want to create an antidote for it however they don't even know what the disease entails so the Pokemon Researcher starts a Research Downtime Action in order to study the Wartortle.

Once they discover the negative effects and source of the disease, the alchemist starts to innovate a remedy which the GM determines is an Advanced Project with a TN of 100. However when the Progress Value reaches 70, they discover a makeshift remedy that they can craft that temporarily removes the effects of the disease for one scene. When they reach 100, they discover the recipe for the antidote and can craft it to cure them permanently!

Recommended Skills

Skill is based on the creation. For example, making a herbal remedy would be Medicine or Nature Education. Creating an anti-invisibility device would be Occult Edu. Making a custom Order for your allies would be Command or Pokemon Edu.

Downtime - Researching

Researching

Sometimes the Players want to **research something in the pursuit of gaining information**. Whenever Players want to Research or Study something, they must specify what they're studying. Then, you must set a Target Number of how hard it is to Research this and associated Skill for researching the topic.

Researching is a **Long Term Project** so refer to those rules and the example below

Recommended Skills

Associated Education Skill or Focus. For example, researching an ancient runic language would be General or Occult Edu. Researching what medicinal properties an unknown plant would have is a Nature Edu or Medicine Edu Check.

Example (Resarching) - The Party finds a strange relic in the Ruins of Alph that nobody has ever seen before with unown hieroglyphics on a tablet. The GM sets the TN at 100 and a milestone when they reach 50. The party is full of low level trainers so there is little way they can research it all soon but one trainer is interested in the occult and has Adept.

When he's first able to, he spends the first Night Time Phase and half of Midnight obsessing over the relic, even using an Exertion Modifier! His first roll is 14 from Night Phase Action. The Midnight Phase Action results in a 13 and the roll from Exertion results in an 8. The final result leads to a 35 but in the process he gets a Bane to all Mind Skills during the next day. He gains some momentum but feels burnt out and doesn't study it until a bit later. Later down the line he gains more time to study and gets some help with a friend, increasing the Progress Value to 50 and gaining a clue since they met the 50 Milestone marker which unlocked a quest for them! Later again he starts researching and has their Progress Value reach 100, uncovering what the glyphs mean.

Downtime - Exploration

Exploration

Sometimes players want to **explore their surroundings** and **gain more information about where they are**. In this case, players can explore or scout with their free time. When a Player wants to explore or scout an area, they must tell the GM what area they wish to gain information about. The GM will then determine relevant Skill Check based on how they're exploring.

Recommended Skills

Perception if it's simply scouting or looking around. Stealth if they're hiding from potential threats. Nature Education if they're exploring the wild. Skill is based on the location. Could even be something like Charm to talk to locals to gain information about the area and flirt with those who pass by!!

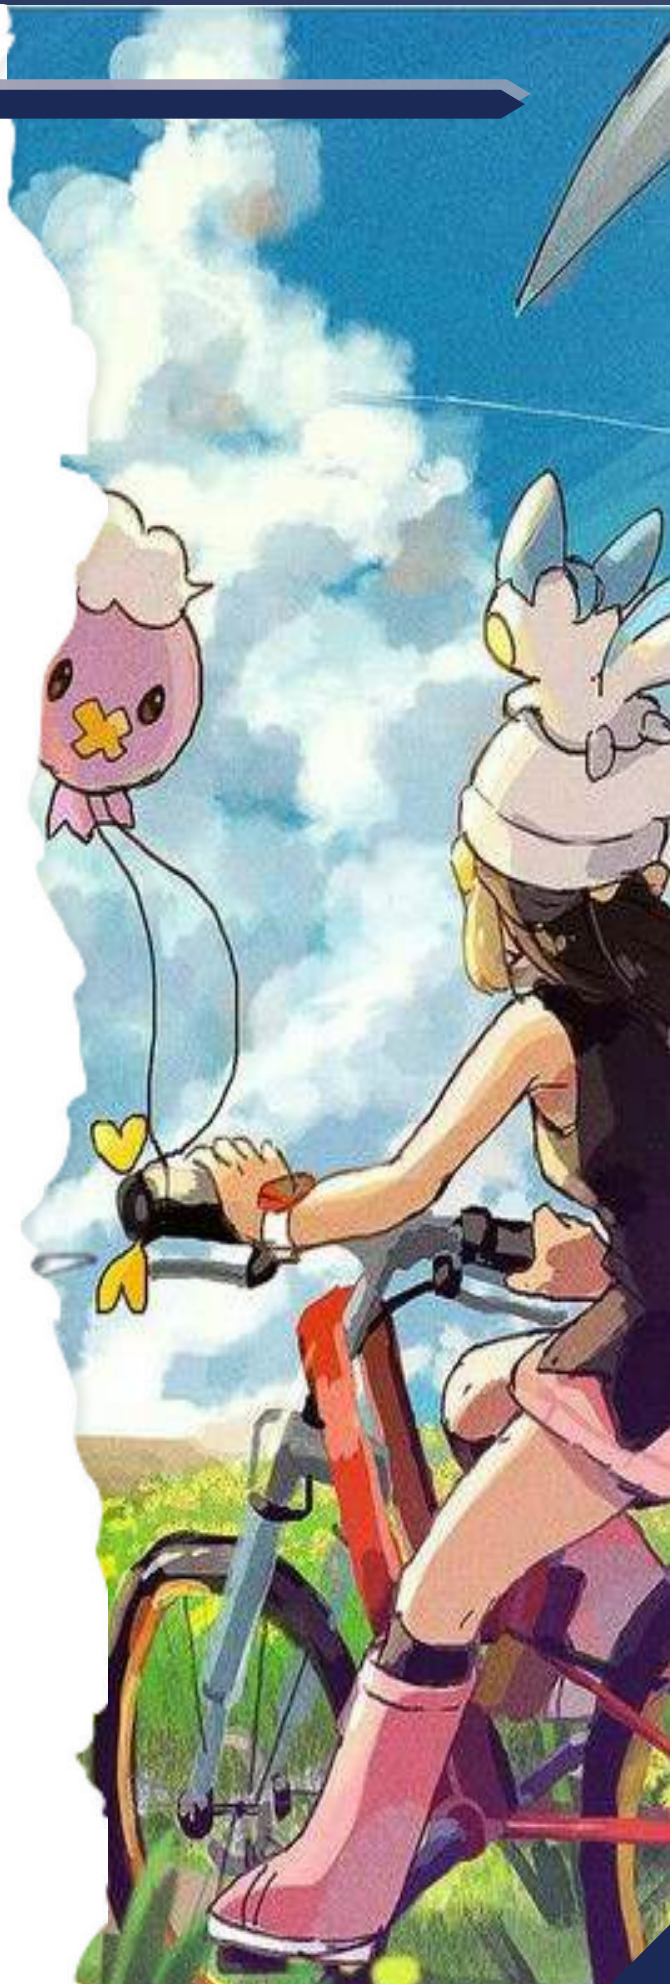

Example (Recon) - A Player is scouting a prison to observe the guard shifts and possible ways of entry. The area they're scouting from is fairly guarded so they'll suffer a Bane to the Check. Their Skill Check is Perception since they're far away. With one Success they could learn some info about how the guards are acting. If they 3+ Successes they could notice that they could infiltrate from a nearby building that isn't as secure and away from sight.

Example (Wild Exploration) - Another Player is scouting a nearby campsite. With 0 Successes and a failed Luck Check, they could be attacked by a stealthed predator while exploring. With 3 Successes they could find a small encampment of Mightyena nearby and while they're on the way back, they could notice a small cave with a den of teddiursa nearby!

Example (4+ Reward) - A Player is spending time walking around town, talking to the locals about a local town Myth, trying to gain information. With a 4+ they find someone who actually had first hand contact with the Mythological Pokemon, being able to direct them exactly to the site where they found it and describing in detail what happened to them. On 2 Successes they may have just gained brief information about it being in the nearby forest and some of its powers that the rumors suggest.

Results (Based on # of Successes)

- 0** - The Player is unable to find information about the intended location. Perform a Luck Check and if it was 10 or less, they suffer a setback as well.
- 1** - The Player finds a decent amount of information. Perform a Luck Check and if it was 5 or less, they suffer a setback as well.
- 2** - The Player finds a decent amount of information without being compromised.
- 3** - The Player finds all the information they were looking for and even learns something they didn't expect
- 4+** - The Player finds all the information they were looking for and notices something very interesting nearby or finds something that could help them.

Downtime - Questing

Questing

Sometimes players don't have a lot of time to focus on the smaller picture but they still **want to help out** those they've met along the way! Whenever a Player wants to go questing, this is treated as a mini-session of sorts. Anything that can happen "Off-screen" is possible here. Basically, anything you don't want to make a session around and waste time on it is something that's possible for Questing.

In order to go on a quest, the Player will offer what they want to do. **Unlike other Downtime Actions, this Skill Check will require a Challenge Rating** based on how difficult the Quest is. Depending on your Degree of Success, you'll get a result listed below. The GM can inform you of the potential rewards and risks before you embark on the Quest.

Recommended Skills

The relevant skill is entirely dependent on the Quest. If the quest is finding a Pokemon in an area, it could be Perception or Pokemon Edu. You could potentially do a Luck Check as well to simulate quests without a clear skill such as combat related ones, in that case set a Target Number and each interval of 5 determines an additional success.

Example (Find a Pokemon) - A Trainer determines that in their downtime while preparing for a mission they need a Magnemite to scramble the security system. This miniquest requires an initial Skill check of Poke Edu or Perception to find the Magnemite with CR of Standard (2). With 2 Successes, they find it. If they had 1 Success, they could've found it but it was hostile. If they had 0 Successes they could've been unable to find one. After they find it, another skill check is required to convince it to join with CR of Trivial (1) since it isn't hostile. The Player gets 3 Successes and the GM sets a little scene where they meet it and they bond a little.

Results (Based on Degree of Success vs CR)

Failed by 2+ - The Player did not succeed in the Quest and some complications arose. The quest's importance determines its severity.

Failed by 1 - The Player succeeds in the Quest, but some complications arose.

Met the CR - The Player succeeds in the Quest, gaining the baseline rewards that were stated.

Succeeded by 1 - The Player succeeds in the Quest, gaining a little more than baseline rewards. This could be a boosted bond, more money or finding a rarer thing.

Succeeded by 2+ - The Player easily succeeds in the Quest, gaining more than baseline rewards. This could be a boosted bond, more money or finding a rarer thing.

Item Keywords & Slots

Each Trainer has a total of **6 Inventory Slots** and **4 Equipment Slots**. Each Pokemon has a total of **2 Equipment Slots**, however any Item they Equip must have the **[Pokemon]** Tag. Inventory Slots are reserved for their carry-on storage such as a backpack and Equipment Slots may only hold **[Equipment]** Items, symbolizing what the Character is wearing.

Inventory Slots are specifically for Items you are carrying on you that are not currently in usage but can be swapped at the holder's whim as a Swift Action. Their Effects are not applied as they are not "Equipped or Used" (Unless otherwise specified). For example, a Potion can be stored in an Inventory Slot in order for the Trainer to use later. Non **[Equipment]** Items within an Inventory Slot can however be used/activated using its listed Action or a Standard Action by default. A Backpack in an Inventory Slot cannot hold Items in it because it is not "Equipped". **You cannot have more than 12 Inventory Slots by any means.**

Alternatively, **Equipment Slots** are reserved only for **[Equipment]** Items and while they're in these Slots, they're considered to be Equipped and their effects apply. These Slots can have any **[Equipment]** Item occupying them, however you cannot have two **[Large]** **[Equipment - Weapon]** Items or two **[Large]** **[Equipment - Armor]** Items equipped at the same time. The Last restriction for these Slots is that **you cannot equip two of the same Item with the same effect.** They don't stack.

Remember that all Players should have a Storage area where they can keep Items they don't have equipped safely with an infinite limit.

Item Keywords

[Large] Items: Large Items take two Equipment or Inventory Slots.

[Medium] Items: Medium Items take one Equipment or Inventory Slot.

[Small] Items: Small Items take one Equipment Slot. Up to three Small Items can occupy one Inventory Slot.

Example: One Slot can have 3 Pokeballs in it. If you want to take 5 Pokeballs, this takes up 2 Slots, one with 3 Balls and one with 2.

[Resource] Items: Resource Items follow the same rules as **[Small]** Items but if a **[Resource]** Item occupies an Inventory Slot, you can have any amount of that Item (or its subtypes) in the slot for quantity.

[Trinket] Items: Trinket Items do not take an Inventory Slot and are always considered to be on hand for the owning Character. These Items tend to be Items of little or niche mechanical value that wouldn't be worth bringing on a Journey (But may be handy in a niche situation!), plot items that should always be carried but shouldn't penalize an Item Slot, or Items that are centric to a Character that would always be carried by them. Examples include a secret key, teddy bear or guitar. Trinket Items are always treated as Equipped, but may have a stronger bonus effect if they take an Equipment Slot.

Deck of Fate - This seems like an enchanted deck of playing cards. While this Item occupies an Equipment Slot, you gain the Metronome Attack and its Frequency is changed to EOT. **[Equipment] [Medium] [Trinket]**

[Equipment] Items: Equipment Items only have their Effects applied while they occupy an Equipment Slot. If they are disarmed, moved to an Inventory Slot or unequipped, their Effects are ignored. Equipment Items may also have the **Weapon or Armor** Tag. You can't have two Large Weapons or two Large Armor Items equipped at the same time. You can however have one Large Weapon and two other Small Weapons equipped! For example this could be a Rogue that carries a Large Spear but also has a Small Crossbow and Knife in their pocket.

[Pokemon] Items: These Items may also be equipped and used by Pokemon. Pokemon gain no effects from Items without this Keyword Tag.

[Throwable] Items: These Items can be expended with the Throw Maneuver and if the Maneuver hits, the Target has the Item's Effects applied to them.

[Consumable] Items: These Items are expended when they're used and can only be used one time.

Essential Items

All of the following Items are considered essential and always carried by the party. They do not take any Inventory Slots, similar to Trinkets and are always on hand when needed. As a GM you may adjust what you consider to be '**Essential**' based on your Party's circumstances. Your party does not need to spend money on any of this to consider it to be on hand, don't tax them for rations.

» Tech like Pokedex, Party Pokeballs, Phone, Money, Water and Rations, Basic Baggage, Towels, Clothing, Water Filter, Lighter, Collection Jars.

Creating Items

Part of the fun of being a GM is creating new and unique Items, so here are a few considerations when making your own.

1. Be careful of the Power Level of custom Items and Trinkets

It is fine if you have custom Items require Inventory Slots to bring, especially if they're niche in usage. If you do create Trinket Items, have them be in one of two categories. The first category is **fluff heirlooms**. This could be a family crest that has no other effect other than being ID for a noble family. It could be a scarf given by a character's mother. It could even have small effects like the crest giving a +2 to Command Checks as their family has notoriety. The second category is **plot devices**. This could be a magic orb that allows the Party to communicate to Yveltal. This could be a parcel or package meant to send to a professor. This could be a Zygarde Cube that holds cells they're collecting. Basically if it would feel bad to need to waste a slot on it, make it a Trinket. If any of the items have vast mechanical effects, such as a guitar weapon being blessed by Meloetta and giving Sound Lance, they should take an Inventory Slot.

2. Make sure all Players have equal access

The power level of your Party is fine at any level provided you give them appropriate challenges and there's no inequality in access. All Players should roughly have the same amount of special or altered items so there's no feelings of favoritism.

3. Use existing Items as frameworks for new Items

If you're making a new weapon, use an existing weapon as an example or equivalent of power. This goes for anything customly created such as being given a custom move to a character's starter pokemon.

4. Grant the Item Keywords based on its usage

Let's say your Party is performing a heist. What they know is that they need to carry a lot of items out but they also want to be prepared and bring in necessary healing supplies to deal with whatever is inside. One member of the party decides that instead of bringing his weapon, he'll be a pack mule and carry an additional backpack for more storage space. However, he already is wearing a backpack and using his Armor Slot! Not to worry, the GM is flexible and will allow them to carry it in their Weapon Slot, granting it the [Equipment - Weapon] Keyword, so now he's carrying 2 Backpacks! Though as a tradeoff, he's weaker in combat and may be slower if he's carrying a lot. Alternatively you could fluff it is a big storage box he's carrying.

Basic Items

Item name

Price

Pokedex	\$10,000
Pokeball	\$500
Basic Pokefood	\$200
Typed Pokefood	\$500
Pokepuff	\$500
Ingredients (Basic)	\$100
Basic Healing Potion	\$250
Greater Healing Potion	\$500
Basic Malady Potion	\$250
Greater Malady Potion	\$500
Basic Strength Potion	\$250
Greater Strength Potion	\$500
Basic Vitality Potion	\$250
Greater Vitality Potion	\$500
Shard	\$200
Simple Poultice	\$100
Greater Poultice	\$300
Hazard Bag	\$250
Trap Set	<i>Varies by Effect</i>
Tent	\$2,000
Sleeping Bag	\$1,000
Artificing Kit	\$2,000
Artisan Kit	\$5,000
Climbing Kit	\$2,000
First Aid Kit	\$3,000
Tool Kit	\$2,000
Travel Set	\$2,000

Pokedex

Effect: While in your Inventory, whenever the User performs the Analyze Maneuver, they gain a Boon to any Pokemon Edu Checks they perform as a result. As an Extended Action, the User may Target a Pokemon within 10m with the Pokedex and scan them. Scanning takes a Minute and provides basic information about the species such as Attacks known, diet, habitat, height, ability list, etc. This Item may have additional functionality at your GM's Discretion. **[Medium]**

Note: Pokedexes are typically given out at the start of the journey but they may lead to Poke edu Rolls mattering less.

Pokeball

Effect: You may Target either a willing Wild Pokemon or an unconscious Wild Pokemon and expend this Item in order to capture them. Once captured, this becomes an Essential Item while the Pokemon is in your Party. A Trainer may by default have up to 3 Pokeballs carried as Essential Items at a time to consist of their carried Pokemon/Party. **[Small] [Consumable]**

Note: Pokeball Items should only take an Item Slot when they're empty. Don't let people carry 8+ Pokemon in their Party.

Basic Pokefood

Effect: If expended with a Throw Maneuver, choose an unoccupied Space for the food to land. All Enemy Pokemon within 3m of it must pass a Focus Check with a Tough CR (3). If any fail, one of them will use their next Standard Action to move to that space and eat it. If it wouldn't make sense to logically move there (Such as being on a hazard), or the Pokemon has been tricked before in this Scene, the CR is reduced at GM Discretion. **[Throwable] [Small] [Consumable]**

Note: Pokemon may tend to only fall for bait once. Don't let players throw a bunch of food at a boss and prevent it from ever attacking.

Typed Pokefood

Effect: Upon this item's creation, choose a Type. If expended with a Throw Maneuver, choose an unoccupied Space for the food to land. All Enemy Pokemon within 3m of it must pass a Focus Check with a Tough CR (3). Pokemon that match the chosen type have a Bane to this Check. If any fail, one of them will use their next Standard Action to move to that space and eat it. If it wouldn't make sense to logically move there (Such as being on a hazard), or the Pokemon has been tricked before in this Scene, the CR is reduced at GM Discretion. **[Throwable] [Small] [Consumable]**

Pokepuff

Effect: When expended, choose a Pokemon. The next time they're Socialized with as a Downtime Action, add 1d6 to the roll (This may exceed 6d6). A Pokemon cannot be under the effects of more than one Pokepuff at a time. This Item also has the effects of Basic Pokefood. **[Consumable] [Small]**

Note: This can be an easy way to bond with most Pokemon.

Ingredients (Basic)

Effect: When created or noted down by a Player, designate what type of Items can be crafted using this item. Each 1 Ingredient can be expended to craft up to \$100 worth of Items in the designated category. **[Resource]**

Note: This could be a good reward item to sprinkle around in the wild. Buying Ingredients allows Players to craft Items while they're Journeying. While normally you can craft with pure money as it's stated as just going to a nearby store to buy necessary items, sometimes Players are away from those resources.

Ex: Ingredients (Tech Scrap) / Ingredients (Food)

Basic Healing Potion

Effect: Choose one of the following Effects to apply to the Target. A Combatant cannot be Targeted by a 'Healing Potion' more than once per Scene.

[Throwable] [Small] [Consumable]

- » They restore 3 Ticks of Hit Points or 50 HP, whichever is higher.
- » They are cured of 1 Status Affliction of your choice.
- » They are revived and set to 1 Tick of Hit Points or 20 Hit Points, whichever is higher.

Greater Healing Potion

Effect: Choose one of the following Effects to apply to the Target. A Combatant cannot be Targeted by a Healing Potion more than once per Scene.

[Throwable] [Small] [Consumable]

- » They restore 5 Ticks of Hit Points or 100 HP, whichever is higher.
- » They are cured of 2 Status Afflictions.
- » They are revived and set to 3 Ticks of Hit Points or 50 Hit Points, whichever is higher.

Note: Don't let these be common until Trainer Level 5+

Basic Malady Potion

Effect: Basic Malady Potions come in different variations which are determined by the GM. The Target hit by this Item gains the chosen Status Affliction. Basic Malady Potions can inflict the following Afflictions. Burned, Poisoned, Enraged, Entranced, Suppressed, Wounded. **[Throwable]**

[Small] [Consumable]

Example: A Molotov Cocktail would be a Basic Malady Potion (Burned)

Greater Malady Potion

Effect: Greater Malady Potions come in different variations which are determined by the GM. The Target hit by this Item gains the chosen Status Affliction. Greater Malady Potions can inflict the following Afflictions. Chilled, Paralyzed, Cursed, Dazed.

[Throwable] [Small] [Consumable]

Example: A Dark Elixir could be a Greater Malady Potion (Cursed)

Note: Don't let these be common until Trainer Level 5+

Basic Strength Potion

Effect: Basic Strength Potions come in different Variations which are determined by the GM. Attack, Special Attack, Critical Hit or Accuracy may be chosen. If it is Attack or Special Attack, the Target gains +2 CS in that Stat. If it is Critical Hit or Accuracy, they gain a +2 Modifier to that Combat Value for the rest of the Scene. **[Throwable] [Small] [Consumable]**

Example: A Protien Potion could be a Basic Strength Potion (Attack) and boost their CS.

Greater Strength Potion

Effect: Greater Strength Potions come in different Variations which are determined by the GM. Attack, Special Attack, Critical Hit or Accuracy may be chosen. If it is Attack or Special Attack, the Target gains +3 CS in that Stat. If it is Critical Hit or Accuracy, they gain a +3 Modifier to that Combat Value for the rest of the Scene. **[Throwable] [Small] [Consumable]**

Note: Don't let these be common until Trainer Level 5+

Basic Vitality Potion

Effect: Basic Vitality Potions come in different Variations which are determined by the GM. Defense, Special Defense, Evasion or Save Checks may be chosen. If it is Defense or Special Defense, the Target gains +2 CS in that Stat. If it is Evasion, they gain a +3 Bonus to Evasion for the rest of the Scene. If it is Save Checks, they gain a +2 Modifier to that Combat Value for the rest of the Scene. **[Throwable] [Small]**

[Consumable]

Example: An X Defend could be a Basic Vitality Potion (Defense)

Greater Vitality Potion

Effect: Greater Vitality Potions come in different Variations which are determined by the GM. Defense, Special Defense, Evasion or Save Checks may be chosen. If it is Defense or Special Defense, the Target gains +3 CS in that Stat. If it is Evasion, they gain a +6 Bonus to Evasion for the rest of the Scene. If it is Save Checks, they gain a +4 Modifier to that Combat Value for the rest of the Scene. **[Throwable] [Small]**

[Consumable]

Note: Don't let these be common until Trainer Level 5+

Shard

Effect: A Shard can be expended as a Free Action in the user's Inventory upon hitting a Damaging Attack that corresponds to an associated Type to increase its Damage Base by +3. The user may only expend one Shard per Attack. A Shard can come in any of the following colors and has the associated Types.

Red (Fire, Fairy, Psychic), **Orange** (Normal, Fighting, Dragon), **Yellow** (Electric, Rock, Steel), **Green** (Bug, Grass, Ground), **Blue** (Flying, Ice, Water), **Violet** (Dark, Ghost, Poison). **[Small] [Consumable] [Pokemon]**

Simple Poultice

Effect: Choose one of the following Effects to apply to an Adjacent Target. **[Small] [Consumable]**

- » They restore 2 Ticks of Hit Points or 50 HP, whichever is higher.
- » They are cured of 1 Status Affliction of your choice.

Note: Unlike Potions, these can be applied multiple times but can't revive Combatants.

Greater Poultice

Effect: Choose one of the following Effects to apply to an Adjacent Target. **[Small] [Consumable]**

» They restore 4 Ticks of Hit Points or 100 HP, whichever is higher.

» They are cured of 2 Status Afflictions.

Note: Don't let these be common until Trainer Level 5+

Hazard Bag

Effect: When this Item is created, the GM will determine what type of Hazard it is (It can contain any Attack with the Hazard Keyword). When this Item is expended, the holder may use that Attack immediately as if they knew it. **[Small] [Consumable]**

Example: A Caltrop bag with the Attack Spikes, or a poisonous one with Toxic Spikes, or an Hazard Bag fluffed as a Smoke Ball which contains Smokescreen.

Trap Set

Effect: When this Item is created, designate a Target that it is designed to Trap and the Effects upon the Trap Triggering. This Item may be expended as a Downtime Action to set the Trap. A Luck Roll may be used to determine the success rate of the Trap or it may be an opposed Check of the Target to detect the Trap when relevant. **[Medium] [Consumable]**

Example: A Trainer setting traps for Pokemon that would ambush them at night to impair the would be ambushers. Something of this magnitude would cost \$500. Another Trap could be putting a magic trap on a book so what whoever reads it triggers it. This may cost around \$3000.

Tent

Effect: While you're on a Journey, you may use this Item to get a normal night's rest. Up to 2 people may fit in one tent. **[Large]**

Sleeping Bag

Effect: While you're on a Journey, you may use this Item to get a normal night's rest. Only 1 person may rest in this. **[Medium]**

Artificing Kit

Effect: As a Downtime Action you may perform an Occult, Nature or Tech Edu Skill Check. If an area would be less likely to find shards, perform it with a Bane. If it would be more likely to find shards such as in a cave, perform it with a Boon. For each Success, you find a Shard Item. Whenever you gain a shard this way, roll a d6 to determine the color. 1 is Red, 2 is Orange, 3 is Yellow, 4 is Green, 5 is Blue, 6 is Violet. **[Medium]**

Artisan Kit

Effect: When buying this Item, choose a Topic. Whenever you Innovate or Research during a Downtime Phase and use an Exertion Modifier, if it's for something that is related to this Topic, you reroll all dice that land on a 1. **[Large]**

Example: An Alchemy Kit for making new potions, Chemistry Kit for making altered potions or a Fashion Kit to innovate custom Clothes.

Climbing Kit

Effect: While this Item is in your Inventory, you do not need to make any Skill Checks in order to climb or scale vertical surfaces such as a slope. This may be equipped as if it were an [Equipment- Weapon] Item in order to ignore Movement Penalties from vertical surfaces that would be Slow Terrain. **[Medium]**

First Aid Kit

Effect: The user is considered to have standard medical supplies that can stabilize injuries out in the field. As an Extended Action with around 5 Minutes of time, anyone with at least Adept Medicine Edu can cure any Physical Status Affliction. While this is in your Inventory, at the end of a Scene where Combat Occurred, the user and all Allies restore 3 Ticks of Hit Point. Multiple instances of the First Aid Kit or Mender Capability increase the Ticks restored by +1, instead of each separately restoring 3. **[Medium]**

Tool Kit

Effect: Upon this Item's Creation, choose a specific type of Action. This Item has the tools required to perform that Action and when making Skill Checks involved with that Action, you have a Boon. This cannot affect Skill Checks performed as a Downtime Action. **[Medium]**

Note: You could also allow certain Tool Kits to be needed in order to do Downtime Actions such as a chemistry set for Innovation, however don't let it improve their Skill Checks.

Example: Lockpicking Kit (Picking Locks), Culinary Kit (Making Food), Mining Kit (Precise Excavation), Fishing Kit (Fishing in Wild), Navigator Kit (Tracking or Navigation), Potion Kit (Making Potions)"

Travel Set

Effect: Upon this Item's Creation, choose a type of Item that can be crafted. While this Item is in your Inventory, you have the tools to perform the Crafting Downtime Action while on a Journey. You need Ingredients equal to the Crafting Cost in order to create it. **[Medium]**

Example: Cooking for food items, Artificing for Artificer Items, Engineering for Pokeballs, etc.

Weapons [Training, Simple...]

Effect: To determine the Effects and Size of this Weapon while Equipped, refer to the "Creating Weapon Item's Section in the Core Book. **[Medium or Large] [Equipment - Weapon]**

Note: "If the Weapon purchased is Medium, it is half of the listed price. Players can also upgrade an existing Weapon to the next Tier in order to add things to it, and if they do apply a discount.

Braced Shield

Effect: While Equipped, whenever the User uses a Defend Maneuver, the Target has Damage Reduction equal to your Tier Value for the duration of the Maneuver. If the Target is no longer Adjacent to you, they do not benefit from this Effect. **[Medium] [Equipment - Weapon]**

Heavy Shield

Effect: While Equipped, whenever the User uses a Defend Maneuver, the Target has Damage Reduction equal to your Tier Value for the duration of the Maneuver. If the Target is no longer Adjacent to you, they do not benefit from this Effect. Additionally, while Equipped, you may use a Swift Action to gain Damage Reduction equal to your Tier Value for a Full Round. You must be at least Level 5 to equip this item. **[Large] [Equipment - Weapon]**

Ranger Styler

Effect: Outside of Combat, whenever a Pokemon would be in a state where they could be Captured by a Pokeball, you may use this Item to cause them to become a Companion. While Equipped, as a Standard Action you may Target an Enemy within 5m and perform a Command or Charm Check opposed by their Focus. If they fail, choose one of the following Effects to apply: **[Medium] [Equipment - Weapon]**

- » **Guard Break** - The next Attack that Targets them ignores Evasion.
- » **Pacify** - During their next Turn, the Target's Damaging Attacks are resisted by an additional step.
- » **Restrain** - Until the end of their next Turn, the Target either becomes Trapped by an Ally or Yourself or has their Movement Value halved. The Ally must be within 3m of the Target to be Trapped.

Note: If a Trainer starts as a Ranger Class, give them this.

Bardic Instrument

Effect: When this Item is created, choose two of the following Attacks to apply to it. While this Item is equipped, the User may use those Attacks. If this Item is Large, instead choose three. **[Large or Medium] [Equipment]**

Options are: Heal Bell, Sing, Screech, Sonic Boom, Supersonic or Metal Sound"

Note: Small costs \$3,000 | Large costs \$5,000

Crude Armor

Effect: While Equipped, the user has +5 Damage Reduction. **[Medium] [Equipment - Armor]**

Light Armor

Effect: While Equipped, the user has +10 Damage Reduction. You must be at least Level 5 to equip this item. **[Large] [Equipment - Armor]**

Note: These Armor Items are a template for all Armor Types.

Example: Battlemage Light Armor

Effect: While Equipped the User has 10 DR and +1 to Effect Ranges

Heavy Armor

Effect: While Equipped, the user has +10 Damage Reduction and their Defense CS their Default CS Value set to +1. While Equipped, the User has their Default Movement Value lowered by -2. You must be at least Level 10 to equip this. **[Large] [Equipment - Armor]**

Arcane Armor

Effect: While Equipped, the user has +10 Damage Reduction and their Special Defense Default CS Value is set to +1. While Equipped, the User has their Default Movement Value lowered by -2. You must be at least Level 10 to equip this. **[Large] [Equipment - Armor]**

High Quality Light Armor

Effect: While Equipped, the user has +10 Damage Reduction. You must be at least Level 15 to equip this. **[Medium] [Equipment - Armor]**

High Quality Heavy Armor

Effect: While Equipped, the user has +20 Damage Reduction. You must be at least Level 15 to equip this. **[Large] [Equipment - Armor]**

Light Backpack

Effect: While Equipped, the user has 2 more Inventory Slots. You can only put [Small] Items in this Inventory Slot. If this Item is Impaired, you cannot access any Items within these Slots. **[Medium] [Equipment]**

Note: This Item may be fluffed as any sort of storage device one would wear such as a suitcase or purse. If your Party plans on gathering items, put them in here!

Heavy Backpack

Effect: While Equipped, the user has 6 more Inventory Slots. You can only put [Small] Items in these Inventory Slots. If this Item is Impaired, you cannot access any Items within these Slots. **[Large] [Equipment]**

Seed Bag

Effect: As a Downtime Action, add 3 of the following Attacks to your Seed Bag or switch out any number of Attacks in the Bag with others listed Attacks. While Equipped, you may use the chosen Attacks as if they were on your Attack List. You cannot have more than 3 Attacks in your Seed Bag. If this Item is Impaired, you cannot use any Attacks granted this way. The Available Attacks are: Leech Seed, Burn Powder, Mystic Powder, Sleep Powder, Stun Spore, Poison Powder **[Large] [Equipment]**

Cargo Bag

Effect: While Equipped, the user has 4 Inventory Slots (Pokemon cannot use these Items). An adjacent Trainer may equip or use Items in these Slots as if they were in their own Inventory. Only Pokemon may equip this Item. Large Items cannot be put in these Slots if the user's size is Small. **[Large] [Pokemon]**

Example: A Gogoat carrying some spare supplies but it's at the cost of combat power!

Artisan Pack

Effect: As an Extended Action, choose a [Small] Item. While Equipped, you treat that item as if it had the [Resource] Keyword within GM approval. If this Item is Impaired, you cannot access any Items within these Slots. **[Medium] [Equipment]**

Example: An Ingredient Bag, Berry Bag, Seed Bag, Potion Belt or possibly a Utility Belt. A Potion Belt could only equip Items with "Potion" in their name.

Disguise

Effect: If this Item is [Small], while Equipped, anyone who performs a Skill Check to discern your identity has a Bane on it. If this Item is [Large], while Equipped, you also roll an additional 1d6 to Skill Checks related to your False Identity. **[Small or Large] [Equipment]**

Note: Price depends on the complexity of the Disguise. Should range anywhere between 2,000- 8,000.

Jewelry

Effect: This Item does nothing without being given an effect by the GM. **[Small] [Equipment] [Pokemon]**

Note: Jewelry such as a crown, ring or bracelet should be given magical effects depending on where they come from and their price should vary as such. Usually between 3,000 to 15,000.

Example: An Amulet of Frost that grants the wearer the Ice Beam and Aurora Veil Attack while equipped.

Stylish Clothes

Effect: Upon purchasing or crafting, the GM will declare what Skill this Item affects. If the Item is [Small], you gain a +1d6 while performing a Skill Check associated with that Skill, but cannot exceed 6d6. If the Item is [Large], you may also choose a Specialty as if you took the Skill Specialty Talent. While equipped, you have a Boon in that Specialty. This cannot affect Skill Checks performed as a Downtime Action. **[Small or Large] [Equipment] [Pokemon]**

Note: Small costs \$1,500 | Large costs \$3,000

Example: A Small Stylish Clothes could be a cute Scarf that increases Charm. A Large Stylish Clothes could be a Maid Dress that increases Charm and gives a Boon to any interaction with customers while working.

Survival Clothes

Effect: Upon purchase or crafting, the GM will declare a Naturewalk. While Equipped, the User has that Capability. **[Medium] [Equipment]**

Note: All possible Naturewalks are Ocean, Tundra, Desert, Urban, Grasslands, Forest, Mountain, Cave, Wetlands, and Space

Example: Flippers for Ocean Terrain or Snow Boots for Tundra.

Small Gadget

Effect: When this Item is created, the GM will determine what the effect of the Gadget is upon usage. If it grants a Capability, such as through the Tech Researcher Class, it lasts until the end of a Session or Scene, whichever is longer. **[Medium] [Consumable] [Pokemon]**

Note: Small Gadgets are meant to be temporary tools

Example: A Small Gadget could be an Oil Lamp that provides Glow but has a limited amount of fuel. It also could mean a Torch and nothing technical.

Analytic Lens

Effect: While this Item is Equipped, the User has +1 to Effect Ranges. **[Medium] [Equipment] [Pokemon]**

Large Gadget

Effect: When this Item is created, the GM will determine what the effect of the Gadget is upon usage. While equipped, the user benefits from the effects of the Gadget. **[Large] [Equipment] [Pokemon]**

Note: Large Gadgets are more sustainable and reusable.

Example: A Large Gadget could be a Mining Helmet that when worn provides the Glow Capability and can be reused.

Air Balloon

Effect: This Item may only be equipped by Small Pokemon. While this Item is equipped, the User is immune to Attacks with the Groundsource Keyword and gains the Flier Capability. **[Large] [Pokemon]**

Note: Don't let it pop. Let it be funny.

Assault Vest

Effect: While this Item is Equipped, the User gains a Tick of Temporary Hit Points whenever they're hit by a Physical Attack after Damage Calculations. **[Large] [Equipment - Armor] [Pokemon]**

Berserk Belt

Effect: While this Item is Equipped, whenever the User causes an Enemy to faint via a Damaging Attack, they gain +1 CS to Attack or Special Attack. **[Medium] [Equipment] [Pokemon]**

Blessed Relic

Effect: While this Item is Equipped, the User has +2 to Save Checks. **[Medium] [Equipment] [Pokemon]**

Covert Cloak

Effect: While Equipped, Attacks against the user have a -2 Penalty to Effect Ranges. **[Medium] [Equipment] [Pokemon]**

Dodge Scarf

Effect: While this Item is Equipped, the user has a bonus to Evasion equal to their Tier Level. As a Reaction + Movement Action, they may treat this bonus as Uncapped until the start of their next Turn **[Equipment] [Large] [Pokemon]**

Eject Module

Effect: This Item may only be equipped by a Pokemon. While this Item is Equipped, whenever the User is hit with an Attack, after Damage Resolution they may choose to be recalled as a Reaction, Free Action. Their Trainer may then send out a new Pokemon as a Free Action in the same spot the holder was. This cannot be used if the User fainted as a result of the Triggering Attack. **[Medium] [Equipment] [Pokemon]**

Focus Sash

Effect: While this Item is Equipped, the user has the Endure Attack added to their Attack List without taking a Slot. If the Endure Attack is used, the User's Positive Combat Stages are reset to their Default Value. **[Large] [Equipment] [Pokemon]**

Leftovers

Effect: While this Item is Equipped, as a Swift+Movement Action, the user may gain a Tick of Temporary Hit Points or restore a Tick of Hit Points **[Medium] [Equipment] [Pokemon]**

Lucky Charm

Effect: While this Item is Equipped, the User rerolls any Accuracy Roll that was a natural 1. **[Medium] [Equipment] [Pokemon]**

Pokemon Saddle

Effect: While this Item is Equipped, the user gains the Mountable Capability. This Item may only be equipped by Pokemon that are Medium Size or Larger and with GM Approval and it may only be equipped by Pokemon. If this Item is Impaired, anyone currently Mounting the user becomes unmounted and Tripped unless they pass a Standard CR (2) Acrobatics Check. **[Large] [Equipment] [Pokemon]**

Note: Saddles cost should be dependant on the Pokemon it's intended for.

Psionic Vest

Effect: While this Item is Equipped, the User gains a Tick of Temporary Hit Points whenever they're hit by a Special Attack after Damage Calculations **[Large] [Equipment - Armor] [Pokemon]**

Precision Lens

Effect: While this Item is Equipped, the User has +2 to Accuracy. **[Medium] [Equipment] [Pokemon]**

Quick Boots

Effect: While this Item is Equipped, the user has +2 to their Movement Value and may perform their Turn at the start of each Round, regardless of which Party goes first. If multiple Combatants would have this effect, perform a Luck Check plus your Speed to determine who goes first that Round, while the rest cannot apply this Effect. **[Medium] [Equipment] [Pokemon]**

Quick Claw

Effect: While this Item is Equipped, whenever the Dash Keyword is Activated by the user, Enemies that weren't Targeted cannot use Reactions against the Triggering Attack. **[Large] [Equipment] [Pokemon]**

Razor Claw

Effect: While this Item is Equipped, the User's Melee Attacks are treated as having the Pass Keyword. **[Medium] [Equipment] [Pokemon]**

Revenge Band

Effect: While this Item is Equipped, the User has +3 DB to Attacks that Target Enemies that Targeted them last Round. **[Medium] [Equipment] [Pokemon]**

Rocky Helmet

Effect: While this Item is Equipped, whenever the User is Targeted by a Melee Attack, the Attacker loses a Tick of Hit Points. **[Large] [Equipment - Armor] [Pokemon]**

Scope Lens

Effect: While this Item is Equipped, the User has +1 to Critical Hit Ranges. **[Medium] [Equipment] [Pokemon]**

Stat Booster

Effect: When this Item is created, choose a Stat other than HP. While this Item is Equipped, the User's Default CS Value for the chosen Stat is set to +1 CS. **[Large] [Equipment] [Pokemon]**

Note: Set. Not increased by.

Status Guard

Effect: When this Item is created, choose a Status Affliction. While this Item is Equipped, the User's is Immune to the chosen Affliction. If it were to be inflicted by a Boss, the user has to pass a TN 8 Save Check or else they become Afflicted by it **[Medium] [Equipment] [Pokemon]**

Example: A Ruby Heart to prevent the burned affliction.

Type Augmentor

Effect: When this Item is created, choose a Type. While this Item is Equipped, as a Swift Action, the User may change a Damaging Attack they know to become the Type of this Item for the rest of the Scene. **[Large] [Equipment] [Pokemon]**

Example: An Augment for Magmortar to blast Ice instead.

Type Booster

Effect: When this Item is created, choose a Type. While this Item is Equipped, the User's Damaging Attacks of that Type gain the Smite Keyword. **[Large] [Equipment] [Pokemon]**

Example: A Charm that empowers Ninetale's Fire Attacks.

Type Brace

Effect: When this Item is created, choose a Type. While this Item is Equipped, the User resists Attacks of that Type by an additional Damage Step. **[Large] [Equipment] [Pokemon]**

Example: Padding that weakens Fighting Attack impacts.

Note – Rewards & Treasures should tend to be unique to the setting and campaign

Treasure Items

Item name	Price
Ability Capsule	\$10,000
Book	<i>Varies by Topic</i>
Companion Ball	\$3,000
Elemental Catalyst	\$10,000
Elemental Enchantment	<i>Varies</i>
Elemental Essence	\$10,000
Evolution Stone	\$3,000
Fossil	\$3,000
Gemstone	<i>See Note</i>
Harnessed Attack	<i>Varies by Power</i>
Gym Badge	<i>Free</i>
Ingredients (Unique)	\$1,000
Mega Stone	\$20,000
Pokemon Egg	<i>Varies by Rarity</i>
Rare Candy	\$3,000
Terastral Crystal	\$20,000
Tutor Record	\$3,000
Z Crystal	\$20,000

Ability Capsule

Effect: When this Item is created, the GM will choose any Ability. When this Item is expended, choose a Pokemon you own. The Target may choose that Ability whenever they would be able to learn one, instead of one from their natural Ability List. **[Small]**

[Consumable]

Note: Be wary for balance level when handing this out. It's mean to enable odd combos and unique Pokemon, not break the system by giving Wonder Guard to Spiritomb. This can also be used with Attacks instead of Abilities if desired.

Example: A Mismagius gets an Ability Capsule (Sentry Units). These Sentry units are fluffed as illusions of Mismagius that populate the field.

Book

Effect: When this Item is created, the GM will determine the effect of the book and its associated Skill that is used to read it. This Item may be studied as a Research Downtime Action with the Target Number determined by the GM. When the Downtime Project is finished, the Player will learn the contents of the book, leading to either information gained or a permanent boost to your Character, such as gaining a Specialty as if they had the Skill Specialty Talent **[Small]**

Example: A Player finds a book on an ancient Unown Language which is a TN 100 Occult Edu book. When fully studied, the Player now is able to decipher objects that have this language.

Companion Ball

Effect: As an Extended Action, Target any Pokemon you own to become bound by the Companion Ball (Limit 1). While you have this Item in your Inventory, the Targeted Pokemon is considered to be in your Party, ignoring the Limit of 3 Pokemon in a Party. Pokemon bound by this Ball cannot be used in Combat in any way. You can only have one Companion Ball in your Inventory at a time. At your GM's Discretion, this Item could provide some small benefit based on the Pokemon inside. **[Medium]**

Note: This is meant to enable small travel partners that you want to be with you but not necessarily be strong enough to battle.

Example: Misty's Togepi or Ash's Pikachu would be prime examples of this. If the GM wants to grant an Effect, while Togepi is in your Inventory, the user's Pokemon may use Metronome as if it were on their Attack list, but the Attack originates from Togepi.

Elemental Catalyst

Effect: When this Item is created, the GM will choose a Type. When this Item is expended, Target a Willing Pokemon. The Target becomes a Type Shift of the listed Type and follows the rules under that section to guide how they're altered. They may either choose to add the listed Type (If they only have one Type), or replace one of their existing types with the listed Type. **[Medium] [Consumable]**

Note: This Item can be fluffed to anything in your setting that would enable a Type to change. It could be a potion or a small emblem granted by Tapu Lele.

Elemental Enchantment

Effect: When this Item is created, the GM will choose an Attack. This Item may be expended to Target an [Equipment] Item and grant the chosen Attack. An Item can only benefit from up to two Attack this way. While an Item with an Elemental Enchantment is equipped, the holder may use the chosen Attack as if it were on their Attack List. If it is Damaging, it can also be used as if it were a Weapon Attack. **[Medium] [Consumable]**

Note: The Price varies on the strength of the Attack. Razor Leaf could only be \$2,000 while Flamethrower could be \$5,000 and Draco Meteor could be \$10,000.

Example: A Cloak of Illusions that has the Double Team Attack. A Blade of the Forest that has the Leaf Blade and Swords Dance Attack. A Mask of Mystery that grants the Hypnosis Attack.

Elemental Essence

Effect: When this Item is created, choose a Type. When this Item is expended, the Trainer who expended it gains the Elemental Affinity Talent for the chosen Type. (This Talent does not take a slot) **[Medium] [Consumable]**

Note: This is any item that would contain enough elemental energy to enable an Elementalist Class (See Path of Elementalistm)

Fossil

Effect: When this Item is created, choose a Pokemon Species. A person that has knowledge in the field of Paleontology may study this Item as an Research Downtime Action with a Downtime Subject of Poke Edu and a Target Number of 100. Once this project is completed, the Fossil may be restored to its former state, provided they have equipment to do so. The chosen Pokemon is hatched at Level 1 and if they aren't Rock Type already, may alter into a Rock Type Shift. **[Medium]**

Note: Fossils don't need to be limited to just the canon Fossils like Cranidos and Anorith

Example: A Party finds a Bronzor fossil that is Rock Type instead of Steel, having a body of Iron filled Stone rather than pure Steel.

Gemstone

Effect: This Item has no effect unless otherwise given one. Depending on its Rarity it will be given a cost it could sell for. Common Gemstones sell for \$1,000. Rare Gemstones sell for \$3,000. Very Rare Gemstones sell for \$5,000. **[Small]**

Note: Main point is to sell these as loot. This is a blanket item for stuff like Nuggets or Pearls.

Harnessed Attack

Effect: When this Item is created, the GM will determine what Attack is harnessed in this Item. The holder may expend this Item as a Standard action (Or Swift if they're using the Versatile Effect) to use the Attack as if it were on their Attack List. If the Attack is Damaging, they may also choose to treat their Offensive Stat as if it were Double their Tier Value.

[Medium] [Consumable]

Example: A Crystal that harnessed the power of a Thunderbolt, a heater that can use Overheat or a Pendant that can use Hurricane. The price should be around \$500 multiplied by the Attack's Tier Level.

You can also modify this Item to be treated as an [Equipment] Item and if you do, it removes the Consumable Keyword and allows them to use it once per Scene instead of its listed Frequency.

Gym Badge

Effect: When this Item is created, choose a Type. While Equipped, the user's Attacks that match the chosen Type gain a bonus to Accuracy equal to their Tier Level. When you use the Training Downtime Action on your Pokemon you may teach them a Tutor Attack that matches the chosen Type, however, only one of your Pokemon may gain an Attack this way at a time. **[Medium] [Equipment] [Pokemon]**

Note: This is just a sample effect. Gym Badges could do anything related to the Gym.

Ingredients (Unique)

Effect: When created or noted down by a Player, designate what type of Items can be crafted using this item. Each 1 Ingredient can be expended to craft up to \$500 worth of Items in the designated category. When an Item is created entirely with this Item, its effects may be altered based on the unique properties of this Item. **[Resource]**

Note: This is a great basic item to throw around due to enabling player creativity with what they can craft.

Example: A Player finds an Ingredients (Unique) fluffed as a frozen gold ore found in an Ice Mountain. This serves as an Ingredients Item for Weapons or Tech Items but if they use entirely this Item, the effect will have some cold related effect. The Player makes a sword with this that starts with an Elemental Enhancement (Frozen Claw)

Mega Stone

Effect: When this Item is created, choose a Pokemon and an Ability on their Dex List. While Equipped by a Pokemon, the user may shift into their Mega form as a Swift Action. When they do so, they gain +1 CS in a Stat of their choice, then gain the chosen Ability until the end of the Scene. The User may not shift into their Mega Form during the Turn they used a Damaging Attack and they cannot use a Damaging Attack for the rest of the Turn once they do shift into their Mega Form. **[Medium] [Pokemon]**

Note: This is temporary until the Book of Pokemon Gimmicks

Example: A Cameruptite could give Enduring Rage.

Pokemon Egg

Effect: When this Item is created, choose a Pokemon Species. At the end of each Game Day (A full set of time phases) and/or as a Downtime Action, roll 2d10 and grant the Egg that many Nurture Points. If you have at least Expert Pokémon Education, instead roll 4d10. When this reaches 100 Nurture Points, it hatches into a Level 5 Pokemon of that Species. **[Medium]**

Note: The cost of this is determined by how Rare the Pokemon is in your setting along with additional charges if it would hatch with a special quality. Common Pokemon would be \$500. Rare Pokemon would be \$2,000. Very Rare would be \$5,000. A special Quality would range from \$2,000 to \$5,000 extra depending on effect.

Rare Candy

Effect: A Trainer or Pokemon may expend this Item to gain +3 SP and may gain benefits as if they were Targeted by a Training Downtime Action **[Small] [Consumable]**

Note: Make sure this stays a "Rare" item so it isn't consistently accessible and they always have max SP.

Terastral Crystal

Effect: When this Item is created, choose a Type. While Equipped by a Pokemon, once per Scene as a Swift Action they may remove their current Typings and they gain the chosen Type until the end of the Scene. Any Attack on their Attacks on their Battle List that matched their lost Type may be shifted to the Type they changed to if desired. **[Medium] [Pokemon]**

Note: This is temporary until the Book of Pokemon Gimmicks Module is created.

Example: A Magnezone with a Fire Terastral would lose the Electric/Steel Typing and turn into Fire Type, possibly changing Thunderbolt to Fire Type.

Evolution Stone

Effect: This Item can be expended by Targeting a Pokemon who isn't fully evolved, but is within 10 Levels of reaching one of its evolutions. The Targeted Pokemon evolves, learns a Tier 1 Tutor Attack, then this Item is expended. **[Medium] [Consumable]**

Tutor Record

Effect: When this Item is created, the GM will choose in either a Tier or Type for this Record. When this Item is expended, the Targeted Pokemon may learn a Tutor Attack from their List that corresponds with the Type of Record this is. The Targeted Pokemon must comply with Tutor Rules in order to learn an Attack this way. **[Medium] [Consumable]**

Note: They could find a Tutor Record (Tier 1) or a Tutor Record (Fire) for example.

Example: A party comes across a Crystal that is a fluffed Tutor Record (Psychic). A power relic that is a fluffed Tutor Record (Tier 3).

Z Crystal

Effect: When this Item is created, choose a Type. While Equipped by a Pokemon, they may perform any of the following. Once per Scene as a Standard Action, they surge with Z-Energy and their next Damaging Attack of the chosen Type that hits has its Damage Base doubled. Up to twice per Scene as a Swift Action, the next Damaging Attack of the chosen Type they use has the Smite and Spirit Surge Keyword. **[Large] [Pokemon]**

Note: This is temporary until the Book of Pokemon Gimmicks Module is created.

Creating Weapons

Do you want to know what's crazier than making a Pokedex of 1000+ Pokemon? Making a Weapon Item List with every single item a Player may want. So instead of making a hyper niche rwby-esque scythe gunblade, PTE will provide you with the rubric for creating your own weapons. Whenever you create a Weapon or Purchase one, **all of the following criteria need to be met and answered.**

Example (Custom): I made a Weapon called Bane of the Leviathan. It is a Martial, Melee, and Medium Weapon that is Simple in Quality. For Keywords, since it is supposed to be a Dagger, I gave it [Blessed] and [Serrated]. The GM allowed me to have it Blessed against Dragon Types instead of Ghost considering it's the tooth of a Gyarados. For Weapon Attacks, I gave it Double Strike and Wounding Strike.

Example (Arcane): My Player wants a Magic Sword. This weapon is Arcane, Melee and Large that is Simple in Quality. For Keywords I gave it [Enchanting] and [Sharp]. For Weapon Attacks I gave it Beatdown and Arcane Fury.

1. What is the Weapon's Quality?

There are 4 Tiers of Weapons, each of which are listed below. Depending on what Tier the Weapon is, it determines how much this Weapon can have when being created.

Training Weapons

Training Weapons are the most basic of Weapons, only for beginners. Players should start with a Training Weapon if the Campaign involves Trainer Combat. Training Weapons require no Skills to be able to equip it but gain no Weapon Keywords. When created, **if it is [Medium]** you may grant it a Novice Weapon Attack based on what Keywords it 'would have' or other qualifiers. **If it is [Large]**, you instead gain two.

Simple Weapons

Simple Weapons are also basic but used for more serious combat and not just practice. Simple Weapons require the holder to be at least **Adept Rank in its Qualifying Skill** in order to equip it. When created, Simple Weapons gain one Weapon Keyword of its choice. **If it is [Medium]** you may grant it two Novice Weapon Attacks based on what Keywords it has. **If it is [Large]**, you gain two Novice Weapon Attacks, and you gain an Advanced Weapon Attack.

Fine Weapon

Fine Weapons are more refined and elegant weapons that most battlers would be delighted to have. Fine Weapons require the holder to be at least **Expert Rank in its Qualifying Skill** in order to equip it. When created, Fine Weapons gain two Weapon Keywords of their choice. **If it is [Medium]** you may grant it two Novice Weapon Attacks and one Advanced Weapon Attack based off its Keywords. **If it is [Large]**, you gain two Novice Weapon Attacks, and you gain two Advanced Weapon Attacks.

Legendary Weapon

Legendary Weapons are either the highest class or have some significance that grant them great power. Legendary Weapons require the holder to be at least **Master Rank in its Qualifying Skill** in order to equip it. When created, Legendary Weapons gain two Weapon Keywords of their choice. **If it is [Medium]** you may grant it two Novice Weapon Attacks and one Advanced Weapon Attack and one Master Weapon Attack based off its Keywords. **If it is [Large]**, you gain Novice Novice Weapon Attacks, two Advanced Weapon Attacks, and two Master Weapon Attacks.

2. What are the Weapon's Categories?

Weapons consist of **three different Categories** that must be noted upon creation. Their **Type**, their **Range**, and their **Size**. Modules can expand the number of categories and keywords that a Weapon can possess, but here is the base list.

Weapon Type

There are **two different Types of Weapons**, **Martial** and **Arcane**. **Martial Weapons** can only deal Physical Damage and any Damaging Weapon Attack used through this Weapon has its Category changed to Physical. Typical examples could include a Sword, Dagger or Spear. **Arcane Weapons** are the reverse, only dealing Special Damage and causing their Damaging Weapon Attacks to become the Special Category. Typical examples could include a Tome, Spellbook or an Orb, but you could also have things like an Arcane Sword.

Weapon Range

There are **three types of Weapon Ranges**, each of which determine the Range of your Basic Attacks and Weapon Attacks wherever **WR** is listed. If a **Weapon is Melee**, its Attacks all shift to Melee Range and all Blasts turn to Close Blast, but the Damage Base of all their Attacks increase by +2. If it is **Short Ranged**, its Attacks

all shift to 6 Meters for its Range and Blast Turns to Ranged Blast. If it is **Long Ranged**, its Attacks all shift to 12 Meters for its Range and Blast Turns to Ranged Blast, however they cannot Target Adjacent Enemies with their Weapon Attacks.

Weapon Size

There are **two Weapon Sizes** which correspond to the Item's Size and how many Inventory Slots it takes, **Large or Medium**. Depending on the Weapon's Size, it grants different keywords and attacks or may even qualify for some Attacks!

3. What is its Qualifying Skill?

Whenever a Weapon is created, choose a Skill to become its Qualifying Skill. Depending on its Weapon Quality, the holder will need that skill at a certain Rank in order to equip and use this Weapon. For example a Fine Weapon requires the qualifying skill to be at least Expert Rank. Depending on certain Weapon attributes you can usually determine what skill it should have.

Martial Weapons

Combat should be its default Skill. Some weapons however can have alternate qualifying skills. For example, Heavy greatswords could require Athletics instead. A Dagger could require Stealth. A Rapier could require Acrobatics. A Bow could require Perception.

Arcane Weapons

Occult Education should be its default Skill. Some weapons however could have alternate qualifying skills based on its origin. For example, an Orb could require Focus. A Staff of the Forest could require Nature Edu. A Magitech Pistol could require Tech Edu.

4. What are its Keywords?

Each Weapon is able to gain Keywords to grant it effects, give it access to special Attacks and distinguish itself from other Weapons. These Keywords can be granted to any Weapon, regardless of its Categories, so feel free to fluff it however you want. A Melee Serrated Weapon could be an edged dagger while a Ranged Serrated Weapon could be barbed arrows.

[Ammo] - You start the Scene with 3 Ammo. Up to twice per Attack, As a Free Action you may use Ammo when using a Ranged Attack to grant it a bonus to Accuracy Rolls equal to your Tier Level for each Ammo expended. As a Swift + Movement Action when you have 0 Ammo, you regain 3 Ammo. **Ranged Weapons Only.**

[Barbed] - Weapon Attacks used through this Weapon have a 17+ Effect Range to cause their Target to become Slowed. If it already has a Slowed Effect Range, it is increased by +2. **Martial Weapons Only.**

[Blessed] - Upon this Weapon's creation, a Type is chosen. As a Swift Action, when the User uses a Weapon Attack on this Weapon against a Pokemon of the chosen Type, it is one step more effective against them. An example is a sword that is blessed against Ghost Types.

[Blunt] - Weapon Attacks used through this Weapon have a 17+ Effect Range to cause their Target to become Dazed. If it already has a Dazed Effect Range, it is increased by +2. **Martial Weapons Only.**

[Concealed] - The First Weapon Attack you use through this Weapon during a Scene treats all Targets as if they were Vulnerable against them. **Medium Weapons Only**

[Cursed] - This Weapon does not count towards the limit of Keywords per Item. While the Holder has this Weapon Equipped, a negative effect applies to them based on the Curse applied to this Weapon and GM Discretion. How this Keyword is removed is up to the GM discretion but likely can be researched as a Downtime Action.

[Defensive] - While Equipped, The user has a bonus to Evasion against Adjacent Attacks or Ranged Attacks equal to your Tier Level. Which one it applies to is chosen upon the Weapon's creation.

[Elemental] - Upon this Weapon's creation, a Type is chosen. As a Swift Action, when the User uses a Weapon Attack through this Weapon, it deals Damage as if it were the chosen Type.

Artist: @rebusalpe

[Enhancing] - All Weapon Attacks used through this Weapon gain a 15+ Effect Range to "Increase one Stat on the User by +1 CS". **Arcane Weapons Only**

[Extended] - Melee Weapon Attacks used this Weapon are instead treated as 2m. **Melee Weapons Only**

[Finesse] - Weapon Attacks used through this Weapon may have the Speed Stat used as an Offensive Stat instead of Attack, if desired. **Martial Weapons Only.**

[Homing] - Ranged Weapon Attacks used through this Weapon may ignore Blocking Terrain breaking line of sight. Whenever you use a Line Weapon Attack, it doesn't need to be a straight line and may be any path of connecting spaces. **Arcane Weapons Only.**

[Life Stealing] - Once per Scene as a Swift Action, when using a Damaging Weapon Attack through this Weapon, it gains the Drain Keyword.

[Mending] - As a Swift Action when using a Damaging Weapon Attack through this Weapon, all Targets do not take Damage. Instead, roll the Damage Roll based on the Attack's Damage Base, not including Damage Modifiers or Offensive Stats. All Targets restore Hit Points equal to the result. **Arcane Weapons Only.**

[Oversized] - The User may use any Weapon Attack through this Weapon as if it were a Full Action. If they do, it gains the Smite Keyword. If it already had the Smite Keyword it gains the Sureshot Keyword. After Damage Calculations, the User can't apply Speed or Bonus Evasion until the start of their next Turn. **Large Weapons Only.**

[Piercing] - Weapon Attacks used through this Weapon ignore half of the Target's Damage Reduction and on a 15+, Targets can't activate Attacks with the Shield Keyword against it. **Martial Weapons Only.**

[Serrated] - Weapon Attacks used through this Weapon have a 17+ Effect Range to cause their Target to gain the Wounded Affliction. If it already has a Bleed Effect Range, it is increased by +2. **Martial Weapons Only.**

[Sharp] - Weapon Attacks used through this Weapon have a Critical Hit Range of 18+. If it already has an extended range, increase it by +1. **Martial Weapons Only.**

[Shifting] - As a Swift Action, this Weapon changes from Melee to Short Range or Long Range, or from Short or Long Range to Melee or from Short Range to Long Range or vice versa. This Weapon has a set of learned Weapon Attacks while it's in Melee and a different set while it's in Ranged.

[Soulbound] - The owner of this Weapon always knows where it is at all times. If they have an empty Weapon Equipment Slot, As a Free Action they may have the Weapon appear in their hands and Equip it.

[Sundering] - On Martial Weapons, Weapon Attacks have a 15+ Effect Range to lower the Target's Defense by -2 CS. On Arcane Weapons, this instead lowers Special Defense.

[Throwable] - Melee Attacks on this Weapon may be used as if they had a Range of 6m and gains the Smite Keyword while used that way, however after you use it this way, the Weapon is unequipped and lands in a space adjacent to the Target.

Artist: @rebusalpe

5. What Attacks will it Grant?

Each Weapon can gain access to Weapon Attacks based on its Size and Quality (Listed in step 1). When a Weapon is created, look at the **Weapon Attack Tab** in the Attacks and Ability Reference Sheet in the following link. [Weapon Attack Index](#)

Weapon Attacks ▾

While looking at the list, see what attacks you're able to learn then pick which ones! In order to have a Weapon Attack be learned, the Weapon must meet any listed **Requirements such as mandatory Keywords**. For example, you can't take Backswing on a Sniper Rifle (Large Long Ranged).

Once you have all of your Attacks that are applied to the Weapon, you can alter their Range and Damage Base if necessary based on their Keywords or Range. Anything listed as **WT** is replaced with the corresponding **Weapon Type**, such as Physical for Martial. Anything that is listed as **WR** is changed to your **Weapon Range**. Damage Base is then modified if it's a Range like Melee.

Note: Weapon Effects only apply to Weapon Attacks granted by that Weapon or Attacks that are specified to be used "Through" this Weapon. If you're holding a Sundering Small Weapon and a Serrated Medium Weapon, Attacks granted by the Sundering one won't have the Serrated Effect.

Example (Simple Staff) - A Trainer is given a Staff of the Druids by their herbalist uncle in order to defend themselves in the wild. It is Simple Quality, which grants it two Novice Weapon Attacks and an Advanced Weapon Attack since it is [Large]. It is also an [Arcane] Weapon with the [Elemental] Keyword, allowing it to switch Attacks to the Grass Type.

It gains the following Weapon Attacks:

» Energy Blast, Rending Spell, Mystic Ward

Example (Legendary Bow) - A Trainer is gifted a Legendary Longbow as a gift for their servitude towards Xerneas. It is Legendary Quality, which grants it two Novice, Advanced and Legendary Attacks since it is [Large]. It is also [Martial] Weapon with the [Soulbound] and [Blessed] Keyword against Dark Types. As a plot reward, the GM also allows it to have the Moonblast Attack but switched to Physical Category as a Weapon Attack.

It gains the following Weapon Attacks:

» Salvo, Take Aim, Deadly Strike, Reckless Strike, Deadly Volley, Grand Rupture

Artist: @Magik_Jack_Art

Clarifying Rules

This section will be for miscellaneous rulings that I don't know where to put until things can be more streamlined to resolve issues.

1. Unless it specifies otherwise, always round down when halving values in this System.

2. When something specifies that it "Sets" the CS Value to a specific Value, it is treated as Increasing or Lowering the CS to that value. If a Pokemon is Burned and cannot increase their Defense CS, you cannot use an Effect that "Sets" their Defense CS to +2 CS because that would "Increase" it from its current value.

3. When an Effect has a timed duration and it is based on a specific Combatant, such as until the start of a user's next Turn or the end of their next Turn, the following case scenarios may occur which prevent a user's "next turn". Refer below on how to resolve it and remember that the GM may determine the approximate time in which an effect would expire regardless of rules.

If the User Faints - It instead resolves at the end of the round in which the fainted user did not act

If the User is switched out - it instead resolves at the Turn start (or end) of the combatant who replaced it.

4. At your GM's Discretion, you may choose to ignore mechanical facets of your Character when you do not wish to apply it. Some examples are as follows. You may choose to be automatically hit by an Attack and not apply Evasion if desired. You may choose to be affected by Electric Attacks if you would normally be Immune such as through Volt Absorb or a cinematic moment like how Onix was soaked with water and affected by Pikachu when Ash faced Brock.

This does not apply for ignoring negative parts of an Ability such as ignoring Contrary when you would have your Combat Stages boosted (And conversely decreased).

5. No Effect of the same name can Stack. Unless it specifies it can stack, no two effects with the same name can affect a combatant. You cannot get two abilities with the same name. You cannot have two Scope Lens equipped. You cannot benefit from two Helping Hands at the same time. There may be some exceptions based on GM discretion. Additionally, Items with the same name but different effects ignore this such as Two Type Boosters with different Types.

6. Anything that says its "Extends" Critical Hit Ranges or Effect Ranges counts towards the +6 limit of Effect Range and Critical Hit Modifiers that a character can have. They're essentially the same thing but worded differently for sake of grammar. Leaf Blade extending their Crit Range by +2 and changing from 17+ to 15+ counts as a +2 bonus to Crit Range toward their total of +6. If a Sceptile that uses Leaf Blade has its Critical Hit Range extended by +2, then has a +5 individual Critical Hit Modifier, then they can only apply +4 of their Bonus Crit Range towards that Attack.

7. If something is granted to an Attack, it only applies towards the first specified instance and isn't retained for the remainder of the Scene **unless specified**. If a Feature would say "When you meet this Trigger, this Attack gains the Sureshot Keyword", it only gains the Keyword for the Triggering instance, not for the remainder of the Scene. If a Feature would say "When you use a Rock Attack you can do a thing to change its type to Fire instead", this only applies to the Triggering Attack.

8. Restrictions cannot be bypassed by order of operation. If anything restricts you from doing something, some Players may add things in a certain order to "Rules as written" allow them to bypass the restriction. Enforcement of this rule falls down to GM Discretion and Rules as Intended instead of Rules as Written. Some restrictions are specifically written such as Versatile Attacks being unable to be used if they used a Damaging Attack before and preventing one from being used after. Others are more ambiguous such as being an Expert Rank that gets +1d6 to a Skill Check and another +1d6 where one modifier can bypass (6d6) and the other cannot. The order of operations should be coordinated and approved by your GM on a case by case basis to determine what they see as fair, as there is no right answer in ambiguous examples.

9. If an Effect with choices applies to multiple targets, you may choose a different choice for each target affected instead of just one choice applied to all of them. For example if all Targets in a Burst 2 gain +1 CS in a Stat, one Pokemon can get Attack while another gets Defense. If a Close Blast 2 Attack says the Target loses -2 CS in Defense or Special Defense, one target can lose defense while the other loses special defense.

10. As a rule of thumb, **whenever an Attack is modified by a source during a Scene**, it is treated as if it always had that change, but is not considered Natural. If an Ally uses Flamethrower and an allied Water Specialist uses Type Sync to make it a Water Type Attack, Flamethrower is now considered a Water Type Attack. This means it can no longer be affected by things that only a Fire Attack can Trigger, but it can Trigger things that a non-Natural Water Attack can Trigger. If a Pokemon uses a Melee attack through the Ranger Role, making it become 6, 1 Target, it cannot be affected by things reliant on it being a Melee Attack. Conversely, if an Attack is changed outside of a Scene in a permanent manner such as through the Signature Technique “Scattershot”, that changes the Natural qualities of the Attack. If a Trainer used this Technique on the “Hydro Pump” Attack, it is Naturally a 4, 2 Target Attack, not a Line 6 Attack, thus it cannot meet the trigger “When you use a Line Attack”. As a rule of thumb, all Triggers happen simultaneously, so if one trigger’s Effect would render another to be illegal to trigger, it must be one or the other. This can get confusing so the GM is allowed to rule in edge cases, don’t rules lawyer it.

11. **Players can ignore positive effects** at GM Discretion. For example, if an Attack has an AC and you’re targeting an ally it can auto hit them because they aren’t actively evading it. If an Attack would Slide them away 2m, they can choose to not apply the effect. If a Burn Effect would Trigger, you may choose for it to not apply.

12. When a Feature or Ability says something like, “The Triggering Attack’s Type is treated as if it were Water Type”, **this effect only applies to the instance of the Attack being used**. If they used that with Flamethrower, after the Attack resolves, it returns to being a Fire Type Attack. If a change were to persist beyond that one Attack it would say “For the rest of the Scene” or something along those lines. I’m not going back to the whole “Attack” vs “Move” debate.

PTE Roadmap

As of today, the list below contains each piece of content that is planned to be added in the future along with their priority level to implementation

HIGH PRIORITY

» **Server Staff** - During this Playtesting period, structuring the server, advertising for more interested players and organizing a team of staff, including moderators and developers, is one of the more crucial steps in these early phases, as right now there is a small "Official" Team. To anyone with TTRPG or Poke TTRPG experience, feel free to let us know your interest!

» **Playtest Feedback** - During PTE Version 1.0, we will be constantly monitoring feedback and general sentiment with the system. Playtest data will be compiled and the future balance patches will occur to reflect what changes are needed alongside smaller hotfix patches. If Classes would need reworks, instead of changing it immediately, we would compile them all into one balance update that is relatively infrequent.

» **Small Hotfixes** - Typos, minor quality of life changes and small adjustments will be the priority for now while modules are being made and larger reworks progress in the background.

» **VTT Implementation** - It is a high priority to add the PTE System to virtual tabletops such as Roll 20 and Foundry. We however are limited to the skillset of our development team and progress must wait until we have members that are capable of coding and have experience with these platforms. However, once we do, making the system playable on these platforms is a priority!

» **Module | Path of the Divine** - This Module will reintroduce Legendary and Mythical Pokemon that have powers beyond just normal Pokemon. It will include gifts that they can bestow, tiers of legendary strength, and ways to introduce legends as divine bosses. It will include methods of servitude and interacting with Legendaries in a divine manner, such as patronage or usurpation.

» **New Canon Content** - As soon as new game content comes out we will address it as soon as possible on whether or not it should be added to the system and how it'll be implemented. New Pokemon such as Legends ZA and Gen 10 will be rushed to immediate high priority as soon as it becomes available.

MODERATE PRIORITY

» **Module | Path of the Mundane** - This Module will cover how to run a Campaign without Trainer's being a Fighter in combat. These Campaigns will be more centric on the anime similarly to PTA and be solely Pokemon Support while Trainers are on the backline. The basis of PTE is that Pokemon Trainers contribute to the fight, usually physically, but this Module will enable Campaigns that do not have Trainers being a physically active combatant.

» **Module | Path of Artisanry** - This Module provides a much more in depth system of jobs and professions that can expand character depth and introduce systems that let Characters interact with economic aspects of their Character. GMs can use parts of this module that are relevant to their Players such as a Brewing system for an Alchemist or Archeology for a Paleontologist. This Module includes elements such as Breeding, Farming, Fossils, Fishing, Enchanting, Alchemy, etc.

» **Quality of Life & Automation** - Depending on what issues GMs run into, as a community we may attempt to alleviate them as much as possible. This may include translations if feasible, pokemon generators, creating digital assets, quicker statting process, and other tools that GMs or Players may benefit from. The streamlining will be consist but limited to our technical prowess.

LOW PRIORITY

» **Module | Path of the Eras** - This Module will cover any facet of a Campaign with relevancy based on the age its played in, primarily ancient past and distant future. Tech Education will gain many ways of being used as GMs can use this Module to do high tech campaigns and Players can be put to the test if they're thrown in an ancient world without modern technology such as the Pokeball. Classes and concepts will be introduced such as hacking, high tech weapons and even space travel or augmentation.

» **Module | Book of Pokemon Gimmicks** - This Module will cover all of the various Pokemon Gimmicks that have been added over the years and how to implement them into your Campaign. This includes Megas, Terastralizing, Z-Moves, Burst Pokemon, Contests, Shadow Pokemon, Totem Pokemon, Rangers, Dynamaxing, etc. As of right now they have temporary Items that can be implemented with GM nuance.

» **Actual Play Update** - Actual Play is not a major concern at the moment, however it is on our radar to someday polish the system so that it is easier to play via pen and paper. We highly recommend it be played digitally or using digital tools, however at this point we will focus on Player accessibility and make things easier for those who play in real life, such as consolidating dice values to more common dice, making printable assets such as physical Character Sheets instead of Digital ones, etc.

» **PTE 2nd Edition** - We currently are at a place where the System is playable, however there are a lot of aspects that were carried over from PTU that I would like to eventually change over time. The scope however is far too much to do all at once, considering how intertwined everything is. It would take months and possibly years to complete as a team of adults with lives of our own.

While a community is being built and other aspects of the system are tested, we will be figuring out possible ways to change fundamental parts of the system to improve it. This includes possibly the Skill System, Stats, Combat Math, Action System, and anything that is affected by those core factors. These changes will not change the design principles of PTE and it will still remain PTE in its soul.

This will always be slowly developed over time, but instead of not publishing the system until everything is remade from the ground up, we've decided to release what we have while the larger projects are chipped away at in the background. This way there isn't a major update every month that has to be relearned.

Credits

As the PTE System develops and expands, we'd like to take a moment to thank all the contributors to this project, listed below.

System Lead

Azurespider

System Developers

None

System Coders

Onarreshana | Thewonderwolf | Starshine

Community Moderators

TBD

Version Notes

The history of all versions of PTE will be recorded in this document [here](#). < Just click the link.

The top of the document will have the most recent versions of PTE and the further you go down it has the changes that occurred in the older versions. It will also document the full list of changes each time a version change would occur.
